Preface to the Third Edition	xi	3.2. Symmetry	35
		3.3. Resonance	41
		References for Further Reading	45
		Problems	45
1. Where It All Comes From	1	4. Ionic Bonding, Crystals, and Intermolecular Forces	47
1.1. The Structure of the Earth	1	4.1. Ionic Bonds	47
1.2. Composition of the Earth's Crust	2	4.1.1. Energetics of the Ionic Bond	47
1.3. Rocks and Minerals	3	4.1.2. Radius Ratio Effects	50
1.4. Weathering	3	4.1.3. Crystal Structures	53
1.5. Obtaining Metals	4	4.2. Intermolecular Interactions	56
1.6. Some Metals Today	6	4.2.1. Dipole–Dipole Forces	57
1.7. Nonmetallic Inorganic Minerals	7	4.2.2. Dipole-Induced Dipole Forces	57
References for Further Reading	9	4.2.3. London Dispersion Forces	58
Problems	9	4.2.4. Hydrogen Bonding	58
		4.2.5. Solubility Parameters	62
2. Atomic Structure and Properties	11	References for Further Reading	64
2.1. Atomic Structure	11	Problems	65
2.1.1. Quantum Numbers	11	5. Reactions and Energy Relationships	67
2.1.2. Hydrogen-Like Orbitals	13	5.1. Thermodynamic Considerations	67
2.2. Properties of Atoms	14	5.1.1. The Boltzmann Distribution Law	67
2.2.1. Electron Configurations	15	5.1.2. Reactions and ΔG°	70
2.2.2. Ionization Energy	17	5.1.3. Relationship between ΔG and T	72
2.2.3. Electron Affinity	18	5.1.4. Bond Enthalpies	73
2.2.4. Electronegativity	19	5.2. Combination Reactions	75
References for Further Reading	21	5.3. Decomposition Reactions	77
Problems	21	5.4. Redox Reactions	78
		5.5. Hydrolysis Reactions	79
3. Covalent Bonding and Molecular Structure	23	5.6. Replacement Reactions	79
3.1. Molecular Structure	23	5.7. Metathesis	80
3.1.1. Molecular Orbitals	23	5.8. Neutralization Reactions	82
3.1.2. Orbital Overlap	26	References for Further Reading	83
3.1.3. Polar Molecules	28	Problems	83
3.1.4. Geometry of Molecules Having Single Bonds	29		
3.1.5. Valence Shell Electron Pair Repulsion (VSEPR)	32		
3.1.6. Some Subtle Influences on Bonds	33		
3.1.7. Bond Angles and Inversion	34		

6. Acids, Bases, and Nonaqueous Solvents	87	9.3. Boron Compounds	141
6.1. Acid–Base Chemistry	87	9.3.1. Borides	141
6.1.1. Factors Affecting Acid Strength	89	9.3.2. Boron Halides	141
6.1.2. Factors Affecting Base Strength	91	9.3.3. Boron Hydrides	142
6.1.3. Acids and Bases from Oxides	91	9.3.4. Boron Nitrides	144
6.1.4. Molten Salt Protonic Acids	92	9.3.5. Polyhedral Boranes	146
6.1.5. Lewis Theory	93	References for Further Reading	149
6.1.6. HSAB Principle	95	Problems	150
6.1.7. Applications of the Hard–Soft Interaction Principle	97	10. Aluminum, Gallium, Indium, and Thallium	151
6.2. Nonaqueous Solvents	99	10.1. The Elements	151
6.2.1. The Solvent Concept	99	10.2. Oxides	153
6.2.2. The Coordination Model	101	10.3. Hydrides	155
6.2.3. Liquid Ammonia	102	10.4. Halides	156
6.2.4. Reactions in Liquid Ammonia	102	10.5. Other Compounds	157
6.2.5. Liquid HF	105	10.6. Organometallic Compounds	158
6.2.6. Liquid Sulfur Dioxide	106	References for Further Reading	161
6.3. Supercacids	107	Problems	161
References for Further Reading	108	11. Carbon	163
Problems	108	11.1. The Element	163
7. Hydrogen	111	11.1.1. Graphite	163
7.1. Elemental and Positive Hydrogen	111	11.1.2. Graphene	164
7.2. Occurrence and Properties	114	11.1.3. Diamond	165
