Preface	ix
Acknowledgments	xiii
1 Introductory Concepts	1
1.1 Introduction	1
1.1.1 What Is a System?	1
1.2 Particles, Rigid Bodies, and Deformable Solids	2
1.3 Degrees of Freedom	3
1.3.1 Constraints	5
1.3.2 Generalized Coordinates	7
1.4 Types of Forces and Motions	9
1.4.1 Vibratory Motion	10
1.5 Systems of Units	10
1.6 Linearization	12
1.7 Differential Equations and the Principle of Superposition	15
1.8 Dimensional Analysis and Nondimensionalization	17
1.9 Numerical Integration	18
1.10 What Is a Vehicle?	20
1.11 Cause-and-Effect Principle	20
1.12 Bibliography	21
1.13 Problems	21
2 Kinematics Fundamentals	25
2.1 Introduction	25
2.2 Position, Velocity, and Acceleration	25
2.3 Reference Frames: Single Rotation in a Plane	26
2.4 Column Vector Representation	29
2.5 Commonly Used Coordinate Systems	30
2.5.1 Rectilinear Coordinates	31
2.5.2 Normal-Tangential Coordinates	33
2.5.3 Cylindrical Coordinates	38
2.5.4 Spherical Coordinates	42
2.6 Moving Reference Frames	46
2.7 Selection of Rotation Parameters	48
2.7.1 Transformation by Three Rotation Angles	49
2.7.2 Resolving a Rotated Vector	51
2.7.3 Single Rotation about a Specified Axis	52
2.7.4 Finite Rotations Do Not Commute	54
2.8 Rate of Change of a Vector, Angular Velocity	58
2.8.1 Angular Velocity for Plane Motion	58
2.8.2 Angular Velocity for Three-Dimensional Motion	59

2.8.3	Other Definitions of Angular Velocity	62
2.8.4	Additive Properties of Angular Velocity	62
2.9	Angular Acceleration and Second Derivatives	64
2.9.1	Angular Acceleration	64
2.9.2	Second Derivatives	67
2.10	Relative Motion	69
2.11	Instantaneous Center of Zero Velocity	73
2.12	Bibliography	74
2.13	Problems	75
3	Kinematics Applications	83
3.1	Introduction	83
3.2	Motion with Respect to the Rotating Earth	83
3.3	Contact	85
3.4	Rolling	86
3.4.1	General Formulation	87
3.4.2	Rolling Constraints, Wheel on an Axle	88
3.5	Bicycle Model of a Car	92
3.5.1	Where Is the Instant Center of a Car?	95
3.6	Kinematic Differential Equations	98
3.7	Topspin and Backspin	99
3.8	Mechanisms	100
3.8.1	Links and Joints	101
3.8.2	Degrees of Freedom: Gruebler's Equation	102
3.8.3	Four-Bar Linkage and Slider-Crank Mechanism	104
3.9	Instant Center Analysis for Linkages	105
3.9.1	Locating Instant Centers in Linkages	105
3.9.2	Velocity Analysis Using Instant Centers	108
3.10	Bibliography	110
3.11	Problems	110
4	Kinetics Fundamentals	115
4.1	Introduction	115
4.2	Rigid Body Geometry	115
4.2.1	Center of Mass	115
4.2.2	Mass Moment of Inertia	118
4.3	Linear Momentum and Angular Momentum	120
4.4	Resultant Force and Moment	124
4.5	Laws of Motion	125
4.5.1	First Law	126
4.5.2	Second Law	126
4.5.3	Third Law	128
4.5.4	Inertia Forces and Inertia Moments	129
4.6	Forces and Moments Acting on Bodies	131
4.7	Force of Gravity	132
4.8	Contact and Reaction Forces	133
4.9	Dry Friction Forces	134
4.10	Aerodynamic Forces	138
4.10.1	Lift Force and Drag Force	140
4.10.2	Aerodynamic Coefficients	141
4.10.3	Flow Separation	143

4.10.4	Drag Approximation for Very Low Reynolds Numbers	145
4.11	Spring Forces	147
4.11.1	Modeling of Springs	148
4.11.2	Equivalent Spring Constants	149
4.11.3	Stiffness-Generating Components	151
