Preface *page* xi

1 A tour of matroids **1**
1.1 Motivation 1
1.2 Introduction to matroids 3
1.3 Geometries 11
1.4 Graphs and matroids 17
1.5 Bipartite graphs and transversal matroids 26
Exercises 29

2 Cryptomorphisms **39**
2.1 From independent sets to bases and back again 40
2.2 Circuits and independent sets 49
2.3 Rank, flats, hyperplanes and closure 51
2.4 Lattice of flats 61
2.5 Tying it together with the rank function 67
2.6 Cryptomorphisms between flats, hyperplanes and closure 73
2.7 Application to optimization: the greedy algorithm 81
Exercises 87

3 New matroids from old **100**
3.1 Matroid deletion and contraction 100
3.2 Deletion and contraction in graphs and representable matroids 108
3.3 Duality in matroids 112
3.4 Duality in graphic and representable matroids 120
3.5 Direct sums and connectivity 128
Exercises 139

4 Graphic matroids **152**
4.1 Graphs are matroids 153
4.2 Graph versions of matroid theorems 158
4.3 Duality and cocircuits in graphs 164

4.4 Connectivity and 2-isomorphism 168
Exercises 173

5 Finite geometry 180
5.1 Affine geometry and affine dependence 181
5.2 Affine dependence 188
5.3 The projective plane $PG(2, q)$ 194
5.4 Projective geometry 203
5.5 Counting k-flats and q-binomial coefficients 207
5.6 Abstract projective planes 212
Exercises 214

6 Representable matroids 221
6.1 Matrices are matroids 221
6.2 Representing representable matroids 231
6.3 How representations depend on the field 240
6.4 Non-representable matroids 244
6.5 Representations and geometry 249
Exercises 253

7 Other matroids 261
7.1 Transversal matroids 261
7.2 Transversal matroids, matching theory and geometry 264
7.3 Hyperplane arrangements and matroids 273
7.4 Cutting cheese; counting regions via deletion and contraction 281
Exercises 287

8 Matroid minors 296
8.1 Examples, excluded minors and the Scum Theorem 296
8.2 Binary matroids 301
8.3 Summary of excluded minor results 310
Exercises 316

9 The Tutte polynomial 323
9.1 Motivation and history 323
9.2 Definition and basic examples 324
9.3 Corank–nullity polynomial 327
9.4 Duality and direct sum 333
9.5 Tutte–Grothendieck invariants 336
9.6 The chromatic polynomial 340
Exercises 349

Projects 355
P.1 The number of matroids 355
P.2 Matrix-Tree Theorem 357
P.3 Relaxing a hyperplane 360

P.4 Bases and probability in affine and projective space 363
P.5 Representing affine space – the characteristic set of $AG(n, q)$ 367
P.6 The card game SET® and affine geometry 371
P.7 More matroid constructions – truncation 377

Appendix Matroid axiom systems **381**
A.1 Axiom lists 381
A.2 Axiom tables 382

Bibliography 385
