List of Contributors	xiii	Conclusion	19
Introduction to the Molecular Basis of Nutrition and Aging	xix	References	19
Series Preface	xxiii	3. Nutrigenomics and Nutrigenetics: The Basis of Molecular Nutrition	21
Acknowledgments	xxv	JEAN-BENOIT CORCUFF AND AKSAM J. MERCHED	
I			
INTRODUCTORY ASPECTS ON AGING AND NUTRITION			
1. Molecular and Cellular Basis of Aging	3	Introduction	21
SURESH I.S. RATTAN		Nutrigenetics of Omega-3 PUFA in CVD	22
Introduction	3	Nutrigenetics of Omega-3 PUFA in Cancer	24
Biological Principles of Aging	4	DNA Damage and Nutrients	25
Occurrence, Accumulation, and Consequences of Molecular Damage	4	Cellular Senescence and Nutrients	27
Homeodynamics and the Homeodynamic Space	5	Epigenetics and Nutrients	27
Nutrition and Food for Aging Interventions	6	Summary Points	28
Nutritional Hormetins	6	References	28
Conclusions	7	4. Diet and Longevity Phenotype	31
Summary Points	7	FRANCESCO VILLA, CHIARA CARMELA SPINELLI AND ANNIBALE A. PUCA	
References	7	Introduction	31
2. Unraveling Stochastic Aging Processes in Mouse Liver: Dissecting Biological from Chronological Age	11	Main Text	32
L.W.M. VAN KERKHOFF, J.L.A. PENNING, T. GUICHELAAR, R.V. KUIPER, M.E.T. DOLLÉ AND H. VAN STEEG		Summary	37
Introduction	12	References	38
Pathological Parameters Are Only Partially Associated with Chronological Age	13	5. Nutrition in the Elderly: General Aspects	41
Intraorgan Specific Biological Phenotypes	15	EUGENIO MOCCHEGIANI	
Tissue-Specific Biological Phenotypes	16	Introduction	43
Gene Expression Profiles Related to Pathological Aging Parameters	16	Malnutrition in the Elderly: Definition and General Aspects	44
Gene Expression Profiles Correlating with Pathological Parameters Are Largely Specific to the Pathological Parameters	16	Causes of Malnutrition in the Elderly	45
Future Perspectives	18	Malnutrition: Possible Correction with Supplements in the Elderly	46
	18	Nutrient-Sensing Pathways	47
		Nutrient-Gene Interaction in the Elderly (Nutrigenomic Approach)	49
		Conclusions and Perspectives	50
		Summary Points	51
		Acknowledgments	52
		References	52
		6. Nutrition in the Hospitalized Elderly	57
		WAFAA MOSTAFA ABD-EL-GAWAD AND DOHA RASHEEDY	
		Introduction	57
		Pathogenesis of Malnutrition in Hospitalized Elderly	58

Why Are Hospitalized Older Adults Nutritionally Vulnerable?	58
Clinical Consequences of Malnutrition in Hospital	60
Malnutrition Screening and Assessment in Hospitalized Elderly	61
Management of Hospitalization-Associated Malnutrition Postdischarge Plan	64
	67
Nutritional Issues in Special Groups of the Hospitalized Elderly Population	68
Recommendations	69
Conclusion	69
Summary	69
References	70
7. Drug–Nutrient Interactions in the Elderly	73
SULAIMAN SULTAN, ZOE HEIS AND ARSHAD JAHANGIR	
Introduction	75
Types of Drug–Nutrition Interactions	75
Factors Affecting DNI in the Elderly	79
Effect of Drugs on Nutritional Status in Elderly	82
Drug Interactions with Vitamins Supplements in the Elderly	82
Drug–Herb Interactions in the Elderly	95
DNI in the Elderly: Challenges and Future Directions	95
Summary	103
References	104
8. Nutritional Biomarkers of Aging	109
ANNE SIEPELMEYER, ANTJE MICKA, ANDREAS SIMM AND JÜRGEN BERNHARDT	
Introduction	109
The Antioxidant Network	110
Discussion	114
Nutritional Biomarkers of Aging	116
Conclusion	118
Summary	118
References	119
9. Food Preferences in the Elderly: Molecular Basis	121
LORENZO M. DONINI, ELEONORA POGGIORGALLE AND VALERIA DEL BALZO	
Introduction: The Concept of Nutritional Frailty	121
Physiological Modifications Leading to Reduced Energy and/or Nutrient Intake	122
Modifications of Chemosensory Functions and Food Preferences in the Elderly	123
Modifications of Clinical and Nutritional Status Leading to Changes in Food Preferences	123
Other Determinants of Food Choice and Conclusions	124
Summary	124
References	125

