*List of Contributors, xiii*

*Preface, xviii*

## **1. Updates on Metabolism in Lactic Acid Bacteria in Light of “Omic” Technologies, 1**

Magdalena Kowalczyk, Baltasar Mayo, María Fernández,  
and Tamara Aleksandrak-Piekarczyk

- 1.1. Sugar Metabolism, 1
    - 1.1.1. Practical Aspects of Sugar Catabolism, 3*
  - 1.2. Citrate Metabolism and Formation of Aroma Compounds, 4
    - 1.2.1. Citrate Transport, 4*
    - 1.2.2. Conversion of Citrate into Pyruvate and Production of Aroma Compounds, 6*
    - 1.2.3. Conversion of Citrate into Succinate, 6*
    - 1.2.4. Bioenergetics of Citrate Metabolism, 6*
  - 1.3. The Proteolytic System of Lactic Acid Bacteria, 6
    - 1.3.1. Protein Degradation, 7*
    - 1.3.2. Peptidases, 8*
    - 1.3.3. Technological Applications of the Proteolytic System, 10*
    - 1.3.4. Amino Acid Catabolism, 10*
  - 1.4. LAB Metabolism in Light of Genomics, Comparative Genomics,  
and Metagenomics, 12
  - 1.5. Novel Aspects of Metabolism Regulation in the Post-genomic Age, 12
  - 1.6. Functional Genomics and Metabolism, 16
    - 1.6.1. Transcriptomics, Proteomics, and Metabolomics, 16*
    - 1.6.2. Global Phenotypic Characterization of Microbial Cells, 17*
  - 1.7. Systems Biology of LAB, 17
- Acknowledgments, 18
- References, 18

## **2. Systematics of Lactic Acid Bacteria: Current Status, 25**

Giovanna E. Felis, Elisa Salvetti, and Sandra Torriani

- 2.1. Families and Genera of Lactic Acid Bacteria, 25
  - 2.2. A Focus on the Family Lactobacillaceae, 27
  - 2.3. Taxonomic Tools in the Genomic Era, 29
- References, 30

**3. Genomic Evolution of Lactic Acid Bacteria: From Single Gene Function to the Pan-genome, 32**

Grace L. Douglas, M. Andrea Azcarate-Peril, and Todd R. Klaenhammer

- 3.1. The Genomics Revolution, 32
- 3.2. Genomic Adaptations of LAB to the Environment, 33
  - 3.2.1. *LAB Evolution in the Dairy Environment*, 33
  - 3.2.2. *LAB Evolution in Vegetable and Meat Fermentations*, 34
  - 3.2.3. *Fast-evolving LAB*, 35
  - 3.2.4. *LAB in the GI Tract*, 35
- 3.3. “Probiotic Islands”? 36
- 3.4. Stress Resistance and Quorum Sensing Mechanisms, 39
- 3.5. The Impact of Genome Sequencing on Characterization, Taxonomy, and Pan-genome Development of Lactic Acid Bacteria, 40
- 3.6. Functional Genomic Studies to Unveil Novel LAB Utilities, 45
- 3.7. Conclusions, 47
- References, 47

**4. Lactic Acid Bacteria: Comparative Genomic Analyses of Transport Systems, 55**

Graciela L. Lorca, Taylor A. Twiddy, and Milton H. Saier, Jr.

- 4.1. Introduction, 55
- 4.2. Channel-forming Proteins, 56
- 4.3. The Major Facilitator Superfamily, 59
- 4.4. Other Large Superfamilies of Secondary Carriers, 60
- 4.5. ABC Transporters, 64
- 4.6. Heavy Metal Transporters, 65
- 4.7. P-type ATPases in Prokaryotes, 68
- 4.8. The Prokaryote-specific Phosphotransferase System (PTS), 68
- 4.9. Multidrug Resistance Pumps, 71
- 4.10. Nutrient Transport in LAB, 71
- 4.11. Conclusions and Perspectives, 72
- Note, 73
- Acknowledgments, 73
- References, 73