7.3. Hydrides	115	11.1.4. Fullerenes	165
7.3.1. Ionic Hydrides	115	11.2. Industrial Uses of Carbon	166
7.3.2. Interstitial Hydrides	117	11.2.1. Advanced Composites	166
7.3.3. Covalent Hydrides	117	11.2.2. Manufactured Carbon	167
References for Further Reading	120	11.2.3. Chemical Uses of Carbon	167
Problems	120	11.3. Carbon Compounds	168
8. The Group IA and IIA Metals	123	11.3.1. Ionic Carbides	168
8.1. General Characteristics	123	11.3.2. Covalent Carbides	169
8.2. Oxides and Hydroxides	127	11.3.3. Interstitial Carbides	169
8.3. Halides	129	11.3.4. Oxides of Carbon	169
8.4. Sulfides	130	11.3.5. Carbon Halides	173
8.5. Nitrides and Phosphides	130	11.3.6. Carbon Nitrides	173
8.6. Carbides, Cyanides, Cyanamides, and Amides	131	11.3.7. Carbon Sulfides	174
8.7. Carbonates, Nitrates, Sulfates, and Phosphates	132	References for Further Reading	175
8.8. Organic Derivatives	132	Problems	175
8.9. Zintl Compounds	134	12. Silicon, Germanium, Tin, and Lead	177
References for Further Reading	135	12.1. The Elements	177
Problems	136	12.2. Hydrides of the Group IVA Elements	179
9. Boron	139	12.3. Oxides of the Group IVA Elements	180
9.1. Elemental Boron	139	12.3.1. The +2 Oxides	180
9.2. Bonding in Boron Compounds	140	12.3.2. The +4 Oxides	181
		12.3.3. Glass	182
		12.4. Silicates	184
		12.5. Zeolites	187

12.6.	Halides of the Group IV Elements	189	14.6.	Halides	220
12.6.1.	The +2 Halides	190	14.6.1.	Halides of the Type E_2X_4	220
12.6.2.	The +4 Halides	191	14.6.2.	Trihalides	220
12.7.	Organic Compounds	191	14.6.3.	Pentahalides and Oxyhalides	222
12.8.	Miscellaneous Compounds	193	14.7.	Phosphazine (Phosphonitrilic) Compounds	225
	References for Further Reading Problems	195 195	14.8.	Acids and Their Salts	226
13.	Nitrogen	197	14.8.1.	Phosphorous Acid and Phosphites	227
13.1.	Elemental Nitrogen	197	14.8.2.	Phosphoric Acids and Phosphates	228
13.2.	Nitrides	198	14.9.	Phosphorus in the Environment	231
13.3.	Ammonia and Aquo Compounds	198	14.9.1.	Phosphorus in Soaps and Detergents	231
13.4.	Hydrogen Compounds	199	14.9.2.	Fertilizer Production	231
13.4.1.	Ammonia	199		References for Further Reading Problems	233 233
13.4.2.	Hydrazine, N_2H_4	201	15.	Oxygen	235
13.4.3.	Diimine, N_2H_2	202	15.1.	Elemental Oxygen, O_2	235
13.4.4.	Hydrogen Azide, HN_3	202	15.2.	Ozone, O_3	236
13.5.	Nitrogen Halides	203	15.3.	Preparation of Oxygen	237
13.5.1.	NX_3 Compounds	203	15.4.	Binary Compounds of Oxygen	238
13.5.2.	Difluorodiazine, N_2F_2	204	15.4.1.	Ionic (Metallic) Oxides	238
13.5.3.	Oxyhalides	204	15.4.2.	Covalent Oxides	239
13.6.	Nitrogen Oxides	205	15.4.3.	Amphoteric Oxides	240
13.6.1.	Nitrous Oxide, N_2O	205	15.4.4.	Peroxides and Superoxides	241
13.6.2.	Nitric Oxide, NO	206	15.5.	Positive Oxygen	242
13.6.3.	Dinitrogen Trioxide, N_2O_3	207		References for Further Reading Problems	243 243
13.6.4.	Nitrogen Dioxide, NO_2 and N_2O_4	207	16.	Sulfur, Selenium, and Tellurium	245
13.6.5.	Dinitrogen Pentoxide, N_2O_5	208	16.1.	Occurrence of Sulfur	245
13.7.	Oxyacids	209	16.2.	Occurrence of Selenium and Tellurium	246
13.7.1.	Hyponitrous Acid, $H_2N_2O_2$	209	16.3.	Elemental Sulfur	247
13.7.2.	Nitrous Acid, HNO_2	209	16.4.	Elemental Selenium and Tellurium	248
