1 Introduction to smart polymers and their applications	1
M. R. AGUILAR and J. SAN ROMÁN, Institute of Polymer Science and Technology (ICTP-CSIC), Spain and Networking Biomedical Research Center in Bioengineering, Biomaterials and Nanomedicine (CIBER-BBN), Spain	
1.1 Introduction	1
1.2 Types of smart polymer	2
1.3 Applications of smart polymers	4
1.4 Conclusion	7
1.5 Acknowledgments	7
1.6 References	7
Part I Types of smart polymer	13
2 Temperature-responsive polymers: properties, synthesis and applications	15
R. HOOGENBOOM, Ghent University, Belgium	
2.1 Introduction	15
2.2 Basic principles of temperature-responsive polymers in aqueous solution	18
2.3 Key types of temperature-responsive polymers in aqueous solution	22
2.4 Selected applications of thermoresponsive polymers	33
2.5 Conclusion	37
2.6 Future trends	37
2.7 References	37

3	pH-responsive polymers: properties, synthesis and applications	45
	F. REYES-ORTEGA, Institute of Polymer Science and Technology (ICTP-CSIC), Spain and Networking Biomedical Research Center in Bioengineering, Biomaterials and Nanomedicine (CIBER-BBN), Spain	
3.1	Introduction	45
3.2	Key types and properties of pH-responsive polymers	46
3.3	Synthesis of pH-responsive polymers	56
3.4	Different methodologies for the preparation of pH-responsive polymers	57
3.5	Different architectures of pH-responsive polymers	62
3.6	Applications	71
3.7	Conclusion	79
3.8	Future trends	80
3.9	References	81
3.10	Appendix: abbreviations	90
4	Photo-responsive polymers: properties, synthesis and applications	93
	J. CUI and A. DEL CAMPO, Max Planck Institute for Polymer Research, Germany	
4.1	Introduction	93
4.2	Chromophores and their light-induced molecular response	94
4.3	Key types and properties of photo-responsive polymers	96
4.4	Applications	111
4.5	Conclusions and future trends	126
4.6	References	127
5	Magnetically responsive polymer gels and elastomers: properties, synthesis and applications	134
	M. ZRINYI, Semmelweis University, Hungary	
5.1	Introduction	134
5.2	Preparation of magnetically responsive polymer gels and elastomeric materials	136
5.3	Magnetic properties of filler-loaded polymers	144
5.4	Elastic behaviour of magnetic gels and elastomers	145

5.5	Kinetics of shape change	154
5.6	The swelling equilibrium under a uniform magnetic field	154
5.7	Polymer gels in a non-uniform electric or magnetic field	161
5.8	Future trends	162
5.9	Acknowledgements	163
5.10	References	163
6	Enzyme-responsive polymers: properties, synthesis and applications	166
	M. ZELZER, University of Nottingham, UK and R. V. ULJIN, University of Strathclyde, UK	
6.1	Introduction	166
6.2	Enzyme-responsive materials: rationale, definition and history	167
6.3	Key types and properties of enzyme-responsive polymers	171
6.4	Preparation of enzyme-responsive polymers	177
6.5	Characterisation of enzyme-responsive polymers	188
6.6	Applications	191
6.7	Conclusion	195
6.8	Future trends	196
6.9	References	197
7	Shape memory polymers: properties, synthesis and applications	204
	L. PEPONI, Institute of Polymer Science and Technology (ICTP-CSIC), Spain and I. NAVARRO-BAENA and J. M. KENNY, Institute of Polymer Science and Technology (ICTP-CSIC), Spain and University of Perugia, Terni, Italy	
7.1	Introduction	204
7.2	Characterizing shape memory effects in polymeric materials	211
7.3	Classifying shape memory polymers: classification by polymer structure	213
7.4	Classifying shape memory polymers: classification by type of stimulus	221
7.5	Main applications of smart polymers	225
7.6	Conclusion	227
7.7	References	227

viii	Contents	
8	Smart polymer hydrogels: properties, synthesis and applications	237
	S. K. SAMAL, M. DASH, P. DUBRUEL and S. VAN VLIJBERGHE, Ghent University, Belgium	
8.1	Introduction	237
8.2.	Key types and properties of smart polymer hydrogels	238
8.3	Applications of smart polymer hydrogels	257
8.4	Conclusions and future trends	264
8.5	References	265
9	Self-healing polymer systems: properties, synthesis and applications	271
	S. J. GARCIA, Delft University of Technology, The Netherlands and H. R. FISCHER, TNO Technical Sciences, The Netherlands	
9.1	Introduction	271
9.2	Types of self-healing	275
9.3	Self-healing and recovery of functionality in materials	281
9.4	Conclusion	292
9.5	Acknowledgements	293
9.6	References	293
Part II	Applications of smart polymers	299
10	Smart instructive polymer substrates for tissue engineering	301
	C. A. CUSTÓDIO, R. L. REIS and J. F. MANO, University of Minho, Portugal and PT Government Associated Laboratory, Portugal and A. DEL CAMPO, Max Planck Institute for Polymer Research, Germany	
10.1	Introduction	301
10.2	Instructive polymeric surfaces	302
10.3	Instructive hydrogels with a physicochemical response	306
10.4	Materials with 3D defined patterns	312
10.5	Applications in tissue engineering	314
10.6	Conclusion and future trends	317
10.7	References	318