4.12	Dampers	155
4.13	Bibliography	156
4.14	Problems	156
5	Kinetics Applications	165
5.1	Introduction	165
5.2	Rolling	165
5.3	Mechanical Trail	169
5.4	Impulse and Momentum	172
5.4.1	Impulsive Forces	172
5.4.2	Idealized Model of an Impulsive Force	174
5.5	Work, Energy, and Power	175
5.5.1	Kinetic Energy and Power	175
5.5.2	Potential Energy	178
5.5.3	Gravitational Potential Energy	179
5.5.4	Potential Energy of Springs	181
5.5.5	Work-Energy Relations	182
5.5.6	Forces That Do No Work	182
5.5.7	Hysteresis and Energy Loss	183
5.6	Equations of Motion	184
5.6.1	Deriving the Equation of Motion of Conservative One-Degree-of-Freedom Systems Using Energy	188
5.7	Solution of the Equations of Motion	189
5.8	Linearization, Equilibrium, and Stability	190
5.8.1	Calculating the Equilibrium Position(s)	191
5.8.2	Motion in the Vicinity of Equilibrium	191
5.8.3	Nature of the Response of the Linearized Equations	193
5.8.4	Equations of Motion of Linear Systems about Equilibrium	193
5.9	Motion in the Vicinity of the Earth	200
5.10	Collisions	203
5.10.1	Collisions of Particles	203
5.11	Impact of Rigid Bodies: Simple Solution	208
5.12	A More Accurate Model of Rigid Body Impact	214
5.12.1	Compression Stage	216
5.12.2	Restitution Stage	218
5.13	Bibliography	220
5.14	Problems	221
6	Response of Dynamical Systems	231
6.1	Introduction	231
6.2	The Unit Impulse and Unit Step Functions	231
6.2.1	The Unit Impulse Function	231
6.2.2	The Unit Step Function	232
6.3	Homogeneous Plus Particular Solution Approach	233
6.4	Laplace Transform Solution	235
6.4.1	General Formulation	235

6.4.2	Solving Differential Equations Using the Laplace Transform	237
6.5	Response of First-Order Systems	239
6.6	Review of Complex Variables	243
6.7	Second-Order Systems	244
6.8	Free Response of Undamped Second Order Systems	246
6.9	Free Response of Damped Second-Order Systems	250
6.10	Underdamped Systems	251
6.11	Damping Estimation by Logarithmic Decrement	255
6.12	Response to an Impulsive Force	258
6.12.1	Response to Multiple Impulses	261
6.13	Step Response	263
6.14	Response to General Excitations – Convolution Integral	271
6.15	Time-Domain vs. Frequency-Domain Analysis	274
6.16	Response to Harmonic Excitation	278
6.16.1	General Formulation for Second-Order Systems	278
6.16.2	Quality Factor	280
6.16.3	Phase Angle	281
6.17	Resonance	282
6.18	Transmitted Force	285
6.19	Base Excitation	287
6.20	Harmonic Excitation Due to Imbalances and Eccentricity	290
6.20.1	Rotating Imbalances	290
6.20.2	Whirling of Rotating Shafts	291
6.21	Bibliography	294
6.22	Problems	294
7	Response of Multi-Degrees-of-Freedom Systems	303
7.1	Introduction	303
7.2	Modeling of Multi-Degrees-of-Freedom Systems	303
7.2.1	Definition of Sign Definiteness	304
7.3	Coupling	312
7.4	Free Motion of Undamped Multi-Degrees-of-Freedom Systems	312
7.4.1	Natural Frequencies	314
7.4.2	Modal Vectors	315
7.4.3	Normalization of Modal Vectors	318
7.4.4	General Form of the Free Response	320
7.5	Solving for the Natural Frequencies and Modal Vectors	321
7.6	Beat Phenomenon	322
7.7	Unrestrained Motion and Rigid Body Modes	327
7.8	Orthogonality of the Modal Vectors	331
7.9	Expansion Theorem	332