13.7.3.	Nitric Acid, HNO_3	210	16.5.	Reactions of Elemental Selenium and Tellurium	249
13.8.	Nitrogen in the Environment	212	16.6.	Hydrogen Compounds	250
13.8.1.	Nitrogen Fixation	212	16.7.	Oxides of Sulfur, Selenium, and Tellurium	251
13.8.2.	Nitrification	212	16.7.1.	Dioxides	251
13.8.3.	Denitrification	212	16.7.2.	Trioxides	252
13.8.4.	Human Influences in the Nitrogen Cycle	212	16.8.	Halogen Compounds	253
	References for Further Reading Problems	213 213	16.9.	Nitrogen Compounds	256
14.	Phosphorus, Arsenic, Antimony, and Bismuth	215	16.10.	Oxyhalides of Sulfur and Selenium	257
14.1.	Occurrence	215	16.10.1.	Oxidation State +4	258
14.2.	Preparation and Properties of the Elements	215	16.10.2.	Oxidation State +6	259
14.3.	Hydrides	216			
14.4.	Oxides	217			
14.4.1.	The +3 Oxides	218			
14.4.2.	The +5 Oxides	218			
14.5.	Sulfides	219			

16.11. Oxyacids of Sulfur, Selenium, and Tellurium	260	18. The Noble Gases	287
16.11.1. Sulfurous Acid and Sulfites	261	18.1. The Elements	287
16.11.2. Dithionous Acid and Dithionites	261	18.2. The Xenon Fluorides	289
16.11.3. Dithionic Acid and Dithionates	262	18.3. Reactions of Xenon Fluorides	290
16.11.4. Peroxydisulfuric Acid and Peroxydisulfates	263	18.4. Oxyfluorides and Oxides	292
16.11.5. Oxyacids of Selenium and Tellurium	263	References for Further Reading	294
16.12. Sulfuric Acid	264	Problems	294
16.12.1. Preparation of Sulfuric Acid	264	19. The Transition Metals	297
16.12.2. Physical Properties of Sulfuric Acid	264	19.1. The Metals	297
16.12.3. Chemical Properties of Sulfuric Acid	265	19.1.1. Structures of Metals	297
16.12.4. Uses of Sulfuric Acid	266	19.1.2. Alloys	303
References for Further Reading	267	19.2. Oxides	305
Problems	267	19.3. Sulfides	309
17. Halogens	269	19.4. Halides and Oxyhalides	309
17.1. Occurrence	269	19.5. Miscellaneous Compounds	311
17.2. The Elements	269	19.6. The Lanthanides	312
17.3. Interhalogens	271	References for Further Reading	314
17.3.1. Type XX'	271	Problems	314
17.3.2. Type XX'_3	272	20. Structure and Bonding in Coordination Compounds	317
17.3.3. Type XX'_5	273	20.1. Types of Ligands and Complexes	317
17.3.4. Type XX'_7	273	20.2. Naming Coordination Compounds	319
17.3.5. Structures	273	20.3. Isomerism	321
17.3.6. Chemical Properties	274	20.3.1. Geometrical Isomerism	321
17.4. Polyatomic Cations and Anions	275	20.3.2. Optical Isomerism	323
17.4.1. Polyatomic Halogen Cations	275	20.3.3. Linkage Isomerism	323
17.4.2. Interhalogen Cations	275	20.3.4. Ionization Isomerism	324
17.4.3. Polyatomic Halogen Anions	276	20.3.5. Coordination Isomerism	324
17.5. Hydrogen Halides	277	20.3.6. Polymerization Isomerism	325
17.5.1. Physical Properties	277	20.3.7. Hydrate Isomerism	325
17.5.2. Preparation	278	20.4. Factors Affecting the Stability of Complexes	325
17.6. Oxides	278	20.4.1. The Nature of the Acid–Base Interaction	325
17.6.1. Oxygen Fluorides	279	20.4.2. The Chelate Effect	326
17.6.2. Chlorine Oxides	279	20.4.3. Ring Size and Structure	327
17.6.3. Bromine Oxides	280	20.5. A Valence Bond Approach to Bonding in Complexes	329
17.6.4. Iodine Oxides	281	20.6. Back Donation	333
17.6.5. Oxyfluorides of the Heavier Halogens	281	20.7. Ligand Field Theory	335
17.7. Oxyacids and Oxyanions	282	20.7.1. Octahedral Fields	335