II

MOLECULAR AND CELLULAR TARGETS

10. Telomeres, Aging, and Nutrition	129
VARINDERPAL DHILLON, CAROLINE BULL AND MICHAEL FENECH	
Introduction	129
Telomeres and Aging	131
Nutrition and Telomeres	132
Knowledge Gaps	137
Conclusion	137
Summary	137
References	137
11. mTOR, Nutrition, and Aging	141
GIUSEPPE D'ANTONA	
Mechanistic Target of Rapamycin	141
Nutrients and Energy Status as Upstream Regulators of mTORC1 and mTORC2	142
Downstream Targets of mTORC1 and mTORC2	147
mTOR in Senescence	149
Effects of mTORC1 in Age-Related Diseases	150
Summary	152
References	153
12. Lipid Peroxidation, Diet, and the Genotoxicology of Aging	155
PETR GRÚZ	
Introduction	156
Flexible Fatty Acid Composition of Human Cells	156
Lipid Peroxidation and Its Consequences for Genome Stability	160
Protective Mechanisms Against Lipid Peroxidation	164
Resistance to Oxidative Damage in Long-Lived Species	166
Concluding Remarks	167
Summary	168
References	168
13. Accumulation of Damage Due to Lifelong Exposure to Environmental Pollution as Dietary Target in Aging	177
GABBIANELLI ROSITA, FEDELI DONATELLA AND NASUTI CINZIA	
Introduction	177
Xenobiotics	178
Pyrethroids	179
Acute and Chronic Exposure	180
Early Life Exposure and Long-Term Effects	180
Biomarkers of Damage	183
Summary	185
References	185

14. Nutritional Impact on Anabolic and Catabolic Signaling	189	17. The Controversy Around Sirtuins and Their Functions in Aging	227
MIKLÓS SZÉKELY, SZILVIA SOÓS, ERIKA PÉTERVÁRI AND MÁRTA BALASKÓ		YU SUN AND WEIWEI DANG	
Introduction	189	Introduction	228
Characteristic Age-Related and Diet-Induced Changes in Body Mass/Composition in Rats	191	Enzymatic Activities of Sirtuins	228
Peripheral Signaling, Central Processing	191	Sirtuins in Nonmammalian Model Organisms	228
Diet-Induced Changes of Body Mass/Composition	196	Mammalian Sirtuins	230
Conclusions	199	Does Overexpression of Sirtuins Extend Lifespan?	232
Acknowledgment	200	Do Sirtuins Mediate the Longevity Effects of Calorie Restriction?	234
Summary	200	Is Resveratrol a Sirtuin Activator?	234
References	200	Are Sirtuins Proto-Oncogenes or Tumor Suppressors?	235
		The Potential of Sirtuins as Therapeutic Targets	236
		Conclusions	237
		Summary	237
		Acknowledgments	237
		References	237
15. Aging and Its Dietary Modulation by FoxO1 Phosphorylation/Acetylation	205	18. DNA Damage, DNA Repair, and Micronutrients in Aging	243
DAE HYUN KIM, BYUNG P. YU AND HAE Y. CHUNG		MARÍA MORENO-VILLANUEVA	
Introduction	206	Introduction	243
Altered FoxO1 Target Genes During Aging and Their Modulation by CR	207	Conclusions	247
Epigenetic Influences on FoxO1	208	Summary	247
Modulation of FoxO1 by Calorie Restriction	209	References	248
Conclusion	210		
Summary	210	19. Neuroprotective Mechanisms of Dietary Phytochemicals: Implications for Successful Brain Aging	251
References	210	SERGIO DAVINELLI, GIOVANNI SCAPAGNINI, GUIDO KOVERECH, MARIA LUCA, CARMELA CALANDRA AND VITTORIO CALABRESE	
		Introduction	252
16. Epigenetic Responses to Diet in Aging	213	Oxidative Damage and Brain Aging	252
DIANNE FORD		Brain Inflammation as a Form of Oxidative Stress	253
Introduction	214	Neuroprotection of Phytochemicals in Brain Aging	254
Epigenetic Modification of the Mammalian Genome	214	Neuroprotective Phytochemicals and Modulation of Stress Signaling Pathways	256
Epigenetic Alterations Associated with Aging: Possible Functional Consequences and Relationship to a Global Signature of Aging	215	Conclusions	258
The Role of Environmental Versus Genetic Factors in Shaping Aging-Related Epigenetic Drift	217	Summary	259
The Impact of Diet on Epigenetic Alterations Associated with Aging	217	References	259
Epigenetic Actions of Specific Dietary Components and Practices	218		
Interrelationships Between Age-Associated and Diet-Induced Epigenetic Alterations	220	20. Nutritional Modulation of Advanced Glycation End Products	263
Potential Mechanisms Through Which Diet Could Induce Epigenetic Alterations That Protect Against Aging	221	MA. EUGENIA GARAY-SEVILLA, CLAUDIA LUEVANO-CONTRERAS AND KAREN CHAPMAN-NOVAKOFESKI	
The Functional Consequences of Stem Cell Aging and the Role of Epigenetic Alterations	222	Introduction	263
Sirtuins as Mediators of Diet-Induced Epigenetic Alterations That Counteract Aging	222	AGEs Formation In Vivo	264
The Utility of Epigenetic Alterations as a Nutritionally Modifiable Marker of the Aging Trajectory	223	Formation of Dietary AGEs	265
Summary	223	Methods for Measuring AGEs	265
References	223	Absorption, Metabolism, and Elimination of dAGEs	266
		Molecular Action	267
		AGEs and Normal Aging	268
		AGEs and Chronic Diseases Associated with Older Age	269

