Foreword v

1. The Absolute Truth 1

1.1 Final Truth 1
1.2 Two Important Questions 2
1.3 Why Does the Cosmos Exist? 2
1.4 Are the Laws of Nature Independent of the Observer's Own Nature? 4
1.5 Self-Indulgence was Dominant 5
1.6 Newton's Mechanics and Its Overestimation . . . 7
1.6.1 Instead of Gods, Capricious Fairies etc. We Have the Equations of Motion 7
1.6.2 Lamettrie and the Monistic Picture of Man 8
1.6.3 Conclusion 11
1.7 Scientific Realism 11
1.8 An Important Principle: As Little Outside World as Possible 14
1.9 Inside World and Outside World 17
1.9.1 One-to-One Correspondence? 17
1.9.2 Cinema and Cinema Ticket 18
1.9.3 Summary 20
1.10 Principal Questions 20
1.10.1 Are Picture-Independent Physical Considerations Possible? 21
1.10.2 Why Do We and the Cosmos Exist? . . . 21
1.11 How Does Science Progress? 22

1.11.1 Science Progresses by Eliminating the Number of Unanswered Questions . . . 22
1.11.2 Principle of Propagation of Questions . . 22
1.11.3 Substitution Instead of Successive Refinement 25
1.11.4 Summary 29
1.12 Final Remarks 29

2. The Projection Principle **33**

2.1 The Elements of Space and Time 33
2.2 Relationship between Matter and Space–Time . . 34
2.3 Two Relevant Features 35
2.3.1 Feature 1 35
2.3.2 Feature 2 35
2.4 Two Kinds of "Objects" 37
2.5 Perception Processes 38
2.5.1 The Experiment with Inverting Goggles 39
2.5.2 Space and Time Come into Existence by Specific Brain Functions 40
2.6 Inside World and Outside World 42
2.7 The Influence of Evolution 43
2.8 Information in the Picture Versus Information in Basic Reality (Outside Reality) 45
2.9 Other Biological Systems 47
2.10 How Many (Geometrical) Objects can be in Space–Time? 49
2.11 Two Types of Space–Time? 51
2.12 Summary 52

3. Fictitious Realities **53**

3.1 Conventional Quantum Theory: Critical Remarks 54
3.1.1 A Diversity of Opinion 54
3.1.2 Some Specific Problems within Conventional Quantum Theory 55

3.2 The Projection Principle in Connection with Fictitious Realities . . . 57
3.2.1 Alternative Realities . . . 57
3.2.2 Relationships . . . 59
3.2.3 Sequences . . . 62
3.3 Distribution of Information . . . 63
3.4 Basic Transformation Effects . . . 66
3.4.1 Particles . . . 66
3.4.2 Role of Time t . . . 68
3.4.3 Non-Local Effects . . . 68
3.4.4 Conclusion . . . 69
3.5 Pictures within Projection Theory . . . 70
3.6 Auxiliary Constructions . . . 72
3.6.1 Energy within Conventional Physics . . . 72
3.6.2 The Physical Laws of Basic Reality . . . 73
3.6.3 Remark . . . 74
3.7 Basic Laws . . . 75
3.7.1 Stationary Case . . . 75
3.7.2 Non-Stationary Case . . . 76
3.7.3 Discussion . . . 77
3.8 Extension of Conventional Quantum Theory . . . 78
3.9 Only Processes are Relevant! . . . 80
3.9.1 Free Systems . . . 80
3.9.2 Principle of Usefulness . . . 81
3.9.3 Real Situation . . . 83
3.9.4 Summary . . . 83
3.10 Interactions . . . 84
3.10.1 What Does Interaction Mean within Projection Theory? . . . 85
3.10.2 Delocalized Systems in $(\mathbf{p}, E)$-Space . . . 87
3.10.3 Abstract Interaction Laws . . . 87
3.11 Distance-Independent Interactions . . . 88
3.11.1 General Remarks . . . 88
3.11.2 Principal Analysis . . . 89
3.11.3 Basic Equations in the Case of Distance-Independent Interactions . . . 95