17.7.1. Hypohalous Acids and Hypohalites	282	20.7.2. Tetrahedral, Tetragonal, and Square Planar Fields	336
17.7.2. Halous Acids and Halites	282	20.7.3. Factors Affecting Δ	338
17.7.3. Halic Acids and Halates	283	20.7.4. Ligand Field Stabilization Energy	339
17.7.4. Perhalic Acids and Perhalates	283	20.8. Jahn–Teller Distortion	341
References for Further Reading	284	20.9. Complexes Having Metal–Metal Bonds	342
Problems	285	References for Further Reading	344
		Problems	344

21. Synthesis and Reactions of Coordination Compounds	347	22.5.4. Reactions of Metal Carbonyls	384
21.1. Synthesis of Coordination Compounds	347	22.6. Metal–Olefin Complexes	387
21.1.1. Reaction of a Metal Salt with a Ligand	347	22.6.1. Structure and Bonding	387
21.1.2. Ligand Replacement Reactions	348	22.6.2. Preparation of Metal–Olefin Complexes	389
21.1.3. Reaction of Two Metal Compounds	348	22.7. Complexes of Benzene and Related Aromatics	390
21.1.4. Oxidation–Reduction Reactions	349	References for Further Reading	391
21.1.5. Partial Decomposition	349	Problems	391
21.1.6. Size and Solubility Relationships	349	23. Inorganic Substances in Biochemical Applications	395
21.1.7. Reactions of Metal Salts with Amine Salts	350	23.1. Therapeutic Aspects of Inorganic Substances	395
21.2. A Survey of Reaction Types	350	23.1.1. Metal Compounds in Treatment of Poison Ivy	395
21.2.1. Ligand Substitution	351	23.1.2. Iron Deficiency in Trees	397
21.2.2. Oxidative Addition (Oxad) Reactions	351	23.1.3. Fluorides	397
21.2.3. Insertion Reactions	353	23.1.4. Titanium Dioxide	397
21.2.4. Group Transfer Reactions	353	23.1.5. Zinc Oxide	398
21.2.5. Electron Transfer Reactions	354	23.1.6. Hydroxyurea	398
21.3. A Closer Look at Substitution Reactions	356	23.1.7. Arsenic Compounds	398
21.4. Substitution in Square Planar Complexes	358	23.1.8. Cisplatin and Other Platinum Complexes	399
21.4.1. Mechanisms	358	23.1.9. Auranofin	399
21.4.2. The <i>Trans</i> Effect	360	23.1.10. Anticancer Compounds Containing First-Row Metals	400
21.4.3. Causes of the <i>Trans</i> Effect	362	23.1.11. Ruthenium Compounds in Cancer Treatment	401
21.5. Substitution in Octahedral Complexes	364	23.1.12. Metal Compounds in Treatment of Malaria	401
21.5.1. Classification Based on Rates	364	23.2. Biochemical Aspects of Energy Changes	401
21.5.2. The Effect of LFSE on Rate of Substitution	364	23.2.1. Production of Energy by ATP	402
21.5.3. The S_N1CB Mechanism	366	23.2.2. Photosynthesis	403
References for Further Reading	368	23.3. Oxygen Transport	404
Problems	368	23.3.1. Hemoglobin	404
22. Organometallic Compounds	371	23.3.2. Metal Ions in Superoxide Dismutase	406
22.1. Structure and Bonding in Metal Alkyls	371	23.3.3. Zinc in Carbonic Anhydrase	406
22.2. Preparation of Organometallic Compounds	374	References for Further Reading	408
22.3. Reactions of Metal Alkyls	376	Problems	408
22.4. Cyclopentadienyl Complexes (Metallocenes)	378	Appendix A. Ground State Electron Configurations of Atoms	411
22.5. Metal Carbonyl Complexes	380	Appendix B. Ionization Energies	415
22.5.1. Binary Metal Carbonyls	380	Index	419
22.5.2. Structures of Metal Carbonyls	381		
22.5.3. Preparation of Metal Carbonyls	384
