Introduction	<i>page</i> 1
<b>Part I The Semantic Web</b>	<b>7</b>
1. The World Wide Web today	9
1.1. The architecture of the web	9
1.2. Conventional web search engines	21
1.3. Problems with searching the web	37
1.4. Possible solutions	43
1.5. Summary	48
2. The Semantic Web and the RDF language	52
2.1. Introduction	52
2.2. The XML language	55
2.3. The basics of the RDF language	65
2.4. The XML syntax for RDF	73
2.5. Special RDF constructs	84
2.6. Representing background knowledge: RDF schema	98
2.7. Examples of RDF use	110
2.8. Summary	118
3. Managing and querying RDF sources	122
3.1. RDF descriptions on the web	122
3.2. Parsing and processing metadata	127
3.3. Querying RDF sources	130
3.4. Reasoning during the execution of queries	156
3.5. Optimising RDF queries	163
3.6. Summary	168

<b>Part II</b>	<b>Ontologies and logics</b>	<b>173</b>
1.	Description Logic	173
4.1.	Introduction	175
4.2.	An informal introduction to the DL formalism	178
4.3.	The $\mathcal{AL}$ DL language	183
4.4.	The $\mathcal{AL}$ language family	189
4.5.	The $\mathcal{SHIQ}$ language family	197
4.6.	Terminological reasoning tasks	206
4.7.	Eliminating terminological axioms	212
4.8.	ABoxes	217
4.9.	Mapping DL languages to first-order logic	227
4.10.	Advanced DL languages	231
4.11.	Summary	243
5.	Reasoning on simple DL languages	246
5.1.	Reasoning in the $\mathcal{AL}$ language	246
5.2.	The $\mathcal{ALCN}$ tableau algorithm – an introduction	254
5.3.	The $\mathcal{ALCN}$ tableau algorithm for empty TBoxes	267
5.4.	The $\mathcal{ALCN}$ tableau algorithm for non-empty TBoxes	281
5.5.	Handling ABoxes in the $\mathcal{ALCN}$ tableau algorithm	291
5.6.	Summary	299
6.	Implementing a simple DL reasoning engine	302
6.1.	Introduction	302
6.2.	Executing the reasoning engine	303
6.3.	Data structures	304
6.4.	Transforming concepts to negation normal form	308
6.5.	The entry point of the tableau algorithm	311
6.6.	Tableau transformation rules	314
6.7.	Blocking	337
6.8.	Auxiliary functions	339
6.9.	Challenges	344
6.10.	Summary	345
7.	The $\mathcal{SHIQ}$ tableau algorithm	346
7.1.	An outline of the $\mathcal{SHIQ}$ tableau algorithm	346
7.2.	Transitive roles; the language $\mathcal{S}$	348
7.3.	Role hierarchies – extension $\mathcal{H}$	352
7.4.	Inverse roles – extension $\mathcal{I}$	356
7.5.	Functional restrictions – extension $\mathcal{F}$	362
7.6.	Qualified number restrictions – extension $\mathcal{Q}$	374
7.7.	The complete $\mathcal{SHIQ}$ tableau algorithm	375
7.8.	The $\mathcal{SHIQ}$ tableau algorithm for ABoxes	385

CONTENTS	vii
7.9. Optimisation of the tableau algorithm	387
7.10. Summary	404
<b>Part III – Ontologies and the Semantic Web</b>	<b>405</b>
8. The Web Ontology Language	407
8.1. The language OWL – an introduction	407
8.2. The ontology language OWL 1	412
8.3. Revision of the OWL language: OWL 2	445
8.4. Summary	450
<i>References</i>	451
<i>Index</i>	460