7.9.1	Expansion by Sets of Functions	333
7.9.2	Expansion by Geometric Vectors	334
7.9.3	Expansion by Modal Vectors	335
7.10	Modal Equations of Motion and Response	336
7.10.1	Modal Response	337
7.10.2	Modal Response Using Homogeneous and Particular Solution Approach	339
7.10.3	Response of Modes with Zero Eigenvalues	340
7.10.4	Response to Impulsive Loading	341
7.11	Mode Participation and Isolation	345

7.11.1	Mode Participation	345
7.11.2	Mode Isolation—Mode Control	347
7.12	Approximate Approach for Damped Systems	348
7.13	Response to Harmonic Excitation	352
7.13.1	General Formulation	352
7.13.2	Special Case: Two-Degrees-of-Freedom System	355
7.13.3	Modal Analysis	355
7.14	Vibration-Reducing Devices	356
7.14.1	Motion Amplitude before Vibration Reducer Is Added	357
7.14.2	Undamped Vibration Absorbers	358
7.14.3	Tuned Mass Dampers	362
7.15	First-Order Systems	364
7.16	Numerical Integration	365
7.17	Bibliography	367
7.18	Problems	368
8	Analytical Mechanics	375
8.1	Introduction	375
8.2	Generalized Coordinates and Constraints	375
8.2.1	Generalized Coordinates	376
8.2.2	Constraints and Constraint Forces	377
8.3	Velocity Representation	381
8.3.1	Representation by Generalized Velocities	381
8.3.2	Representation by Generalized Speeds (Quasi-Velocities)	382
8.3.3	Relationship between Generalized Velocities and Generalized Speeds	382
8.4	Virtual Displacements and Virtual Work	388
8.5	Virtual Displacements and Virtual Work for Rigid Bodies	390
8.6	Generalized Forces	394
8.7	Principle of Virtual Work for Static Equilibrium	399
8.8	D'Alembert's Principle	401
8.8.1	General Formulation	401
8.8.2	Extension to Rigid Bodies	402
8.8.3	Using D'Alembert's Principle to Obtain Equations of Motion	404
8.9	Hamilton's Principle	408
8.10	Lagrange's Equations	411
8.11	Constrained Systems	418
8.11.1	Lagrange Multiplier Method	419
8.11.2	Constraint Relaxation Method	421
8.12	Kane's Equations	422
8.13	Natural and Nonnatural Systems, Equilibrium	426
8.14	Small Motions about Equilibrium	431
8.15	Rayleigh's Dissipation Function	437
8.16	Generalized Momentum, First Integrals	439
8.17	Impulsive Motion	440
8.17.1	Impulsive Excitation in Lagrangian Mechanics	440
8.17.2	Impulse-Momentum Relationships for Kane's Equations	441
8.18	Bibliography	444
8.19	Problems	444

9	Three-Dimensional Kinematics of Rigid Bodies	459
9.1	Introduction	459
9.2	Basic Kinematics of Rigid Bodies	459
9.2.1	Pure Translation	460
9.2.2	Pure Rotation	466
9.2.3	Combined Translation and Rotation	465
9.3	Euler Angles	467
9.3.1	Euler Angle Sequences	467
9.3.2	Angular Velocity	470
9.3.3	Angular Acceleration	472
9.4	Axisymmetric Bodies	475
9.5	Rolling	478
9.5.1	Disk Originally Lying Flat	480
9.5.2	Beginning with the Disk as Vertical	483
9.5.3	Steady Precession	485
9.6	Orientation Change by Successive Rotations	488
9.7	Interconnections	490
9.7.1	Basic Types of Joints	490
9.7.2	Combined Sliding and Rotation	492
9.7.3	Universal Joints	493
9.8	4×4 Matrix Description of a General Transformation	496
9.9	Euler Parameters	499
9.9.1	Transformation Matrix in Terms of Euler Parameters	501
9.9.2	Relating the Euler Parameters to Angular Velocities	502
