

TABLE OF CONTENTS

Preface vii

A Visual Guide to Genetics: Analysis & Principles xvi

PART I

INTRODUCTION 1

1 OVERVIEW OF GENETICS 1

- 1.1 The Molecular Expression of Genes 3
- 1.2 The Relationship Between Genes and Traits 6
- 1.3 Fields of Genetics 10

PART II

PATTERNS OF INHERITANCE 17

2 MENDELIAN INHERITANCE 17

- 2.1 Mendel's Study of Pea Plants 18
- 2.2 Law of Segregation 21
- 2.3 Law of Independent Assortment 25
- 2.4 Studying Inheritance Patterns in Humans 30
- 2.5 Probability and Statistics 32

3 CHROMOSOME TRANSMISSION DURING CELL DIVISION AND SEXUAL REPRODUCTION 45

- 3.1 General Features of Chromosomes 45
- 3.2 Cell Division 49
- 3.3 Mitosis and Cytokinesis 52
- 3.4 Meiosis 55
- 3.5 Sexual Reproduction 59
- 3.6 The Chromosome Theory of Inheritance and Sex Chromosomes 62

4 EXTENSIONS OF MENDELIAN INHERITANCE 74

- 4.1 Overview of Simple Inheritance Patterns 75

4.2 Dominant and Recessive Alleles 76

4.3 Environmental Effects on Gene Expression 78

4.4 Incomplete Dominance, Overdominance, and Codominance 79

4.5 X-linked Inheritance 84

4.6 Sex-Influenced and Sex-Limited Inheritance 86

4.7 Lethal Alleles 87

4.8 Pleiotropy 88

4.9 Gene Interactions 89

5 NON-MENDELIAN INHERITANCE 102

5.1 Maternal Effect 103

5.2 Epigenetic Inheritance: Dosage Compensation 105

5.3 Epigenetic Inheritance: Genomic Imprinting 112

5.4 Extranuclear Inheritance 115

6 GENETIC LINKAGE AND MAPPING IN EUKARYOTES 126

6.1 Overview of Linkage 126

6.2 Relationship Between Linkage and Crossing Over 128

6.3 Genetic Mapping in Plants and Animals 136

6.4 Genetic Mapping in Haploid Eukaryotes 142

6.5 Mitotic Recombination 145

7 GENETIC TRANSFER AND MAPPING IN BACTERIA AND BACTERIOPHAGES 156

7.1 Overview of Genetic Transfer in Bacteria 157

7.2 Bacterial Conjugation 157

7.3 Conjugation and Mapping via *Hfr* Strains 162

7.4 Bacterial Transduction 167

7.5 Bacterial Transformation 169

7.6 Medical Relevance of Bacterial Genetic Transfer 171

7.7 Plaque Formation and Intergenic Complementation in Bacteriophages 172

7.8 Intragenic Mapping in Bacteriophages 174

8 VARIATION IN CHROMOSOME STRUCTURE AND NUMBER 183

8.1 Microscopic Examination of Eukaryotic Chromosomes 183

8.2 Changes in Chromosome Structure: An Overview 186

8.3 Deletions and Duplications 187

8.4 Inversions and Translocations 192

8.5 Changes in Chromosome Number: An Overview 198

8.6 Variation in the Number of Chromosomes Within a Set: Aneuploidy 198

8.7 Variation in the Number of Sets of Chromosomes 201

8.8 Natural and Experimental Mechanisms That Produce Variation in Chromosome Number 204

PART III

MOLECULAR STRUCTURE & REPLICATION OF THE GENETIC MATERIAL 215

9 MOLECULAR STRUCTURE OF DNA AND RNA 215

9.1 Identification of DNA as the Genetic Material 215

9.2 Overview of DNA and RNA Structure 221

9.3 Nucleotide Structure 222

9.4 Structure of a DNA Strand 224

9.5 Discovery of the Double Helix 224

9.6 Structure of the DNA Double Helix 228

9.7 RNA Structure 232

10 CHROMOSOME ORGANIZATION AND MOLECULAR STRUCTURE 239

- 10.1 Organization of Sites Along Bacterial Chromosomes 239
- 10.2 Structure of Bacterial Chromosomes 240
- 10.3 Organization of Sites Along Eukaryotic Chromosomes 243
- 10.4 Sizes of Eukaryotic Genomes and Repetitive Sequences 245
- 10.5 Structure of Eukaryotic Chromosomes in Nondividing Cells 246
- 10.6 Structure of Eukaryotic Chromosomes During Cell Division 253

11 DNA REPLICATION 261

- 11.1 Structural Overview of DNA Replication 261
- 11.2 Bacterial DNA Replication: The Formation of Two Replication Forks at the Origin of Replication 265
- 11.3 Bacterial DNA Replication: Synthesis of New DNA Strands 268
- 11.4 Bacterial DNA Replication: Chemistry and Accuracy 274
- 11.5 Eukaryotic DNA Replication 277

PART IV MOLECULAR PROPERTIES OF GENES 287

12 GENE TRANSCRIPTION AND RNA MODIFICATION 287

- 12.1 Overview of Transcription 287
- 12.2 Transcription in Bacteria 290
- 12.3 Transcription in Eukaryotes 295
- 12.4 RNA Modification 299
- 12.5 A Comparison of Transcription and RNA Modification in Bacteria and Eukaryotes 309

13 TRANSLATION OF mRNA 315

- 13.1 The Genetic Basis for Protein Synthesis 315
- 13.2 The Relationship Between the Genetic Code and Protein Synthesis 318

- 13.3 Experimental Determination of the Genetic Code 323
- 13.4 Structure and Function of tRNA 327
- 13.5 Ribosome Structure and Assembly 330
- 13.6 Stages of Translation 332