3.11.4 No Exchange of "Space–Time Pieces" . . 96
3.12 Arbitrary Jumps within $(\mathbf{r}, t)$-Space 98
3.12.1 The $(\mathbf{p}, E)$-Distributions 99
3.12.2 Effective Velocities 100
3.13 Mach's Principle: Preliminary Remarks 103
3.13.1 The Situation in Conventional Physics 103
3.13.2 The Situation within Projection Theory 105
3.14 Can a Lone, Elementary Object Exist in the Cosmos? 105
3.15 The Meaning of the Potential Functions 107
3.15.1 Interaction within Conventional Physics 108
3.15.2 Interaction within Projection Theory . . 109
3.15.3 Further Remarks 110
3.15.4 Conventional Physics: What Mechanism is Behind the Interaction? 111
1. "Action-at-a-distance" 112
2. Proximity effect 112
3.15.5 Equivalent Conceptions 113
3.15.6 The Mechanical-Corpuscular World View 114
3.15.7 "Spring" between the Masses 118
3.15.8 Conclusion 119
3.15.9 The Statements of Projection Theory . . 120
3.15.10 Interaction: Final Remarks 121
3.16 Time 123
3.16.1 Properties of Probability Distributions 123
3.16.2 The System-Specific Time 127
3.16.2.1 Reference Time and Selection Processes 127
3.16.2.2 Structure of Reference Time 130
3.16.2.3 Selections 132

3.16.3 Information Inside, Information Outside 133
3.16.4 Reality Outside 136
3.16.5 Constancy Phenomena 137
3.16.6 Information in Connection with Space–Time Points 137
3.16.7 Time within Special Theory of Relativity 139
3.17 Time Travel in Physics 144
3.17.1 Time Travel to the Past within the Theory of Relativity 145
3.17.1.1 Paradoxes 145
3.17.1.2 Shaking Hands with the Younger Self 147
3.17.2 Physical Solutions 148
3.17.2.1 Two Relevant Interpretations of Conventional Quantum Theory 148
3.17.2.2 Argument of Self-Consistency 151
3.17.2.3 Chronology Protection Conjecture 152
3.17.3 Time Travel within Projection Theory . . 153
3.17.3.1 Reference Time Structures for N Observers 153
3.17.3.2 Situation in Conventional Physics (Newton's Mechanics) 155
3.17.3.3 Observations and Descriptions 157
3.17.3.4 Only the Material Part of an Observer is Depictable in $(\mathbf{r}, t)$-Space 159
3.17.3.5 Two Kinds of Selection 161
3.17.3.6 Local Changes 161
3.17.3.7 Time Shifts 164
3.17.3.8 Decoupling of Subsystems . . 167

3.17.3.9 Configurations at Various Times 169
3.17.4 Final Remarks 171
3.18 Summary 172

4. Basic Reality and Levels of Reality **179**

4.1 Hard Objects 179
4.1.1 Outside World and Basic Reality 179
4.1.2 The "Hard Objects" are Elements of the Brain 180
4.2 General Physical Laws 181
4.2.1 The Hard Objects in Front of us and the Physical Laws are Equally States of the Observer's Brain 181
4.2.2 Specific Models 182
4.2.3 Can a General Physical Law be Deduced from its Specific Solutions? 184
4.2.4 States of Matter, States of Mind 185
4.2.4.1 What Can a Specific System "see"? 185
4.2.4.2 Conclusion 186
4.2.4.3 Atoms with Mind? 187
4.2.4.4 Level of General Arguments . 188
4.2.4.5 Levels of Reality 188
4.3 States of Mind 190
4.3.1 Brain Functions 190
4.3.2 Conclusion: The "States of Mind" cannot be described by the "States of Matter" . 191
4.4 Outside World and Basic Reality 192
4.4.1 Descriptions and Observations 192
4.4.2 Everyday Life Experiences 193
4.4.3 Other Levels of Reality 196
4.4.3.1 Level of Macroscopic Objects 197
4.4.3.2 Level of Basic Rules 197

4.4.3.3 Level of Technological Developments 199
4.4.3.4 The Various Levels Represent States of the Brain 200
4.5 Objectivation Processes 201
4.5.1 Objectivation by Thinking (Conscious Objectivation) 201
4.5.2 Constancy Phenomena (Unconscious Objectivation) 202
4.5.3 Conclusion 203
4.6 Observations 203
4.6.1 Objects on Various Levels 203
4.6.2 Levels of Observations 204
4.6.3 Other Biological Systems 205
4.6.4 Concluding Statements 206
4.7 No Interactions within $(\mathbf{r},t)$-Space 206
4.7.1 Classical Mechanics and Usual Quantum Theory become mere Calculation Schemes 207
4.7.2 An Example 207
4.7.3 Application of the Results Deduced in Projection Theory 208
4.7.4 Conclusion 209
4.8 The General cannot be Deduced from the Particular 210
4.8.1 Concept of Induction 210
4.8.2 New Ideas are Needed 210
4.8.3 Where do Ideas come from? 211
4.8.4 Positivism 211
4.8.5 Groping in all Directions 214
4.8.6 The Viewpoint of Usual Physics 215
4.8.7 The Viewpoint of Projection Theory . . 215
4.9 Remarks on the Notion "World Equation" 219
4.9.1 Situation within Projection Theory . . . 220
4.9.2 World Equation within Usual Physics 220