Dietary Interventions for dAGEs	271	Molecular Basis and Modifiable Risk Factors	316
Summary	273	of Cardiovascular Disease	316
References	273	Nutrients, Foods and ASCVD Risk Factors	316
		Functional Foods	322
		Dietary Patterns and Clinical Outcomes	324
21. miRNAs as Nutritional Targets in Aging	277	Medical Nutrition Therapy for Management	326
ROBIN A. MCGREGOR AND DAE Y. SEO		of Cardiovascular Risk Factors	326
Introduction	277	Summary	326
miRNA Biogenesis and Processing	278	References	327
Circulating miRNAs	278		
Aging Associated miRNAs in Different Tissues	279	24. The Influences of Dietary Sugar and Related	
Dietary Modification of miRNAs	280	Metabolic Disorders on Cognitive Aging	
miRNAs Modulated by Protein	280	and Dementia	331
miRNAs Modulated by Carbohydrates	280	SHYAM SEETHARAMAN	
miRNAs Modulated by Dietary Fat and Fatty Acids	281	Introduction	331
miRNA Modulation by Dietary Micronutrients	282	The Influence of Dietary Sugar on Brain and Cognitive	
miRNA Modulation by Vitamin D	282	Impairment	332
miRNA Modulation by Folate	283	Metabolic Disorders	334
miRNA Modulation by Vitamin A	283	Metabolic Disorders and Brain Aging	335
miRNA Modulation by Vitamin C	284	Dementia and Metabolic Disturbances	337
miRNA Modulation by Vitamin E	284	Diet and Brain Health	339
miRNA Modulation by Dietary Minerals	284	Conclusions	340
miRNA Modulation by Flavonoids	285	Final Remarks	340
miRNA Modulation by Polyphenols	285	Summary	340
miRNAs Modulated by Curcumin	286	References	341
miRNAs Modulated by Milk	286		
Conclusion	287	25. Dietary Factors Affecting Osteoporosis	
Summary	287	and Bone Health in the Elderly	345
Acknowledgments	287	PAWEL GLIBOWSKI	
References	287	Introduction	345
		Osteoporosis	345
22. Nutritional Modulators of Cellular Senescence		Dietary Reference Values for Calcium	346
In Vitro	293	Food Sources of Calcium	347
MAURO PROVINCIALI, ELISA PIERPAOLI, FRANCESCO PIACENZA,		Dietary Reference Values for Vitamin D	348
ROBERTINA GIACCONI, LAURA COSTARELLI, ANDREA BASSO,		Food Sources of Vitamin D	349
RINA RECCHIONI, FIORELLA MARCHESELLI, DOROTHY BRAY,		The Effect of Dairy Products on Osteoporosis	350
KHADIJA BENLHASSAN AND MARCO MALAVOLTA		Vitamin K and Bone Health	351
Introduction	294	Seminutritional Factors Affecting Osteoporosis and	
Cellular Senescence	294	Risk of Fractures	351
Cellular Senescence in Aging and Age-Related Diseases	296	Protein Consumption and Bone Health	352
Strategies to Target Cellular Senescence with Therapeutical		Future Trends	353
Perspective	297	Summary	353
Nutritional Factors and Cellular Senescence "In Vitro"	300	References	353
Comments and Conclusions	307		
Summary	308	26. The Aging Muscle and Sarcopenia:	
References	308	Interaction with Diet and Nutrition	355
		EMANUELE MARZETTI, RICCARDO CALVANI, MATTEO TOSATO	
		AND FRANCESCO LANDI	
		Introduction	355
23. Nutrition, Diet Quality, and Cardiovascular		Age-Related Changes in Dietary Intake and Eating Habits	356
Health	315	Nutritional Interventions Against Sarcopenia and Frailty:	
LI WANG, GEETA SIKAND AND NATHAN D. WONG		Preliminary Considerations	356
Introduction	315	Protein Supplementation: A Matter of Quantity and Quality	357
		Vitamin D	358