**5. Novel Developments in Bacteriocins from Lactic Acid Bacteria, 80**

Ingolf F. Nes, Christina Gabrielsen, Dag A. Brede, and Dzung B. Diep

- 5.1. Introduction, 80
- 5.2. Characteristics and Classification of Bacteriocins, 80
  - 5.2.1. *Class Ia: Lantibiotics*, 81
  - 5.2.2. *Class II: The Non-lantibiotics*, 81
- 5.3. Mode of Action, 84
- 5.4. Bacteriocin Resistance, 86
- 5.5. Applications, 88
  - 5.5.1. *Opportunities and Hurdles in Application of Bacteriocins*, 88
  - 5.5.2. *Application of Bacteriocins in Medical-related and Personal Hygiene Products*, 88
  - 5.5.3. *Bacteriocin-producing Probiotics*, 90

- 5.6. Future Perspectives, 92  
References, 93
- 6. Bacteriophages of Lactic Acid Bacteria and Biotechnological Tools, 100**  
Beatriz Martínez, Pilar García, Ana Rodríguez, Mariana Piuri,  
and Raúl R. Raya
- 6.1. Introduction, 100  
6.2. Bacteriophages of Lactic Acid Bacteria, 101  
    6.2.1. *Classification of Lactococcal Phages*, 103  
6.3. Antiphage Strategies, 103  
    6.3.1. *Natural Mechanisms of Phage Resistance*, 103  
    6.3.2. *Genetically Engineered Antiphage Systems*, 105  
6.4. Phage-Based Molecular Tools, 106  
    6.4.1. *Phage Integrases and Integration Vectors*, 106  
    6.4.2. *CRISPR Applications*, 108  
    6.4.3. *Recombineering*, 110  
6.5. LAB Phages as Biocontrol Tools, 113  
6.6. Conclusions, 113  
References, 113
- 7. Lactic Acid Bacteria and the Human Intestinal Microbiome, 120**  
François P. Douillard and Willem M. de Vos
- 7.1. Introduction, 120  
7.2. Ecology of the Human Intestinal Tract, 121  
    7.2.1. *The Human Microbiome in the Upper and Lower Intestinal Tract*, 121  
    7.2.2. *Lactic Acid Bacteria Associated with the Human Intestine*, 122  
    7.2.3. *Metagenomic Studies of the Intestine in Relation to LAB*, 123  
7.3. A Case Study: The *Lactobacillus rhamnosus* Species, 124  
    7.3.1. *Genomic Diversity of Lact. rhamnosus and Intestinal Adaptation*, 124  
    7.3.2. *Lact. rhamnosus Metabolism and Adaptation to the Intestine*, 126  
    7.3.3. *Host Interaction Factors in Lact. rhamnosus*, 127  
    7.3.4. *The Lact. rhamnosus Species: Autochthonous or Allochthonous in the Human Intestine?* 127  
7.4. Concluding Perspectives and Future Directions, 129  
Acknowledgments, 130  
References, 130
- 8. Probiotics and Functional Foods in Immunosuppressed Hosts, 134**  
Ivanna Novotny Nuñez, Martín Manuel Palomar,  
Alejandra de Moreno de LeBlanc, Carolina Maldonado Galdeano,  
and Gabriela Perdigón
- 8.1. Introduction, 134  
8.2. Probiotic Fermented Milk in a Malnutrition Model, 135  
8.3. Probiotic Administration in Stress Process, 138  
8.4. Conclusions, 140  
Acknowledgments, 141  
References, 141

**9. Lactic Acid Bacteria in Animal Production and Health, 144**

Damien Bouchard, Sergine Even, and Yves Le Loir

- 9.1. Introduction, 144
- 9.2. Lactic Acid Bacteria and Probiotics, 145
- 9.3. Classifications and Regulatory Criteria of Probiotics in Animal Health, 146
- 9.4. Probiotic LAB and Animal Production Sectors, 147
  - 9.4.1. *Probiotics in Ruminants*, 147
  - 9.4.2. *Probiotics in Pigs*, 150
  - 9.4.3. *Probiotics in Poultry*, 152
- 9.5. Conclusions, 154
- References, 154

