List of Contributors *XI*

Preface *XIII*

Acknowledgments *XV*

1	Fuels and Combustion	1
	<i>Bengt Johansson</i>	
1.1	Introduction	1
1.2	The Options	1
1.3	Spark Ignition	2
1.3.1	Uncontrolled SI Combustion, Knock	3
1.3.2	Autoignition of SI Engine Fuel	4
1.3.3	Physical Properties of SI Engine Fuel	7
1.4	Compression Ignition	7
1.4.1	Autoignition of CI Engine Fuel	8
1.4.2	Physical Properties of CI Engine Fuel	9
1.5	Highly Diluted Autoignition, HCCI	9
1.5.1	Autoignition of HCCI Engine Fuel	11
1.5.2	Physical Properties of HCCI Engine Fuel	12
1.5.3	HCCI Fuel Rating	14
1.6	Other Combustion Concepts	14
1.6.1	Spark-Assisted Compression Ignition, SACI	14
1.6.1.1	Chemical Properties	16
1.6.1.2	Physical Properties	16
1.6.2	Partially Premixed Combustion, PPC	16
1.6.2.1	Chemical Properties	17
1.6.2.2	Physical Properties	18
1.6.3	Reactivity-Controlled Compression Ignition, RCCI	18
1.6.3.1	Chemical Properties	18
1.6.3.2	Physical Properties	19
1.6.4	Dual-Fuel Combustion	19
1.6.4.1	Chemical Properties	21
1.6.4.2	Physical Properties	21
1.6.5	Prechamber SI Combustion	21

1.6.5.1	Chemical Properties	23
1.6.5.2	Physical Properties	23
1.6.6	Diesel Pilot Combustion	23
1.6.6.1	Chemical Properties	23
1.6.6.2	Physical Properties	23
1.7	Summary of Combustion Processes	25
	References	25

2 Fuel Class Higher Alcohols 29

S. Mani Sarathy

2.1	Introduction and Fuel Properties	29
2.1.1	Physical–Chemical Fuel Properties	30
2.1.2	Fundamental Combustion Properties	32
2.2	Performance in Spark-Ignition Engines	34
2.2.1	<i>n</i> -Butanol	38
2.2.2	<i>iso</i> -Butanol	40
2.2.3	<i>n</i> -Pentanol	40
2.3	Performance in Compression-Ignition Engines	41
2.3.1	<i>n</i> -Butanol	41
2.3.2	<i>iso</i> -Butanol	47
2.3.3	<i>n</i> -Pentanol	48
2.3.4	<i>n</i> -Octanol	50
2.4	Production Pathways	50
2.4.1	<i>n</i> -Butanol	51
2.4.2	<i>n</i> -Octanol	52
2.5	Outlook	54
2.6	Conclusions	54
	References	55

3 Fuel Class Valerates 59

Christine Mounaïm-Rousselle, Fabien Halter, Fabrice Foucher, Francesco Contino, Guillaume Dayma, and Philippe Dagaut

3.1	Introduction and Fuel Properties	59
3.1.1	Origins of Valerate Molecules	59
3.1.2	Valerates as Fuel for Internal Combustion Engines	60
3.1.3	Kinetic Properties of Valerate Fuels	62
3.2	Performance in Spark-Ignition Engines	64
3.2.1	Global Performance of SI Engine Fueled with Valerate Blend and Pure Valerates	65
3.2.2	Specific Consumptions and Nonregulated Pollutant Emissions for Pure Valerates	68
3.3	Performance in Compression-Ignition Engines	73
3.4	Production Pathways	77

3.5	Outlook	80
3.6	Conclusions	81
	Acknowledgments	82
	Abbreviations	82
	References	82
4	Butyl Ethers and Levulinates	87
	<i>Florian Kremer and Stefan Pischinger</i>	
4.1	Introduction and Fuel Properties	87
4.2	Performance in Compression-Ignition Engines	89
4.2.1	DNBE	89
4.2.2	Levulinates	92
4.3	Production Pathways	98
4.3.1	DNBE	98
4.3.2	Levulinates	100
4.4	Outlook	101
4.5	Conclusions	102
	References	103
5	A Comprehensive Review of 2,5-Dimethylfuran as a Biofuel Candidate	105
	<i>Hongming Xu and Chongming Wang</i>	
5.1	Introduction to DMF	105
5.2	Production Pathways	107
5.3	Performance in Spark-Ignition Engines	112
5.3.1	Direct Combustion Comparison	112
5.3.2	Advanced Injection Strategies	117
5.3.3	Gaseous Emissions	118
5.3.4	PM and Soot Emissions	119
5.4	Performance in Compression-Ignition Engines	122
5.5	Outlook	124
5.6	Conclusions	126
	Abbreviation and Notation	126
	References	127
6	Furanoids	131
	<i>Florian Kremer, Benedikt Heuser, and Stefan Pischinger</i>	
6.1	Introduction and Fuel Properties	131
6.2	Performance in Spark-Ignition Engines	132
6.2.1	2-MF	132
6.2.2	2-MTHF	141
6.3	Performance in Compression-Ignition Engines	145
6.3.1	2-MTHF	145

6.4	Production Pathways	150
6.4.1	2-MF	150
6.4.2	2-MTHF	151
6.5	Outlook	154
6.6	Conclusions	155
	References	155

7 Benzenoids 159

Michael Boot

7.1	Introduction	159
7.2	Overview of Neat Fuel properties	160
7.3	Performance in Compression-Ignition Engines	160
7.3.1	Anisole versus Higher Cetane Number Oxygenates	160
7.3.2	Anisole, Benzyl Alcohol, and 2-Phenyl Ethanol	162
7.3.3	2-Phenylethanol versus Cyclohexane Ethanol	165
7.3.4	Anisole versus Ethanol	167
7.3.5	Acetophenone, Benzyl Alcohol, and 2-Phenyl Ethanol	167
7.3.6	Anisole in Combination with Di- <i>n</i> -Butyl Ether	167
7.4	Performance in Spark-Ignition Engines	168
7.4.1	Methyl Aryl Ethers	168
7.4.2	Acetophenone, Benzyl Alcohol, and 2-Phenyl Ethanol	171
7.4.3	Miscellaneous	172
7.5	Production Pathways	174
7.5.1	Hydrothermal Processing	175
7.5.2	Solvolysis	178
7.5.3	Catalytic Solvolysis	179
7.6	Outlook and Conclusions	183
7.6.1	Most Attractive Benzenoid Biofuel Candidates	183
7.6.2	Economic Viability of Lignin-Based Benzenoid Biofuels	186
	References	186

8 Biomass Pyrolysis Oils 189

Robert L. McCormick, Robert M. Baldwin, Stephen Arbogast, Don Bellman, Dave Paynter, and Jim Wykowski

8.1	Introduction and Fuel Properties	189
8.2	Performance Spark-Ignition Engines	192
8.3	Performance in Compression-Ignition Engines	192
8.4	Production Pathways from Pyrolysis Oil	194
8.4.1	Upgrading Biomass Pyrolysis Oil	194
8.4.2	Integrating Pyrolysis Oil into Standard Refineries	194
8.4.3	Economic Challenges and Potential for Cost Savings	197
8.4.4	Incentives for Relaxing the Bio-oil Refining Oxygen Constraint: A Base Case	198
8.4.5	Performance of PUBO Blends in the Major Refinery Conversion/Upgrading Processes	200

8.4.5.1	Hydrocracking	200
8.4.5.2	Catalytic Cracking	201
8.5	Outlook	202
8.6	Conclusions	203
	References	203
	Index	209