9.9.3	Relating Euler Parameters to the Transformation Matrix	503
9.9.4	Relating Euler Parameters to the Euler Angles	504
9.10	Rodrigues Parameters	506
9.10.1	Screw Algebra and Rodrigues Parameters	508
9.10.2	Rotation of a Body	512
9.10.3	Finding the Screw Axis and Rotation Angle	513
9.11	Bibliography	517
9.12	Problems	517
10	Mass Moments of Inertia	527
10.1	Introduction	527
10.2	Center of Mass	527
10.3	Mass Moment of Inertia	528
10.3.1	Calculation of the Mass Moments and Products of Inertia	530
10.4	Transformation Properties of the Inertia Matrix	536
10.4.1	Translation of Coordinates	536
10.4.2	Rotation of Coordinate Axes	538
10.5	Principal Moments of Inertia	542
10.5.1	Special Case: Repeated Principal Moments of Inertia	543
10.6	Bibliography	546
10.7	Problems	546
11	Dynamics of Three-Dimensional Rigid Body Motion	553
11.1	Introduction	553
11.2	Linear and Angular Momentum	553
11.3	Transformation Properties of Angular Momentum	557
11.3.1	Translation of Coordinates	557

11.3.2	Rotation of Coordinates	558
11.4	General Describing Equations	562
11.4.1	Resultant Force and Moment	563
11.4.2	Force and Moment Balances	564
11.4.3	Moment Balance about an Arbitrary Different Point	564
11.5	Description in Terms of Body Fixed Coordinates	565
11.6	Angular Momentum Balance for Axisymmetric Bodies	569
11.6.1	Modified Euler's Equations	569
11.6.2	Expressing the Rotational Equations Using Components of Shape Frame	571
11.7	Stability Analysis of Rotational Motion	577
11.8	Steady Precession of a Rolling Disk	579
11.9	Rotation about a Fixed Axis	584
11.10	Impulse and Momentum	588
11.11	Energy and Work	590
11.11.1	Kinetic Energy	590
11.11.2	Work and Conservation of Energy	592
11.12	Analytical Equations for Rigid Bodies	594
11.12.1	Euler Angles as Generalized Coordinates	594
11.12.2	Lagrange's and Kane's Equations	595
11.13	Torque-Free Motion of Axisymmetric Bodies	602
11.13.1	Integrals of the Motion	602
11.13.2	Body and Space Cones	604
11.13.3	Direct and Retrograde Precession	606
11.13.4	Energy Dissipation and Nutational Instability	607
11.14	Bibliography	611
11.15	Problems	611
12	Vehicle Dynamics—Basic Loads and Longitudinal Motions	623
12.1	Introduction	623
12.2	Vehicle Coordinate Systems and Nomenclature	623
12.3	Loads on Vehicles	625
12.4	Acceleration	626
12.4.1	Acceleration Analysis	627
12.4.2	Maximum Acceleration	628
12.5	Power	630
12.5.1	Constant Power Approximation	632
12.6	More Advanced Model Including Wheel Inertia	634
12.7	Braking	637
12.7.1	Brake Effects	637
12.7.2	Force Analysis	638
12.7.3	Brake Proportioning	641
12.7.4	Anti-Lock Brake Systems	644
12.8	Rollover and Lateral Instability	647
12.8.1	Simple Combined Lateral and Roll Analysis	650
12.8.2	Critical Sliding Velocity	650
12.9	Weight Shift and Statical Indeterminacy	656
12.9.1	Statically Indeterminate Systems	656
12.9.2	An Approximate Method for Calculating Wheel Loads	657
12.9.3	Calculation of Center of Mass Location	662
12.10	Bibliography	665

12.11 Problems	665
13 Vehicle Dynamics – Tire and Aerodynamic Forces	671
13.1 Introduction	671
13.2 Tires	671
13.2.1 Tire Terminology	672
13.2.2 Tire Components	673
13.3 Tire Forces	674
