Introduction	xi
1. Solar Radiation—Fundamentals	1
1.1 Terminology	1
1.2 Solar Energy	4
1.3 Radiation Transmission through the Atmosphere	6
1.4 Longwave Radiation: Greenhouse Effect	13
1.5 The Sky Temperature	15
1.6 Classification of Key Solar Energy Technologies	17
References	19
2. Availability of Solar Radiation on the Earth	21
2.1 Fundamentals of Spherical Geometry of the Earth in Relation to the Sun	21
2.2 Solar Radiation Measurement	33
2.3 Solar Radiation Data and Models	35
2.4 Determining Solar Irradiation of Arbitrarily Situated Surfaces	37
2.4.1 Radiation Components	37
2.4.2 Isotropic Radiation Model	38
2.4.3 Anisotropic Radiation Model	43
2.5 Impact of Surroundings on Solar Radiation Availability	46
2.5.1 Shading	46
2.5.2 Sun Charts	52
2.5.3 Reflectance of Elements in Surroundings	58
References	59
3. Shaping Building Envelope with Regard to Incident Solar Radiation	63
3.1 General Recommendations	63
3.2 Description of Solar Radiation Data Used for Considerations	67
3.3 Comparison of Results of Calculation of Solar Irradiation on Surfaces Differently Situated Using Isotropic and Anisotropic Solar Radiation Model	70

3.4	Solar Irradiation of Surfaces Differently Situated in the Considered Location	74
3.5	Irradiation of an Extended Southern Facade	79
3.6	Recommendations for Shaping Building Envelope with Regard to Solar Energy Availability	85
	References	95
4.	Photothermal Conversion in a Building	97
4.1	Use of Photothermal Conversion in a Building	97
4.2	Fundamentals of Radiation Processes in Photothermal Conversion	98
4.2.1	Absorption, Reflection and Transmission of Solar Radiation	98
4.2.2	Thermal Radiation Emission	102
4.2.3	Radiation Transmission Through Transparent Media	104
4.3	Analysis of Phenomena Occurring in Solar Energy Receivers	114
4.3.1	Simplified Heat Balance of Any Solar Energy Receiver	114
4.3.2	Transparent Covers	116
4.3.3	System of Transparent Cover and Absorbing Surface	121
4.3.4	Influence of the Absorbing Surface Type on Solar Energy Collection on Selective Surfaces	125
4.4	Heat Transfer between the Solar Energy Receiver and Ambient Surrounding	128
	References	130
5.	Passive Utilization of Solar Energy in a Building	133
5.1	Reduction of Building Energy Consumption	133
5.2	Passive Solar Systems	138
5.2.1	Classification of Passive Solar Systems	138
5.2.2	Direct Solar Gain Systems	139
5.2.3	Indirect Solar Gain Systems	141
5.2.4	Indirect Solar Gain Systems with Buffer Spaces	145
5.3	Selected Building Solar Technologies	153
5.3.1	Research of Processes in Passive Solar Systems in Buildings	153
5.3.2	Selected Glazing Technologies	155
5.3.3	Transparent Insulation Technologies	160
5.3.4	Phase-Change Materials	164
	References	169

6.	Energy Balance of a Building with Regard to Solar Radiation Exposure	173
6.1	Formulation of Energy Balance of Rooms in a Building	173
6.1.1	Energy Balance of a Building	173
6.1.2	Heat Transfer through a Wall in a Steady-State	175
6.1.3	Some Simplified Forms of Heat Balance of a Building	183
6.2	Dynamics of Processes in Opaque Walls and Surroundings, Including the Impact of Solar Radiation	187
6.2.1	Extension of General Form of the Energy Balance Equation	187
6.2.2	Dynamics of Heat Transfer through Opaque Envelope Elements	190
6.2.3	Heat Exchange with Surroundings through Building Envelope in Unsteady State	191
6.2.4	Selected Examples of Unsteady Heat Transfer through Opaque Envelope Elements	197
6.3	Dynamics of Energy Flow through Transparent Elements of a Building Envelope	225
6.3.1	General Discussion	225
6.3.2	Fundamentals of Energy Transfer through Glazing	227
6.3.3	Heat Transfer Coefficients of a Gas Gap between Panes	232
6.3.4	Description of Complex Phenomena of Energy Flow through Glazing	234
6.3.5	Heat Flow through the Frame	238
6.3.6	Some Examples of Unsteady Energy Flow through Windows	240
6.4	Analysis of Simulation Results of Energy Balances of Some Rooms of a Building	251
6.4.1	The Method Applied to Solve Problems	251
6.4.2	Heating and Cooling Demand of Selected Rooms	252
6.4.3	Final Conclusions on Heat Balance of Selected Rooms of a Building	279
	References	286
7.	Active Solar Systems in Buildings	289
7.1	Main Applications of Active Solar Systems	289
7.1.1	Basic Concepts of Solar Heating Systems	289
7.1.2	Development of Solar Heating Systems	290
7.2	Types, Functions and Operation of Active Solar Heating Systems	295
7.2.1	Main Types of Active Solar Systems	295
7.2.2	Basic Configurations of Active Solar Systems	300

7.3	Solar Collectors	308
7.3.1	Main Types of Solar Collectors	308
7.3.2	Flat-Plate Collector	309
7.3.3	Evacuated Collector	315
7.3.4	Other Collector Types	319
7.3.5	Thermal Characteristics of Solar Collectors	323
7.4	Application of Photovoltaics in Buildings	329
7.4.1	Physical Fundamentals of the Internal Photovoltaic Effect	329
7.4.2	Technologies of Solar PV Systems	332
7.4.3	Application of PV Systems in Buildings	336
7.5	Solar Cooling	338
7.5.1	Possible Applications	338
7.5.2	Solar Cooling and Air Conditioning Technologies	339
7.5.3	Development Prospects for Solar Cooling Technologies	345
	References	349
8.	Buildings “Aware” of Solar Energy Impact: Summary	353