**10. Proteomics for Studying Probiotic Traits, 159**

Rosa Anna Siciliano and Maria Fiorella Mazzeo

- 10.1. Introduction, 159
- 10.2. Mass Spectrometric Methodologies in Proteomics, 160
  - 10.2.1. *The Classical Approach: 2-DE Separation and Protein Identification by Mass Spectrometry*, 160
  - 10.2.2. *Gel-Free Proteomic Approaches*, 160
- 10.3. Proteomics for Studying Molecular Mechanisms of Probiotic Action, 161
  - 10.3.1. *Adaptation Mechanisms to the GIT Environment*, 161
  - 10.3.2. *Adhesion Mechanisms to the Host Mucosa*, 162
  - 10.3.3. *Molecular Mechanisms of Probiotic Immunomodulatory Effects*, 164
  - 10.3.4. *Probiotics and Prebiotics*, 164
- 10.4. Concluding Remarks and Future Directions, 165
- References, 166

**11. Engineering Lactic Acid Bacteria and Bifidobacteria for Mucosal Delivery of Health Molecules, 170**

Thibault Allain, Camille Aubry, Jane M. Natividad, Jean-Marc Chatel, Philippe Langella, and Luis G. Bermúdez-Humarán

- 11.1. Introduction, 170
- 11.2. *Lactococcus lactis*: A Pioneer Bacterium, 171
- 11.3. *Lactobacillus* spp. as a Delivery Vector, 171
- 11.4. Bifidobacteria as a New Live Delivery Vehicle, 171
- 11.5. Engineering Genetic Tools for Protein and DNA Delivery, 172
  - 11.5.1. *Cloning Vectors*, 172
  - 11.5.2. *Expression Systems*, 173
- 11.6. Therapeutic Applications, 176
  - 11.6.1. *Inflammatory Bowel Disease (IBD)*, 176
  - 11.6.2. *Anti-protease Enzyme-producing LAB: The Tole of Elafin*, 176
  - 11.6.3. *Antioxidant Enzyme-producing Lactococci and Lactobacilli*, 177
- 11.7. Allergy, 178
  - 11.7.1. *Use of LAB in Food Allergy*, 178
  - 11.7.2. *Allergic Airways Diseases*, 179
- 11.8. Autoimmune Diseases, 180
  - 11.8.1. *Type 1 Diabetes Mellitus*, 180
  - 11.8.2. *Celiac Disease*, 180

- 11.9. Infectious Diseases, 181
  - 11.9.1. *Mucosal Delivery of Bacterial Antigens*, 181
  - 11.9.2. *Mucosal Delivery of Viral Antigens*, 181
  - 11.9.3. *Parasitic Diseases*, 183
- References, 184
- 12. Lactic Acid Bacteria for Dairy Fermentations: Specialized Starter Cultures to Improve Dairy Products, 191**
  - Domenico Carminati, Giorgio Giraffa, Miriam Zago, Mariángeles Briggiler Marcó, Daniela Guglielmotti, Ana Binetti, and Jorge Reinheimer
  - 12.1. Introduction, 191
  - 12.2. Adjunct Cultures, 191
    - 12.2.1. *Ripening Cultures*, 192
    - 12.2.2. *Protective Cultures*, 193
    - 12.2.3. *Probiotic Cultures*, 195
    - 12.2.4. *Exopolysaccharide-producing Starters*, 196
  - 12.3. Phage-Resistant Starters, 199
  - 12.4. New Sources of Starter Strains, 201
  - 12.5. Conclusions, 202
  - References, 203
- 13. *Lactobacillus sakei* in Meat Fermentation, 209**
  - Marie-Christine Champomier-Vergès and Monique Zagorec
  - 13.1. Introduction, 209
  - 13.2. Genomics and Diversity of the Species *Lactobacillus sakei*, 210
  - 13.3. Post-genomic Vision of Meat Fitness Traits of *Lactobacillus sakei*, 212
    - 13.3.1. *Energy Sources*, 212
    - 13.3.2. *Stress Response*, 213
  - 13.4. Conclusions, 214
  - References, 214
- 14. Vegetable and Fruit Fermentation by Lactic Acid Bacteria, 216**
  - Raffaella Di Cagno, Pasquale Filannino, and Marco Gobbetti
  - 14.1. Introduction, 216
  - 14.2. Lactic Acid Bacteria Microbiota of Raw Vegetables and Fruits, 216
  - 14.3. Fermentation of Vegetable Products, 218
    - 14.3.1. *Spontaneous Fermentation*, 218
    - 14.3.2. *The Autochthonous Starters*, 218
  - 14.4. Main Fermented Vegetable Products, 221
    - 14.4.1. *Sauerkrauts*, 221
    - 14.4.2. *Kimchi*, 222
    - 14.4.3. *Pickled Cucumbers*, 223
  - 14.5. Physiology and Biochemistry of LAB during Vegetable and Fruit Fermentation, 223
    - 14.5.1. *Metabolic Adaptation by LAB during Plant Fermentation*, 224
  - 14.6. Food Phenolic Compounds: Antimicrobial Activity and Microbial Responses, 224