4.9.3 World Equation within Theory of Science 221
4.10 On the Anthropic Principle 223
4.10.1 Everything Seems to Revolve around Man 223
4.10.2 Measurements 225
4.10.3 Human-specific Information and Measurement 226
4.10.4 Evolutionary Processes and Level Analysis 228
4.10.5 Conclusion 231
4.10.6 Anthropic Principle: Solutions within usual Physics 232
4.11 Summary 233

5. Cosmological Constant and Physical Reality 239

5.1 Introductory Remarks 239
5.2 The Cosmological Constant 241
5.2.1 Quantum Field Theoretical Calculation of Λ 241
5.2.2 Emptying the Vacuum!? 243
5.2.3 Important Experimental Findings and Mechanisms 243
5.2.4 Proposals for the Elimination of the Vacuum Energy 246
5.2.4.1 Fine-Tuning 246
5.2.4.2 Supersymmetry 247
5.2.4.3 Strings 247
5.2.4.4 Worm Holes 247
5.2.4.5 Projection Theory 248
5.2.5 Another Peculiarity: Two Types of Energy 248
5.2.6 Concluding Remarks Concerning Λ . . . 249
5.3 Critical Remarks on Basic Quantum Theory . . . 251

5.3.1 Basic Elements for Vacuum Description 251
5.3.2 Remarks Concerning Special Theory of Relativity 252
5.3.3 Remarks Concerning Usual Quantum Theory 253
5.3.4 Specific Problems 255
5.3.4.1 Schrödinger's Equation 255
5.3.4.2 On the Symmetry between Space and Time 257
5.3.4.3 Bunge's Critique 259
5.3.4.4 Conclusion and Outlook . . . 260
5.4 Projection Theory and the Emptying of Space–Time 262
5.4.1 The Basic Principle 262
5.4.2 Projections from Alternative Realities onto Space–Time 263
5.4.2.1 Other Spaces, Fourier-Space 264
5.4.2.2 Reality and its Picture 265
5.4.3 Further Basic Properties 266
5.4.4 Uncertainty Relation for Time and Energy within Projection Theory 269
5.4.4.1 Mean Values 269
5.4.4.2 Shift of the Wavefunctions . . 271
5.4.4.3 Formulation of the Uncertainty Relation for Time and Energy 275
5.4.5 Cosmological Constant within Projection Theory 279
5.5 Artificial Vacuum Effects!? 280
5.5.1 Mach's Principle 282
5.5.1.1 Empty Space within General Theory of Relativity 282
5.5.1.2 The Effect of Inertia 283

5.5.1.3 Where Does Inertia Come From? 283
5.5.2 Basic Features of Space and Time 287
5.5.2.1 Facts 287
5.5.2.2 Einstein's Substratum-Idea . . 288
5.5.3 Conclusion 292
5.6 On the Observation of Physically Real Processes 293
5.6.1 Reality Outside and the Inner Picture . . 294
5.6.1.1 The Color Experiment 295
5.6.1.2 What is Outside, What is Inside? 296
5.6.2 Effects of Evolution and Basic Reality 297
5.6.3 Kant's Philosophy 298
5.6.3.1 Remarks on Newton's View 302
5.6.3.2 Consequences 303
5.7 Curved Spaces 304
5.7.1 Re-Interpretation 305
5.7.2 Metric within Projection Theory 310
5.7.3 Poincaré 310
5.7.4 What Geometry is Realized? 312
5.7.4.1 The Brain Processes on the Basis of Euclidean Geometry 312
5.7.4.2 Geometrical Optics 314
5.7.4.3 Experiment with Distorting Glasses 314
5.7.4.4 Constancy Phenomena 315
5.7.5 D'Arcy Wentworth Thompson 317
5.7.5.1 Some General Remarks 318
5.7.5.2 Fishes 318
5.8 Flatness and Horizon Problem 325
5.8.1 Flatness Problem 325
5.8.2 Horizon Problem 325
5.9 Summary 328

6. Final Remarks **333**

Appendix A On the Registration of Events within Projection Theory **347**

A.1 Equivalencies 347
A.2 No Material Objects in Space (Space–Time) . . . 349

Appendix B The Classical Case **351**

B.1 Probability Densities 351
B.2 Probabilities 353
B.3 Transformations in the Classical Limit 353
B.4 Classical Projections 355
B.5 Information Content of the Different Spaces . . . 357
B.6 The Relationship between the Classical Variables $\mathbf{r}_0, t_0, \mathbf{p}_0, E_0$ 359
B.7 Applications 363
B.8 On the Classical Equations of Motion: Some General Remarks 365
B.8.1 Free, non-interacting Systems 366
B.8.2 The Parameter m_0 367
B.8.3 Complex Systems 368
B.8.4 Concluding Remarks 368
