Contents

Preface ..... *v*

1. Method of Weighted Residuals 1.1

1.1 Statement of a Typical Boundary Value Problem(BVP) 1.1
1.2 The Weighted Residual Method (WRM) 1.2
1.3 The Galerkin's Method 1.14
1.4 Other Variants of the Weighted Residual Method 1.23
1.4.1 The Collocation Method 1.23
1.4.2 The Sub-Domain Method 1.24
1.4.3 The Least Squares Method 1.25
References 1.28
Problems 1.29

2. Finite Difference Method 2.1

2.1 Classification of Partial Differential Equations 2.1
2.1.1 Boundary and Initial Conditions 2.3
2.2 Finite Differences 2.4
2.2.1 Elementary Finite Difference Quotients 2.5
2.3 Basic Aspects of Finite-Difference Equations 2.9
2.3.1 Consistency 2.9
2.3.2 Convergence 2.11
2.3.3 Explicit and Implicit Methods 2.11
2.3.4 Explicit and Implicit Methods for Two-Dimensional Heat Conduction Equation 2.14
2.3.5 ADI Method 2.16
2.4 Errors and Stability Analysis 2.18
2.4.1 Introduction 2.18
2.4.2 First-Order Wave Equation 2.22
2.4.3 Stability of Hyperbolic and Elliptic Equations 2.22

2.5 Fundamentals of Fluid Flow Modeling 2.27
2.5.1 Conservative Property 2.27
2.5.2 The Upwind Scheme 2.31
2.5.3 Transportive Property 2.31
2.5.4 Upwind Differencing and Artificial Viscosity 2.33
2.5.5 Second Upwind Differencing or Hybrid Scheme 2.35
2.5.6 Some More Suggestions for Improvements 2.36
2.6 Some Non-Trivial Problems with Discretized Equations 2.38
References 2.39
Problems 2.41

3. Introduction to Finite Volume Method 3.1

3.1 The Basic Technique 3.1
3.2 A Generalized Approach 3.6
3.2.1 Equations with First Derivatives 3.7
3.2.2 Equations with Second Derivatives 3.9
References 3.13
Problems 3.14

4. Introduction to the Finite Element Method 4.1

4.1 Introduction 4.1
4.2 Galerkin's Weak Formulations for the Two Dimensional Steady Heat Conduction Equation 4.3
4.2.1 Weighted Residual with the Analytical Solution as the Trial Function at the Element Level 4.4
4.2.2 Galerkin's Weighted Residual Form at the Element Level 4.5
4.3 Element Formulation for the 2-D Steady State Heat Transfer Problem .. 4.6
4.3.1 Approximation for the Thermal Profile 4.6
4.3.2 Determination of Element Equations 4.9
4.3.3 Assembly of Elements and Solutions of the Global System Equation 4.11
References 4.16
Problems 4.17

5. Vorticity-Stream Function Approach 5.1

5.1 Introduction 5.1
5.2 Numerical Methodology 5.2
5.3 The Algorithm 5.3
5.3.1 Bottom Wall Boundary 5.4
5.3.2 Upper Boundary 5.5

5.3.3 Inlet Boundary 5.5
5.3.4 Outflow Boundary 5.6
5.4 Application to Curvilinear Geometries 5.8
References 5.10
Problems 5.11

6. Solution of Navier-Stokes Equations for Incompressible Flows Using SIMPLE and MAC Algorithms 6.1

6.1 Introduction 6.1
6.2 Staggered Grid 6.2
6.3 Semi Implicit Method for Pressure Linked Equations (SIMPLE) 6.3
6.3.1 x - Momentum Equation 6.3
6.3.2 y - Momentum Equation 6.7
6.3.3 Solution Procedure 6.9
6.3.4 *Two-Dimensional System of Equations and Line-by-line TDMA* 6.10
6.4 Solution of the Unsteady Navier-Stokes Equations 6.12
6.4.1 Introduction to the MAC Method 6.12
6.4.2 MAC Formulation 6.14
6.4.3 Boundary Conditions 6.19
6.4.4 Numerical Stability Considerations 6.21
6.4.5 Higher-Order Upwind Differencing 6.21
6.4.6 Sample Results 6.23
6.5 Solution of Energy Equation 6.25
6.5.1 Retention of Dissipation 6.27
6.6 Solution Procedure 6.27
References 6.29
Problems 6.30

7. Solution of Navier-Stokes Equations in Curvilinear Coordinates 7.1

7.1 Introduction 7.1
7.1.1 Continuity and Momentum Equations 7.2
7.2 Discretization of the Fluid Domain for Continuity and *Momentum Equations* 7.4
7.3 Scalar Transport 7.12
7.4 The Discretised System of Equations 7.14
7.5 Discretization of Equations 7.15
7.6 Time Discretization 7.19
7.7 Calculation of Pressure 7.20

7.8 Boundary Conditions 7.27
References 7.28
Problem 7.29

8. Volume-of-Fluid Methods for Surface Tension Dominant Two-Phase Flows 8.1

8.1 Introduction 8.1
8.2 Numerical Methodology 8.4
8.2.1 Advection Algorithm 8.5
8.2.2 Interface Reconstruction 8.7
8.2.2.1 LVIRA 8.8
8.2.2.2 CLSVOF 8.8
8.2.3 Surface Tension Model 8.10
8.2.3.1 K8 Kernel 8.10
8.2.3.2 CLSVOF 8.11
8.2.4 Outline of the Numerical Solution Procedure 8.12
8.3 Formulation of the Problems Involving Liquid and its Own Vapor 8.13
8.3.1 Jump Conditions at Liquid Vapor Interface 8.13
8.3.2 Numerical Procedure for Handling Problems with Liquid-Vapor Interface 8.14
8.3.2.1 The CLSVOF Advection Algorithm 8.15
8.4 Validation of the Interface Tracking Algorithms 8.15
8.4.1 Advection of a Hollow Square 8.16
8.4.2 Circle in Shear Flow 8.17
8.5 Results and Discussion 8.19
8.5.1 Capillary Wave 8.19
8.5.2 Rayleigh-Taylor Instability 8.19
8.6 Bubble Formation at an Underwater Orifice 8.22
8.7 Simulations for Vapor Bubbles at Near Critical Pressure 8.26
8.8 Conclusions 8.26
8.9 Acknowledgment 8.28
References 8.29
Nomenclature 8.33

Index *I.1*