III

SYSTEM AND ORGAN TARGETS

Creatine	358	30. Nutritional Status in Aging and Lung Disease	411
Polyunsaturated Fatty Acids	358		
Amino Acid Metabolites and Precursors: β -Hydroxy 3-Methylbutyrate and Ornithine α -Ketoglutarate	359	R. ANTONELLI INCALZI, N. SCICCHILONE, S. FUSCO AND A. CORSONELLO	
Conclusion	359	Introduction	412
Summary	359	Nutrition and Lung Disease: Pathological Pathways	412
References	360	Nutritional Assessment for Pulmonary Disease	414
		Nutritional Intervention in Lung Disease	416
		Conclusions	418
		Summary Points	418
		References	419
27. Nutritional Status and Gastrointestinal Health in the Elderly	363		
LUZIA VALENTINI, AMELIE KAHL AND ANN-CHRISTIN LINDENAU			
Introduction	363	31. How Nutrition Affects Kidney Function in Aging	423
Enteric Nervous System	364		
Taste and Smell (Chemosensation)	364	CHRISTINA CHRYSOHOOU, GEORGIOS A. GEORGIPOULOS AND EKAVI N. GEORGUSOPOULOU	
The Anorexia of Aging	364	Introduction	424
Oropharyngeal Capacities and Swallowing	365	Renal Function in Aging	425
Esophagus, Achalasia, and Gastroesophageal Reflux Disease	365	Polyunsaturated Fatty Acids	426
Stomach, Gastric Emptying, Postprandial Hypotension, and Acid Secretion	366	Mediterranean Type of Diet	427
Small Bowel, Nutrient Absorption, and Small Intestinal Permeability	366	Hyperuricemia and Diet	428
Colon, Constipation, and Gut Microbiota	368	Polyphenols and Renal Function	429
Conclusion	369	Summary	430
Summary	370	References	430
References	371		
		32. The Role of Nutrition in Age-Related Eye Diseases	433
		BAMINI GOPINATH	
		Age-Related Changes in the Eye	433
		Degenerative Eye Diseases	434
		The Relationship Between Nutrition and Healthy Ocular Structure and Function	436
		Antioxidants and Age-Related Eye Diseases	436
		Conclusions and Recommendations	442
		Summary	442
		References	443
28. Can Nutritional Intervention Counteract Immunosenescence in the Elderly?	375		
SARAH J. CLEMENTS AND SIMON R. CARDING			
Introduction	375		
Aging and the Innate Immune System	376		
Aging and the Adaptive Immune System	377		
Targets of Nutritional Intervention	379		
Can Nutrition Impact on Immune Components Affected by Age?	380		
Conclusions	386		
Summary	386		
References	386		
29. Glucose Metabolism, Insulin, and Aging: Role of Nutrition	393		
MASSIMO BOEMI, GIORGIO FURLAN AND MARIA P. LUCONI			
Alpha and Beta Cell Mass	394		
Insulin Secretion, Metabolism, and Clearance	394		
Insulin Action	396	33. Vitamin D Nutrient-Gene Interactions and Healthful Aging	449
A Link Between Insulin and Central Nervous System Aging: Brain Insulin Resistance	398		
Preventing Glucose Metabolism Alteration	400	MARK R. HAUSSLER, RIMPI K. SAINI, MARYA S. SABIR, CHRISTOPHER M. DUSSIK, ZAINAB KHAN, G. KERR WHITFIELD, KRISTIN P. GRIFFIN, ICHIRO KANEKO AND PETER W. JURUTKA	
Nutrition and Aging	402	Vitamin D: From Nutrient to Tightly Regulated Hormone	449
Conclusions	403	The Kidney Is the Nexus of Healthful Aging	451
Summary	403

