PREFACE	9
CHAPTER 1 WHY STUDY AERODYNAMICS?	11
1.1 Aerodynamics and the Energy-Maneuverability Technique	12
1.2 Solving for the Aerothermodynamic Parameters	18
1.3 Description of an Airplane	36
1.4 Summary	37
Problems	38
References	42
CHAPTER 2 FUNDAMENTALS OF FLUID MECHANICS	43
2.1 Introduction to Fluid Dynamics	44
2.2 Conservation of Mass	46
2.3 Conservation of Linear Momentum	50
2.4 Applications to Constant-Property Flows	56
2.5 Reynolds Number and Mach Number as Similarity Parameters	65
2.6 Concept of the Boundary Layer	73
2.7 Conservation of Energy	75
2.8 First Law of Thermodynamics	76
2.9 Derivation of the Energy Equation	78
2.10 Summary	86
Problems	86
References	97
CHAPTER 3 DYNAMICS OF AN INCOMPRESSIBLE, INVISCID FLOW FIELD	98
3.1 Inviscid Flows	99
3.2 Bernoulli's Equation	100
3.3 Use of Bernoulli's Equation to Determine Airspeed	103
3.4 The Pressure Coefficient	106
3.5 Circulation	109
3.6 Irrotational Flow	112
3.7 Kelvin's Theorem	113

- 5.3 Wing-Geometry Parameters 246
- 5.4 Aerodynamic Force and Moment Coefficients 254
- 5.5 Wings of Finite Span 283
 - Problems 298
 - References 302

CHAPTER 6 INCOMPRESSIBLE FLOWS AROUND AIRFOILS OF INFINITE SPAN

304

- 6.1 General Comments 305
- 6.2 Circulation and the Generation of Lift 306
- 6.3 General Thin-Airfoil Theory 308
- 6.4 Thin, Flat-Plate Airfoil (Symmetric Airfoil) 311
- 6.5 Thin, Cambered Airfoil 316
- 6.6 Laminar-Flow Airfoils 327
- 6.7 High-Lift Airfoil Sections 331
- 6.8 Multielement Airfoil Sections for Generating High Lift 337
- 6.9 High-Lift Military Airfoils 344
- 6.10 Summary 347
 - Problems 347
 - References 349

CHAPTER 7 INCOMPRESSIBLE FLOW ABOUT WINGS OF FINITE SPAN

351

- 7.1 General Comments 352
- 7.2 Vortex System 355
- 7.3 Lifting-Line Theory for Unswept Wings 356
- 7.4 Panel Methods 385
- 7.5 Vortex Lattice Method 389
- 7.6 Factors Affecting Drag Due-to-Lift at Subsonic Speeds 411
- 7.7 Delta Wings 414
- 7.8 Leading-Edge Extensions 424
- 7.9 Asymmetric Loads on the Fuselage at High Angles of Attack 428
- 7.10 Flow Fields for Aircraft at High Angles of Attack 432
- 7.11 Unmanned Air Vehicle Wings 434
- 7.12 Summary 436
 - Problems 436
 - References 438

CHAPTER 8	DYNAMICS OF A COMPRESSIBLE FLOW FIELD	441
8.1	Thermodynamic Concepts	442
8.2	Adiabatic Flow in a Variable-Area Streamtube	451
8.3	Isentropic Flow in a Variable-Area Streamtube	455
8.4	Converging-diverging Nozzles	461
8.5	Characteristic Equations and Prandtl-Meyer Flows	464
8.6	Shock Waves	472
8.7	Viscous Boundary Layer	483
8.8	Shock-Wave/Boundary-Layer Interactions	490
8.9	Shock/Shock Interactions	492
8.10	The Role of Experiments for Generating Information Defining the Flow Field	496
8.11	Comments About the Scaling/Correction Process(es) for Relatively Clean Cruise Configurations	504
8.12	Summary	505
	Problems	505
	References	512
CHAPTER 9	COMPRESSIBLE, SUBSONIC FLOWS AND TRANSONIC FLOWS	515
9.1	Compressible, Subsonic Flow	516
9.2	Transonic Flow Past Unswept Airfoils	527
9.3	Wave Drag Reduction by Design	536
9.4	Swept Wings at Transonic Speeds	537
9.5	Transonic Aircraft	553
9.6	Summary	558
	Problems	558
	References	558
CHAPTER 10	TWO-DIMENSIONAL, SUPERSONIC FLOWS AROUND THIN AIRFOILS	561
10.1	Linear Theory	563
10.2	Second-Order Theory (Busemann's Theory)	571
10.3	Shock-Expansion Technique	576
10.4	Summary	582
	Problems	582
	References	585

**CHAPTER 11 SUPERSONIC FLOWS OVER WINGS
AND AIRPLANE CONFIGURATIONS****587**

- 11.1 General Remarks About Lift and Drag 589
- 11.2 General Remarks About Supersonic Wings 591
- 11.3 Governing Equation and Boundary Conditions 593
- 11.4 Consequences of Linearity 594
- 11.5 Solution Methods 595
- 11.6 Conical-Flow Method 595
- 11.7 Singularity-Distribution Method 608
- 11.8 Design Considerations for Supersonic Aircraft 635
- 11.9 Some Comments About the Design of the SST and of the HSCT 637
- 11.10 Slender Body Theory 644
- 11.11 Base Drag 646
- 11.12 Aerodynamic Interaction 649
- 11.13 Aerodynamic Analysis for Complete Configurations in a Supersonic Free Stream 652
- 11.14 Summary 653
- Problems 654
- References 656

CHAPTER 12 HYPERSONIC FLOWS**659**

- 12.1 The Five Distinguishing Characteristics 662
- 12.2 Newtonian Flow Model 667
- 12.3 Stagnation Region Flow-Field Properties 670
- 12.4 Modified Newtonian Flow 675
- 12.5 High L/D Hypersonic Configurations—Waveriders 692
- 12.6 Aerodynamic Heating 701
- 12.7 A Hypersonic Cruiser for the Twenty-First Century? 707
- 12.8 Importance of Interrelating CFD, Ground-Test Data, and Flight-Test Data 710
- 12.9 Boundary-Layer-Transition Methodology 712
- 12.10 Summary 716
- Problems 716
- References 718

CHAPTER 13	AERODYNAMIC DESIGN CONSIDERATIONS	721
13.1	High-Lift Configurations	722
13.2	Circulation Control Wing	735
13.3	Design Considerations for Tactical Military Aircraft	737
13.4	Drag Reduction	741
13.5	Development of an Airframe Modification to Improve the Mission Effectiveness of an Existing Airplane	752
13.6	Considerations for Wing/Canard, Wing/Tail, and Tailless Configurations	768
13.7	Comments on the F-15 Design	773
13.8	The Design of the F-22	774
13.9	The Design of the F-35	777
13.10	Summary	780
	Problems	780
	References	782
CHAPTER 14	TOOLS FOR DEFINING THE AERODYNAMIC ENVIRONMENT	785
14.1	Computational Tools	787
14.2	Establishing the Credibility of CFD Simulations	793
14.3	Ground-Based Test Programs	795
14.4	Flight-Test Programs	798
14.5	Integration of Experimental and Computational Tools: The Aerodynamic Design Philosophy	799
14.6	Summary	800
	References	800
APPENDIX A	THE EQUATIONS OF MOTION WRITTEN IN CONSERVATION FORM	802
APPENDIX B	A COLLECTION OF OFTEN USED TABLES	808
	ANSWERS TO SELECTED PROBLEMS	816
	INDEX	821
	CREDITS	829
