<i>Woodhead Publishing Series in Biomaterials</i>	<i>xvii</i>
<i>Foreword</i>	<i>xxiii</i>
<i>Preface</i>	<i>xxv</i>

Part I	Fundamentals of porous silicon for biomedical applications	1
1	Porous silicon for medical use: from conception to clinical use	3
	L. T. CANHAM, pSiMedica Ltd, UK	
1.1	Introduction	3
1.2	Biocompatibility of micromachined silicon	6
1.3	From concept to clinic	7
1.4	Producing useful physical forms of nanostructured silicon	13
1.5	Clinical manufacture	14
1.6	Clinical trials	16
1.7	Conclusions and future trends	17
1.8	Acknowledgements	18
1.9	References	18
2	Thermal stabilization of porous silicon for biomedical applications	21
	J. SALONEN, University of Turku, Finland and E. MÄKILÄ, University of Turku, Finland and University of Helsinki, Finland	
2.1	Introduction	21
2.2	Thermal oxidation	23
2.3	Thermal carbonization	26

2.4	Thermal nitridation and annealing	28
2.5	Conclusions and future trends	30
2.6	References	31
3	Thermal properties of nanoporous silicon materials N. KOSHIDA, Tokyo University of Agriculture and Technology, Japan	35
3.1	Introduction	35
3.2	Thermal constants of porous silicon (PSi)	36
3.3	Thermo-acoustic effect	38
3.4	Applications	43
3.5	Conclusions and future trends	48
3.6	Acknowledgment	48
3.7	References	48
4	Photochemical and nonthermal chemical modification of porous silicon for biomedical applications K. W. KOLASINSKI, West Chester University, USA	52
4.1	Introduction	52
4.2	Hydrosilylation and controlled surface modification of Si	55
4.3	Photo-initiated reactions	59
4.4	Mechanism of photo-initiated reaction	62
4.5	Electrochemical grafting	67
4.6	Reactions initiated by other means	70
4.7	Conclusions and future trends	72
4.8	Acknowledgments	72
4.9	References	72
5	Modifying porous silicon with self-assembled monolayers for biomedical applications J. J. GOODING and Y. ZHU, The University of New South Wales, Australia	81
5.1	Introduction	81
5.2	Silane-based monolayers	83
5.3	Hydrosilylation of alkenes and alkynes	86
5.4	Building more complicated interfaces	92
5.5	Conclusions and future trends	99
5.6	References	100

6	Protein-modified porous silicon films for biomedical applications	104
	I. REA, National Research Council, Italy, P. GIARDINA and S. LONGOBARDI, University of Naples, Italy and L. DE STEFANO, National Research Council, Italy	
6.1	Introduction	104
6.2	Proteins on surfaces	105
6.3	Porous silicon monolayers and multilayers	111
6.4	Characterization methods	115
6.5	Protein-modified PSi	119
6.6	Conclusions and future trends	125
6.7	References	125
7	Biocompatibility of porous silicon for biomedical applications	129
	D. LIU, M.-A. SHAHBAZI, L. M. BIMBO, J. HIRVONEN and H. A. SANTOS, University of Helsinki, Finland	
7.1	Introduction	129
7.2	Assessment methods for testing the biocompatibility of biomaterials	132
7.3	Effects of the PSi-based material interactions at the cellular level	142
7.4	<i>In vivo</i> behaviour of PSi-based materials	160
7.5	Conclusions and future trends	170
7.6	Acknowledgements	172
7.7	References	172
Part II	Porous silicon for bioimaging and biosensing applications	183
8	Optical properties of porous silicon materials for biomedical applications	185
	V. TORRES-COSTA and R. J. MARTÍN-PALMA, Universidad Autónoma de Madrid, Spain	
8.1	Introduction	185
8.2	Morphology of PSi	186
8.3	Effective medium models	190
8.4	Optical constants of nano-PSi	195

viii	Contents	
8.5	Stability of the optical properties of nano-PSi	199
8.6	Multilayer structures	200
8.7	Optical applications of PSi optical filters	208
8.8	Conclusions and future trends	217
8.9	References	218
9	<i>In vivo</i> imaging assessment of porous silicon S. SRINIVASAN, F. LEONARD, T. M. KUNCEWICZ and B. GODIN, Houston Methodist Research Institute, USA	223
9.1	Introduction	223
9.2	Magnetic resonance imaging (MRI)	225
9.3	Nuclear imaging	226
9.4	Optical imaging	230
9.5	Compiling PSi-based systems for imaging	234
9.6	<i>In vivo</i> imaging studies with PSi particles	243
9.7	Conclusions and future trends	247
9.8	Acknowledgments	247
9.9	References	247
10	Radiolabeled porous silicon for bioimaging applications A. J. AIRAKSINEN, University of Helsinki, Finland	253
10.1	Introduction	253
10.2	Methods for tracing drug delivery	253
10.3	Nuclear imaging in drug development	256
10.4	Radiolabeled PSi nanomaterials	258
10.5	Conclusions and future trends	266
10.6	References	266
11	Desorption/ionization on porous silicon (DIOS) for metabolite imaging Q. LIU, V. L. BROWN and L. HE, North Carolina State University, USA	270
11.1	Introduction	270
11.2	Substrate preparation for DIOS	272
11.3	Desorption and ionization mechanism of DIOS	273
11.4	Improved ionization methods based on DIOS	274
11.5	DIOS in mass spectrometry imaging (MSI)	277
11.6	Conclusions and future trends	280
11.7	References	280