- 14.6.1. *Effect of Phenolics on the Growth and Viability of LAB*, 224
- 14.6.2. *Metabolism of Phenolics by LAB*, 226
- 14.7. Health-promoting Properties of Fermented Vegetables and Fruits, 226
- 14.8. Alternative Sources of Novel Probiotics Candidates, 226
- 14.9. Vehicles for Delivering Probiotics, 228
- 14.10. Conclusions, 229
- References, 229

## **15. Lactic Acid Bacteria and Malolactic Fermentation in Wine, 231**

Aline Lonvaud-Funel

- 15.1. Introduction, 231
- 15.2. The Lactic Acid Bacteria of Wine, 231
  - 15.2.1. *Origin*, 231
  - 15.2.2. *Species*, 232
  - 15.2.3. *Identification*, 232
  - 15.2.4. *Typing at Strain Level*, 233
  - 15.2.5. *Detection of Specific Strains*, 233
- 15.3. The *Oenococcus Oeni* Species, 233
- 15.4. Evolution of Lactic Acid Bacteria during Winemaking, 234
  - 15.4.1. *Interactions between Wine Microorganisms*, 235
  - 15.4.2. *Environmental Factors*, 236
- 15.5. Lactic Acid Bacteria Metabolism and its Impact on Wine Quality, 237
  - 15.5.1. *Sugars*, 237
  - 15.5.2. *Carboxylic Acids*, 237
  - 15.5.3. *Amino Acids*, 240
  - 15.5.4. *Other Metabolisms with Sensorial Impact*, 241
- 15.6. Controlling the Malolactic Fermentation, 242
- 15.7. Conclusions, 243
- References, 244

## **16. The Functional Role of Lactic Acid Bacteria in Cocoa Bean Fermentation, 248**

Luc De Vuyst and Stefan Weckx

- 16.1. Introduction, 248
- 16.2. Cocoa Crop Cultivation and Harvest, 249
- 16.3. The Cocoa Pulp or Fermentation Substrate, 250
- 16.4. Fresh, Unfermented Cocoa Beans, 251
- 16.5. Cocoa Bean Fermentation, 252
  - 16.5.1. *Rationale*, 252
  - 16.5.2. *Farming Practices*, 253
- 16.6. Succession of Microorganisms during Cocoa Bean Fermentation, 256
  - 16.6.1. *The Spontaneous Three-phase Cocoa Bean Fermentation Process*, 256
  - 16.6.2. *Yeast Fermentation*, 257
  - 16.6.3. *LAB Fermentation*, 260
  - 16.6.4. *AAB Fermentation*, 264
- 16.7. Biochemical Changes in the Cocoa Beans during Fermentation and Drying, 266
- 16.8. Optimal Fermentation Course and End of Fermentation, 268
- 16.9. Further Processing of Fermented Cocoa Beans, 269
  - 16.9.1. *Drying of Fermented Cocoa Beans*, 269

- 16.9.2. *Roasting of Fermented Dry Cocoa Beans*, 270
- 16.10. Use of Starter Cultures for Cocoa Bean Fermentation, 271
  - 16.10.1. *Rationale*, 271
  - 16.10.2. *Experimental Use of Cocoa Bean Starter Cultures*, 271
- 16.11. Concluding Remarks, 273
- References, 273