 HEALTH EFFECTS OF DIETARY COMPOUNDS AND DIETARY INTERVENTIONS

Mechanism of Gene Regulation by Liganded VDR VDR-Mediated Control of Networks of Genes Vital for Healthful Aging	452	37. Iron Metabolism in Aging	523
Conclusion and Perspectives	454	LAURA SILVESTRI	
Summary	465	Introduction	524
References	467	Dietary Iron and Intestinal Iron Absorption	525
		Regulation of Cellular Iron Homeostasis	525
		Regulation of Systemic Iron Homeostasis	527
		Deregulation of the Hepcidin-Ferroportin Axis	530
		Iron Homeostasis and Hepcidin in the Elderly	532
34. Carotenoid Supplements and Consumption: Implications for Healthy Aging	473	Future Perspective	534
KARIN LINNEWIEL-HERMONI, ESTHER PARAN AND TALYA WOLAK		Summary	534
Introduction	473	Acknowledgments	534
Structure and Function	474	References	534
Carotenoids and Oxidative Stress	474		
Carotenoids and Vascular Health and Atherosclerosis	475	38. Dietary Mineral Intake (Magnesium, Calcium, and Potassium) and the Biological Processes of Aging	537
Effect of Carotenoids on Skin Aging	478	NICOLAS CHERBUIN	
Carotenoids and Cancer Prevention	480	Introduction	537
Conclusions	484	Dietary Intake and Biological Mechanisms Implicated in the Aging Process	538
Summary	484	Dietary Intake and Cardiovascular and Metabolic Effects	540
Acknowledgment	484	Dietary Intake and Brain Aging	543
References	484	Dietary Intake and Cognitive Aging	545
		Discussion	547
35. Mechanisms of Action of Curcumin on Aging: Nutritional and Pharmacological Applications	491	Summary	547
ANA C. CARVALHO, ANDREIA C. GOMES, CRISTINA PEREIRA-WILSON AND CRISTOVAO F. LIMA		Acknowledgments	547
Introduction	492	References	547
Curcumin and Its Traditional Uses	493	39. Zinc: An Essential Trace Element for the Elderly	551
Biochemical and Molecular Targets of Curcumin: An Overview	494	PETER UCIECHOWSKI AND LOTHAR RINK	
Curcumin and Aging	499	Introduction	551
Nutritional and Pharmacological Applications of Curcumin in Aging	502	Zinc Intake, Zinc Deficiency, and Zinc Status of the Elderly	552
Concluding Remarks	506	Zinc and Immunosenescence	554
Summary	506	Zinc Supplementation in Elderly Subjects	558
Acknowledgments	506	Epigenetic Events, Polymorphism and Genetic Markers: Relationship to Zinc Deficiency in the Elderly	561
References	506	Conclusions	562
		Summary Points	562
36. One-Carbon Metabolism: An Unsung Hero for Healthy Aging	513	References	562
EUNKYUNG SUH, SANG-WOON CHOI AND SIMONETTA FRISO		40. Testing the Ability of Selenium and Vitamin E to Prevent Prostate Cancer in a Large Randomized Phase III Clinical Trial: The Selenium and Vitamin E Cancer Prevention Trial	567
Introduction	513	BARBARA K. DUNN, ELLEN RICHMOND, DARRELL E. ANDERSON AND PETER GREENWALD	
One-Carbon Metabolism	514	Introduction	568
Aging, Age-Associated Disease, and One-Carbon Metabolism	515	Rationale for Select	571
Inflammation and One-Carbon Metabolism	517	SELECT	573
Interactions Between One-Carbon Metabolism Genes and Nutrients in Aging	518	Implications and Future Directions	580
Conclusion and Future Perspectives	520	Summary	581
Abbreviations	520	References	581
Summary	520		
References	521		

41. Iodine Intake and Healthy Aging	583	Final Conclusions	631
LEYDA CALLEJAS, SHWETHA MALLESARA AND PHILIP R. ORLANDER		Summary	632
		References	632
Introduction	583		
Sources of Iodine	584		
Iodine and Its Role in the Human Body	585	45. Vitamin E, Inflammatory/Immune Response, and the Elderly	637
Epidemiology	587	EUGENIO MOCCHEGIANI AND MARCO MALAVOLTA	
Iodine and the Human Lifespan	592	Introduction	638
Summary	596	Biology and Intake of Vitamin E	638