12	Porous silicon for bacteria detection	286
	N. MASSAD-IVANIR and E. SEGAL, Technion – Israel Institute of Technology, Israel	
12.1	Introduction	286
12.2	‘Indirect’ bacteria detection	289
12.3	‘Direct’ bacteria detection	292
12.4	Conclusions and future trends	298
12.5	References	299
13	Nanoporous silicon biosensors for DNA sensing	304
	G. A. RODRIGUEZ, J. L. LAWRIE and S. M. WEISS, Vanderbilt University, USA	
13.1	Introduction	304
13.2	Porous silicon (PSi) sensor preparation	308
13.3	PSi DNA sensor structures, measurement techniques, and sensitivity	309
13.4	Optical transduction	310
13.5	Electrical and electrochemical transduction	319
13.6	Corrosion of PSi DNA sensors	320
13.7	Effect of pore size on DNA infiltration and detection	322
13.8	Control of DNA surface density in nanoscale pores	324
13.9	Kinetics for real-time sensing	326
13.10	Conclusions and future trends	329
13.11	Acknowledgement	330
13.12	References	330
Part III	Porous silicon for drug delivery, cancer therapy and tissue engineering applications	335
14	Drug loading and characterization of porous silicon materials	337
	V.-P. LEHTO and J. RIHKONEN, University of Eastern Finland, Finland	
14.1	Introduction	337
14.2	Methods for the loading of the cargo molecules into PSi pores	338
14.3	Characterization of drug-loaded PSi materials	343
14.4	Conclusions and future trends	350
14.5	References	350

15	Nanoporous silicon to enhance drug solubility C. A. PRESTIDGE and T. J. BARNES, University of South Australia, Australia	356
15.1	Introduction	356
15.2	Loading poorly soluble drugs into PSi	360
15.3	<i>In vitro</i> studies of drug dissolution	364
15.4	<i>In vivo</i> studies of drug delivery	366
15.5	Conclusions and future trends	370
15.6	References	371
16	Multistage porous silicon for cancer therapy J. S. FERNANDEZ-MOURE, M. EVANGELOPOULOS, S. SCARIA, J. O. MARTINEZ, B. S. BROWN, A. C. CORONEL, P. CHAN, B. WEINER, M. FERRARI and E. TASCIOITI, Houston Methodist Research Institute, USA	374
16.1	Introduction	374
16.2	The biology of cancer	375
16.3	Current therapeutics	380
16.4	Mesoporous silicon and therapeutic applications	383
16.5	Conclusions and future trends	391
16.6	References	392
17	Porous silicon for tumour targeting and imaging J.-H. PARK, Korea Advanced Institute of Science and Technology (KAIST), Republic of Korea	403
17.1	Introduction	403
17.2	Tumour targeting and imaging	404
17.3	Preparation of PSi particles	405
17.4	PSi particles for <i>in vivo</i> tumour targeting	410
17.5	PSi particles for <i>in vivo</i> tumour imaging	413
17.6	Conclusions and future trends	415
17.7	References	416
18	Porous silicon–polymer composites for cell culture and tissue engineering applications S. J. P. McINNES and N. H. VOELCKER, University of South Australia, Australia	420
18.1	Introduction	420
18.2	Fundamentals of porous silicon (PSi) and PSi/polymer composite fabrication and functionalization	423

18.3	PSi/polymer composites	427
18.4	Polymers for tissue engineering	435
18.5	The grafting of biopolymers to PSi	437
18.6	PSi and tissue engineering	438
18.7	Applications of PSi-polymer composites in tissue culture and bioengineering	446
18.8	Conclusions and future trends	451
18.9	Sources of further information and advice	452
18.10	Acknowledgement	453
18.11	References	454
19	Porous silicon and related composites as functional tissue engineering scaffolds	470
	<i>J. L. COFFER, Texas Christian University, USA</i>	
19.1	Introduction	470
19.2	Role of porous silicon (PSi) biodegradability	471
19.3	Strategies for PSi/polymer composite formulation	472
19.4	Studies related to orthopedic tissue engineering	476
19.5	Conclusions and future trends	480
19.6	References	482
20	Porous silicon scaffolds for stem cells growth and osteodifferentiation	486
	<i>P.-Y. COLLART DUTILLEUL, D. DEVILLE DE PÉRIÈRE and F. J. CUISINIER, UFR Odontologie, France, F. CUNIN, Institut Charles Gerhardt Montpellier, France and C. GERGELY, Montpellier 2 University, France</i>	
20.1	Introduction	486
20.2	<i>Stem cells for bone tissue engineering: adult, neonatal and embryonic stem cells (ESCs)</i>	487
20.3	Stem cells osteogenic differentiation and bone formation	490
20.4	Influence of pore size, nanoroughness and chemical surface treatment	494
20.5	Growth factors delivery and Si effects on osteodifferentiation	499
20.6	Conclusions and future trends	502
20.7	References	503