## **17. B-Group Vitamins Production by Probiotic Lactic Acid Bacteria, 279**

Jean Guy LeBlanc, Jonathan Emiliano Laiño, Marianela Juárez del Valle, Graciela Savoy de Giori, Fernando Sesma, and María Pía Taranto

- 17.1. Introduction, 279
- 17.2. B-Group Vitamins, 280
  - 17.2.1. *Riboflavin (Vitamin B<sub>2</sub>)*, 281
  - 17.2.2. *Folates (Vitamin B<sub>9</sub>)*, 284
- 17.3. Probiotics *In Situ*, 286
  - 17.3.1. *Vitamin B<sub>12</sub> (Cobalamin)*, 288
  - 17.3.2. *Cobalamin Biosynthesis by Lactobacillus reuteri*, 289
- 17.4. Conclusions, 291
- Acknowledgments, 292
- References, 292

## **18. Nutraceuticals and High Value Metabolites Produced by Lactic Acid Bacteria, 297**

Elvira M. Hebert, Graciela Savoy de Giori, and Fernanda Mozzi

- 18.1. Introduction, 297
- 18.2. Nutraceuticals, 298
  - 18.2.1. *Low-calorie Sugars*, 298
  - 18.2.2. *Short-Chain Fatty Acids*, 300
  - 18.2.3. *Conjugated Linoleic Acid (CLA)*, 301
  - 18.2.4. *Bioactive Peptides*, 301
  - 18.2.5. *Gamma-aminobutyric Acid (GABA)*, 303
  - 18.2.6. *Vitamins*, 305
- 18.3. Exopolysaccharides, 306
- 18.4. Commodity Chemicals, 307
- 18.5. Conclusions, 308
- References, 308

## **19. Production of Flavor Compounds by Lactic Acid Bacteria in Fermented Foods, 314**

Anne Thierry, Tomislav Pogačić, Magalie Weber, and Sylvie Lortal

- 19.1. Introduction, 314
- 19.2. Flavor and Aroma Compounds, 315
  - 19.2.1. *Volatile Compounds: Diversity, Analytical Methods*, 315
  - 19.2.2. *Contribution of Volatile Aroma Compounds to Flavor*, 316
  - 19.2.3. *Origin of Aroma Compounds*, 316
- 19.3. LAB of Fermented Foods and their Role in Flavor Formation, 316
  - 19.3.1. *Biochemical Processes of Flavor Compound Formation in Food and Potential of LAB*, 324
  - 19.3.2. *Flavor Compounds Produced from Carbohydrate Fermentation by LAB*, 324
  - 19.3.3. *Flavor Compounds from Amino Acid Conversion by LAB*, 326

- 19.3.4. *Flavor Compounds from Lipids in LAB*, 327
- 19.3.5. *Synthesis of Esters*, 328
- 19.3.6. *Interspecies and Intraspecies Variations of Aroma Compound Production*, 328
- 19.4. Biotic and Abiotic Factors Modulating the Contribution of LAB to Flavor Formation, 331
  - 19.4.1. *General Scheme of Flavor Formation in Fermented Foods In Situ*, 331
  - 19.4.2. *Factors Modulating the Expression of the Flavor-related Activities of LAB*, 332
  - 19.4.3. *Factors Determining the Real Contribution of LAB to Food Flavor*, 333
- 19.5. Conclusions and Research Perspectives, 333
- References, 334

## **20. Lactic Acid Bacteria Biofilms: From their Formation to their Health and Biotechnological Potential, 341**

Jean-Christophe Piard and Romain Briandet

- 20.1. Lactic Acid Bacteria Biofilms are Ubiquitous in a Wide Variety of Environments from Nature to Domesticated Settings, 341
- 20.2. Biofilm Life Cycle and Bacterial Factors Involved in LAB Biofilm Lifestyle, 346
- 20.3. Health and Biotechnological Potential of LAB Biofilms and Underlying Mechanisms, 352
- 20.4. Conclusions, 354
- Acknowledgments, 355
- References, 355