13.3.1 Resultant Tire Forces and Moments	677
13.4 Lateral Forces and Tire Slip	678
13.5 Tire Torques	682
13.5.1 Aligning Torque	683
13.5.2 Overturning Moment	685
13.6 Slip Ratio and Longitudinal Tire Forces	685
13.6.1 Wheel Slip	685
13.6.2 Tractive and Lateral Tire Forces	686
13.6.3 More Comprehensive Tire Models	687
13.7 Rolling Resistance	687
13.7.1 Factors Affecting Rolling Resistance	691
13.7.2 Induced Drag	692
13.7.3 Rolling Resistance Models	693
13.8 Camber	694
13.9 Other Tire Effects	695
13.9.1 Pressure	696
13.9.2 Temperature	697
13.9.3 Speed	697
13.9.4 Conicity and Ply Steer	697
13.10 Summary of Tire Force Effects	698
13.11 Nondimensional Analysis of Tire Behavior	699
13.12 Aerodynamic Forces	700
13.12.1 Calculation of Aerodynamic Coefficients from Test Data	704
13.13 Bibliography	706
13.14 Problems	707
14 Vehicle Dynamics –Lateral Stability	711
14.1 Introduction	711
14.2 Kinematics –Steer Angle Definitions	711
14.3 Wheel Loads and Slip Angles	717
14.3.1 Free-Body Diagram and Slip Angles	717
14.3.2 Understeer Gradient and Critical Speed	720
14.3.3 Bump Compliance	723
14.3.4 Lateral Acceleration Gain	723
14.4 Slip Angle Kinematics	725
14.5 Transient Motion Equations	728
14.6 Response	731
14.6.1 Numerical Integration of the Stability Equations	732
14.7 Eigenvalue Analysis	735
14.8 Mass-Spring-Damper Analogy	739
14.9 Steady-State Response	742
14.10 Yaw Velocity Gain and Curvature Response	745
14.11 Tangent Speed and Hydroplaning	746

14.12 Neutral Steer Point	718
14.13 Modeling the Driver	749
14.14 Electronic Stability Control	751
14.15 Which Wheels Will Slide First?	756
14.16 Bibliography	761
14.17 Problems	768
15 Vehicle Dynamics – Bounce, Pitch, and Roll	763
15.1 Introduction	763
15.2 Sources of Excitation	764
15.2.1 Ride Quality and Human Response to Vibration	765
15.3 Unsprung vs. Sprung Mass	766
15.4 Simple Suspension Models	766
15.5 Quarter-Car Model	770
15.5.1 Single-Degree-of-Freedom Model	770
15.5.2 Change in Natural Frequency and Damping Factor Due to Payload Weight	774
15.5.3 Wheel Hop	774
15.5.4 Two-Degrees-of-Freedom Model	775
15.6 Pitch and Bounce Motions	778
15.6.1 Equations of Motion	778
15.6.2 Analysis of the Equations of Motion and Response	780
15.7 Olley Criteria	785
15.8 Response to Harmonic Excitation	786
15.8.1 Modeling an Uneven Road	786
15.8.2 Frequency Response for a Single-Degree-of-Freedom Model	788
15.8.3 Frequency Response for Two-Degrees-of-Freedom Models	791
15.9 Roll Dynamics	794
15.10 Roll Center Analysis	798
15.11 Lateral Force Reduction Due to Weight Shift	801
15.12 Roll Axis	803
15.12.1 Design for Cornering	806
15.13 Introduction to Suspension Systems	807
15.14 Suspension System Terminology and Geometry	807
15.15 Axle Suspensions	811
15.16 Independent Suspensions	814
15.17 Roll Center Construction	817
15.18 Jacking	820
15.19 Scrub	821
15.20 Anti-Roll Bar	822
15.21 Force Analysis for Anti-Squat and Anti-Dive	824
15.21.1 Independent Suspensions and Rear Wheel Drive	828
15.21.2 Front Wheel Drive	828
15.21.3 Four Wheel Drive	829
15.21.4 Anti-Dive for Braking	829
15.22 Bibliography	830
15.23 Problems	831
16 Appendix – Common Inertia Properties	835
Index	839