11	Smart polymer nanocarriers for drug delivery	327
	M. TALELLI, A. DURO-CASTAÑO, G. RODRÍGUEZ-ESCALONA and M. J. VICENT, Centro de Investigación Príncipe Felipe, Spain	
11.1	Introduction	327
11.2	Smart polymeric carriers for drug delivery: pH-responsive nanocarriers	329
11.3	Smart polymeric carriers for drug delivery: enzyme-responsive nanocarriers	335
11.4	Smart polymeric carriers for drug delivery: oxidation-responsive nanocarriers	342
11.5	Smart polymeric carriers for drug delivery: temperature-responsive nanocarriers	344
11.6	Smart polymeric carriers for drug delivery: nanocarriers responsive to other stimuli	346
11.7	Conclusion and future trends	348
11.8	References	348
12	The use of smart polymers in medical devices for minimally invasive surgery, diagnosis and other applications	359
	L. G. GÓMEZ-MASCARAQUE, R. PALAO-SUAY and B. VÁZQUEZ, Institute of Polymer Science and Technology (ICTP-CSIC), Spain and Networking Biomedical Research Center in Bioengineering, Biomaterials and Nanomedicine (CIBER-BBN), Spain	
12.1	Introduction	359
12.2	Types and preparation of smart polymers for medical devices: polymers classified by type of stimulus	361
12.3	Types and preparation of smart polymers for medical devices: polymers classified by structural properties	365
12.4	Applications: medical devices based on shape memory polymers (SMPs)	378
12.5	Applications: SMPs in minimally invasive surgery	380
12.6	Applications: medical devices for cancer diagnosis and therapy	383
12.7	Applications: biosensors for diagnostic medical devices	384
12.8	Applications: biosensors and actuators for enhanced diagnostics and therapy	387
12.9	Applications: microfluidics-based biomedical devices	389
12.10	Conclusion and future trends	392
12.11	References	394

13	Smart polymers for bioseparation and other biotechnology applications	408
	I. N. SAVINA, University of Brighton, UK, I. YU. GALAEV, DSM, The Netherlands and S. V. MIKHALOVSKY, University of Brighton, UK and Nazarbayev University, Kazakhstan	
13.1	Introduction	408
13.2	Smart polymers (SPs) for bioseparation: use in affinity precipitation	409
13.3	Aqueous two-phase polymer systems formed by SPs for use in bioseparation	414
13.4	Chromatographic carriers with grafted SPs and adsorbents produced from SPs	417
13.5	Membranes with SP-grafted pores	425
13.6	Use of smart polymers in catalysis	429
13.7	Conclusion and future trends	432
13.8	References	432
14	Smart polymers for textile applications	437
	J. HU and J. LU, The Hong Kong Polytechnic University, Hong Kong	
14.1	Introduction	437
14.2	Types of smart polymers for textile applications	438
14.3	Actuating mechanisms for smart polymers	448
14.4	The use of smart polymer effects in textiles	453
14.5	Using smart polymers in practice: medical textiles	461
14.6	Conclusion	464
14.7	References	465
15	Biopolymers for food packaging applications	476
	M. J. FABRA, A. LÓPEZ-RUBIO and J. M. LAGARON, Institute of Agrochemistry and Food Technology (IATA-CSIC), Spain	
15.1	Introduction	476
15.2	Coatings and active coatings in foods	478
15.3	Micro- and nanoencapsulation in foods	483
15.4	Packaging	492
15.5	Conclusion and future trends	500
15.6	References	500

16	Smart polymers for optical data storage	510
	E. BLASCO, M. PIÑOL, C. BERGES, C. SÁNCHEZ-SOMOLINOS and L. ORIOL, ICMA, CSIC-Universidad de Zaragoza, Spain	
16.1	Introduction	510
16.2	Photoinduced molecular motions of azobenzene chromophores	515
16.3	Macromolecular architectures in azopolymers	516
16.4	Synthetic strategies to azopolymers for optical data storage	517
16.5	Photoinduced response of azobenzene polymers	527
16.6	Alternative macromolecular architectures for the design of azopolymers	533
16.7	Conclusion	540
16.8	References	542
