<i>Preface to the second edition</i>	<i>page ix</i>
<i>Preface to the first edition</i>	xiii
<i>Acknowledgements</i>	xvi
<b>1 Preliminary notions</b>	<b>1</b>
1.1 Mass, energy, linear momentum	2
1.2 The law of motion of a particle	5
1.3 The mass of a system of particles, kinematic invariants	6
1.4 Systems of interacting particles	9
1.5 Natural units	11
1.6 Collisions and decays	13
1.7 Scattering experiments	18
1.8 Hadrons, leptons and quarks	23
1.9 The fundamental interactions	25
1.10 The passage of radiation through matter	26
1.11 The sources of high-energy particles	31
1.12 Particle detectors	39
Problems	55
Summary	61
Further reading	61
<b>2 Nucleons, leptons and mesons</b>	<b>63</b>
2.1 The muon and the pion	64
2.2 Strange mesons and hyperons	66
2.3 The quantum numbers of the charged pion	69
2.4 Charged leptons and neutrinos	73
2.5 The Dirac equation	77
2.6 The positron	80
2.7 The antiproton	81
Problems	84
Summary	86
Further reading	86
<b>3 Symmetries</b>	<b>87</b>
3.1 Symmetries	88
3.2 Parity	90

3.3	Particle–antiparticle conjugation	93
3.4	Time reversal and $CPT$	96
3.5	The parity of the pions	97
3.6	Charged pion decay	99
3.7	Quark flavours and baryonic number	102
3.8	Leptonic flavours and lepton number	104
3.9	Isospin	105
3.10	The sum of two isospins; the product of two representations	107
3.11	$G$ -parity	110
	Problems	111
	Summary	114
	Further reading	115
<b>4</b>	<b>Hadrons</b>	<b>116</b>
4.1	Resonances	117
4.2	The $3/2^+$ baryons	121
4.3	The Dalitz plot	127
4.4	Spin, parity, isospin analysis of three-pion systems	129
4.5	Pseudoscalar and vector mesons	133
4.6	The quark model	137
4.7	Mesons	139
4.8	Baryons	142
4.9	Charm	147
4.10	The third family	155
4.11	The elements of the Standard Model	160
	Problems	163
	Summary	166
	Further reading	166
<b>5</b>	<b>Quantum electrodynamics</b>	<b>167</b>
5.1	Charge conservation and gauge symmetry	168
5.2	The Lamb and Retherford experiment	170
5.3	Quantum field theory	174
5.4	The interaction as an exchange of quanta	176
5.5	The Feynman diagrams. QED	179
5.6	Analyticity and the need for antiparticles	182
5.7	Electron–positron annihilation into a muon pair	185
5.8	The evolution of $\alpha$	187
	Problems	193
	Summary	195
	Further reading	195
<b>6</b>	<b>Chromodynamics</b>	<b>196</b>
6.1	Hadron production at electron–positron colliders	197
6.2	Nucleon structure	202

6.3	The colour charges	210
6.4	Colour bound states	214
6.5	The evolution of $\alpha_s$	218
6.6	The quark masses	222
6.7	The origin of the hadron mass	225
6.8	The quantum vacuum	227
	Problems	229
	Summary	231
	Further reading	232
<b>7</b>	<b>Weak interactions</b>	<b>233</b>
7.1	Classification of weak interactions	234
7.2	Low-energy lepton processes and the Fermi constant	235
7.3	Parity violation	240
7.4	Helicity and chirality	243
7.5	Measurement of the helicity of leptons	248
7.6	Violation of the particle–antiparticle conjugation	253
7.7	Cabibbo mixing	255
7.8	The Glashow, Iliopoulos and Maiani mechanism	258
7.9	The quark mixing matrix	260
7.10	Weak neutral currents	268
7.11	The chiral symmetry of QCD and the mass of the pion	269
	Problems	272
	Summary	274
	Further reading	274
<b>8</b>	<b>The neutral mesons' oscillations and <math>CP</math> violation</b>	<b>276</b>
8.1	Flavour oscillations, mixing and $CP$ violation	276
8.2	The states of the neutral $K$ system	278
8.3	Strangeness oscillations	280
8.4	Regeneration	283
8.5	$CP$ violation	284
8.6	Oscillation and $CP$ violation in its interference with mixing in the neutral $B$ system	288
8.7	$CP$ violation in meson decays	296
	Problems	301
	Summary	302
	Further reading	302
<b>9</b>	<b>The Standard Model</b>	<b>303</b>
9.1	The electro-weak interaction	304
9.2	Structure of the weak neutral currents	306
9.3	Electro-weak unification	308
9.4	Determination of the electro-weak angle	311
9.5	The intermediate vector bosons	317

9.6	The UA1 experiment	321
9.7	The discovery of $W$ and $Z$	325
9.8	The evolution of $\sin^2\theta_W$	332
9.9	Precision tests at LEP	333
9.10	The interaction between intermediate bosons	338
9.11	Precision measurements of the $W$ and top masses at the Tevatron	340
9.12	The spontaneous breaking of the local gauge symmetry	345
9.13	The search for the Higgs at LEP and at the Tevatron	352
9.14	LHC, ATLAS and CMS	354
9.15	Discovery of the $H$ boson	361
	Problems	371
	Summary	374
	Further reading	375
<b>10</b>	<b>Neutrinos</b>	<b>376</b>
10.1	Neutrino mixing	377
10.2	Neutrino oscillation	380
10.3	Flavour transition in matter	392
10.4	The experiments	397
10.5	Limits on neutrino mass	402
10.6	Majorana neutrinos	407
	Problems	413
	Summary	417
	Further reading	417
<b>11</b>	<b>Epilogue</b>	<b>419</b>
	<i>Appendix 1 Greek alphabet</i>	424
	<i>Appendix 2 Fundamental constants</i>	425
	<i>Appendix 3 Properties of elementary particles</i>	426
	<i>Appendix 4 Clebsch–Gordan coefficients</i>	431
	<i>Appendix 5 Spherical harmonics and d-functions</i>	432
	<i>Appendix 6 Experimental and theoretical discoveries in particle physics</i>	433
	<i>Solutions</i>	436
	<i>References</i>	458
	<i>Index</i>	466