14 GENE REGULATION IN BACTERIA 344

- 14.1 Overview of Transcriptional Regulation 345
- 14.2 Regulation of the *lac* Operon 347
- 14.3 Regulation of the *trp* Operon 356
- 14.4 Translational and Posttranslational Regulation 360
- 14.5 Riboswitches 362

15 GENE REGULATION IN EUKARYOTES I: TRANSCRIPTIONAL REGULATION 368

- 15.1 Regulatory Transcription Factors 369
- 15.2 Chromatin Remodeling, Histone Variation, and Histone Modification 376
- 15.3 DNA Methylation 382
- 15.4 Insulators 384
- 15.5 The ENCODE Project 386

16 GENE REGULATION IN EUKARYOTES II: EPIGENETICS AND REGULATION AT THE RNA LEVEL 392

- 16.1 Overview of Epigenetics 392
- 16.2 Epigenetics and Development 397
- 16.3 Epigenetics and Environmental Agents 402
- 16.4 Regulation of RNA Splicing, RNA Stability, and Translation 405

17 GENETICS OF VIRUSES 417

- 17.1 Virus Structure and Genetic Composition 417
- 17.2 Overview of Viral Reproductive Cycles 422
- 17.3 Bacteriophage λ Reproductive Cycle 427
- 17.4 HIV Reproductive Cycle 433

18 GENE MUTATION AND DNA REPAIR 443

- 18.1 Effects of Mutations on Gene Structure and Function 444
- 18.2 Random Nature of Mutations 450
- 18.3 Spontaneous Mutations 452
- 18.4 Induced Mutations 457
- 18.5 DNA Repair 461

19 RECOMBINATION AND TRANSPOSITION AT THE MOLECULAR LEVEL 473

- 19.1 Homologous Recombination 473
- 19.2 Site-Specific Recombination 479
- 19.3 Transposition 481

PART V GENETIC TECHNOLOGIES 496

20 DNA TECHNOLOGIES 496

- 20.1 Gene Cloning Using Vectors 497
- 20.2 Polymerase Chain Reaction 503
- 20.3 DNA Sequencing 512
- 20.4 Site-Directed Mutagenesis 514
- 20.5 Blotting Methods to Detect Genes and Gene Products 515
- 20.6 Methods for Analyzing DNA- and RNA-Binding Proteins 520

21 BIOTECHNOLOGY 528

- 21.1 Uses of Microorganisms in Biotechnology 528
- 21.2 Genetically Modified Animals 531
- 21.3 Reproductive Cloning and Stem Cells 537
- 21.4 Genetically Modified Plants 542
- 21.5 Human Gene Therapy 545

22 GENOMICS I: ANALYSIS OF DNA 553

- 22.1 Overview of Chromosome Mapping 554
- 22.2 Cytogenetic Mapping via Microscopy 554

- 22.3 Linkage Mapping via Crosses 556
- 22.4 Physical Mapping via Cloning and DNA Sequencing 559
- 22.5 Genome-Sequencing Projects 564
- 22.6 Metagenomics 572

23 GENOMICS II: FUNCTIONAL GENOMICS, PROTEOMICS, AND BIOINFORMATICS 579

- 23.1 Functional Genomics 580
- 23.2 Proteomics 588
- 23.3 Bioinformatics 592

PART VI

GENETIC ANALYSIS OF INDIVIDUALS AND POPULATIONS 606

24 MEDICAL GENETICS AND CANCER 606

- 24.1 Inheritance Patterns of Genetic Diseases 607
- 24.2 Detection of Disease-Causing Alleles via Haplotypes 613
- 24.3 Genetic Testing and Screening 615

- 24.4 Prions 617
- 24.5 Genetic Basis of Cancer 619
- 24.6 Personalized Medicine 631

25 DEVELOPMENTAL GENETICS 640

- 25.1 Overview of Animal Development 640
- 25.2 Invertebrate Development 644
- 25.3 Vertebrate Development 655
- 25.4 Plant Development 659
- 25.5 Sex Determination in Animals 662

26 POPULATION GENETICS 671

- 26.1 Genes in Populations and the Hardy-Weinberg Equation 671
- 26.2 Overview of Microevolution 676
- 26.3 Natural Selection 677
- 26.4 Genetic Drift 685
- 26.5 Migration 687
- 26.6 Nonrandom Mating 688
- 26.7 Sources of New Genetic Variation 690

27 QUANTITATIVE GENETICS 702

- 27.1 Overview of Quantitative Traits 702
- 27.2 Statistical Methods for Evaluating Quantitative Traits 704
- 27.3 Polygenic Inheritance 707
- 27.4 Heritability 712
- 27.5 Selective Breeding 717

28 EVOLUTIONARY GENETICS 728

- 28.1 Origin of Species 729
- 28.2 Phylogenetic Trees 734
- 28.3 Molecular Evolution 742

Index I-1

ABOUT THE AUTHOR

Robert J. Brooker is a professor in the Department of Genetics, Cell Biology, and Development at the University of Minnesota–Minneapolis. He received his B.A. in biology from Wittenberg University in 1978 and his Ph.D. in genetics from Yale University in 1983. At Harvard, he conducted postdoctoral studies on the lactose permease, which is the product of the *lacY* gene of the *lac* operon. He continues his work on transporters at the University of Minnesota. Dr. Brooker's laboratory primarily investigates the structure, function, and regulation of iron transporters found in bacteria and *C. elegans*. At the University of Minnesota he teaches undergraduate courses in biology, genetics, and cell biology.

DEDICATION

To my wife, Deborah, and our children, Daniel, Nathan, and Sarah
