## PART 1 INTRODUCTION

|                  |                                                                                                    |          |
|------------------|----------------------------------------------------------------------------------------------------|----------|
| <b>CHAPTER 1</b> | <b>Basic Concepts and Definitions .....</b>                                                        | <b>1</b> |
| 1.1              | Introduction .....                                                                                 | 1        |
| 1.1.1            | Basic Concepts .....                                                                               | 2        |
| 1.2              | Units and Dimensions .....                                                                         | 6        |
| 1.2.1            | Fundamental Dimensions and Units .....                                                             | 7        |
| 1.2.2            | Fractions and Multiples .....                                                                      | 8        |
| 1.2.3            | Units of Other Physical Quantities .....                                                           | 8        |
| 1.2.4            | Imperial Units .....                                                                               | 10       |
| 1.3              | Relevant Properties .....                                                                          | 11       |
| 1.3.1            | Forms of Matter .....                                                                              | 11       |
| 1.3.2            | Fluids .....                                                                                       | 11       |
| 1.3.3            | Pressure .....                                                                                     | 12       |
| 1.3.4            | Temperature .....                                                                                  | 15       |
| 1.3.5            | Density .....                                                                                      | 15       |
| 1.3.6            | Viscosity .....                                                                                    | 16       |
| 1.3.7            | Speed of Sound and Bulk Elasticity .....                                                           | 17       |
| 1.3.8            | Thermodynamic Properties .....                                                                     | 18       |
| 1.4              | Aeronautical Definitions .....                                                                     | 24       |
| 1.4.1            | Airfoil Geometry .....                                                                             | 24       |
| 1.4.2            | Wing Geometry .....                                                                                | 26       |
| 1.5              | Dimensional Analysis .....                                                                         | 28       |
| 1.5.1            | Fundamental Principles .....                                                                       | 28       |
| 1.5.2            | Dimensional Analysis Applied to Aerodynamic Force ..                                               | 31       |
| 1.6              | Basic Aerodynamics .....                                                                           | 36       |
| 1.6.1            | Aerodynamic Force and Moment .....                                                                 | 36       |
| 1.6.2            | Force and Moment Coefficients .....                                                                | 39       |
| 1.6.3            | Pressure Distribution on an Airfoil .....                                                          | 40       |
| 1.6.4            | Pitching Moment .....                                                                              | 41       |
| 1.6.5            | Types of Drag .....                                                                                | 46       |
| 1.6.6            | Estimation of Lift, Drag, and Pitching Moment<br>Coefficients from the Pressure Distribution ..... | 50       |
| 1.6.7            | Induced Drag .....                                                                                 | 54       |
| 1.6.8            | Lift-Dependent Drag .....                                                                          | 56       |
| 1.6.9            | Airfoil Characteristics .....                                                                      | 56       |
| 1.7              | Basic Flight Stability .....                                                                       | 63       |

|             |                                                    |    |
|-------------|----------------------------------------------------|----|
| <b>1.8</b>  | Control-Volume Analysis .....                      | 66 |
| 1.8.1       | Froude's Momentum Theory of Propulsion .....       | 66 |
| 1.8.2       | Momentum Theory Applied to the Helicopter Rotor... | 70 |
| <b>1.9</b>  | Hydrostatics .....                                 | 73 |
| <b>1.10</b> | Exercises .....                                    | 78 |

## PART 2 FUNDAMENTALS OF FLUID MECHANICS

|                  |                                                                 |           |
|------------------|-----------------------------------------------------------------|-----------|
| <b>CHAPTER 2</b> | <b>Equations of Motion .....</b>                                | <b>87</b> |
| <b>2.1</b>       | Introduction .....                                              | 87        |
| 2.1.1            | Selection of Reference Frame .....                              | 88        |
| 2.1.2            | A Comparison of Steady and Unsteady Flow .....                  | 89        |
| <b>2.2</b>       | One-Dimensional Flow: The Basic Equations .....                 | 91        |
| 2.2.1            | One-Dimensional Flow: The Basic Equations of Conservation ..... | 91        |
| 2.2.2            | Comments on the Momentum and Energy Equations ..                | 98        |
| <b>2.3</b>       | Viscous Boundary Layers .....                                   | 98        |
| <b>2.4</b>       | Measurement of Air Speed .....                                  | 100       |
| 2.4.1            | Pitôt-Static Tube .....                                         | 100       |
| 2.4.2            | Pressure Coefficient .....                                      | 102       |
| 2.4.3            | Air-Speed Indicator: Indicated and Equivalent Air Speeds .....  | 102       |
| 2.4.4            | Incompressibility Assumption .....                              | 104       |
| <b>2.5</b>       | Two-Dimensional Flow .....                                      | 106       |
| 2.5.1            | Component Velocities .....                                      | 107       |
| 2.5.2            | Equation of Continuity or Conservation of Mass .....            | 110       |
| 2.5.3            | Equation of Continuity in Polar Coordinates .....               | 112       |
| <b>2.6</b>       | Stream Function and Streamline .....                            | 113       |
| 2.6.1            | Stream Function $\psi$ .....                                    | 113       |
| 2.6.2            | Streamline .....                                                | 115       |
| 2.6.3            | Velocity Components in Terms of $\psi$ .....                    | 116       |
| <b>2.7</b>       | Momentum Equation .....                                         | 119       |
| 2.7.1            | Euler Equations .....                                           | 124       |
| <b>2.8</b>       | Rates of Strain, Rotational Flow, and Vorticity .....           | 124       |
| 2.8.1            | Distortion of Fluid Element in Flow Field .....                 | 125       |
| 2.8.2            | Rate of Shear Strain .....                                      | 126       |
| 2.8.3            | Rate of Direct Strain .....                                     | 127       |
| 2.8.4            | Vorticity .....                                                 | 127       |
| 2.8.5            | Vorticity in Polar Coordinates .....                            | 128       |
| 2.8.6            | Rotational and Irrotational Flow .....                          | 128       |
| 2.8.7            | Circulation .....                                               | 128       |
| <b>2.9</b>       | Navier-Stokes Equations .....                                   | 131       |
| 2.9.1            | Relationship between Rates of Strain and Viscous Stresses ..... | 132       |

|                  |                                                                                                              |            |
|------------------|--------------------------------------------------------------------------------------------------------------|------------|
| 2.9.2            | Derivation of the Navier-Stokes Equations . . . . .                                                          | 133        |
| <b>2.10</b>      | Properties of the Navier-Stokes Equations . . . . .                                                          | 134        |
| <b>2.11</b>      | Exact Solutions of the Navier-Stokes Equations . . . . .                                                     | 138        |
| 2.11.1           | Couette Flow: Simple Shear Flow . . . . .                                                                    | 138        |
| 2.11.2           | Plane Poiseuille Flow: Pressure-Driven Channel Flow . . . . .                                                | 139        |
| 2.11.3           | Hiemenz Flow: Two-Dimensional Stagnation-Point<br>Flow . . . . .                                             | 140        |
| <b>2.12</b>      | Exercises . . . . .                                                                                          | 145        |
| <b>CHAPTER 3</b> | <b>Viscous Flow and Boundary Layers . . . . .</b>                                                            | <b>151</b> |
| <b>3.1</b>       | Introduction . . . . .                                                                                       | 151        |
| <b>3.2</b>       | Boundary-Layer Theory . . . . .                                                                              | 157        |
| 3.2.1            | Blasius's Solution . . . . .                                                                                 | 157        |
| 3.2.2            | Definitions of Boundary-Layer Thickness . . . . .                                                            | 159        |
| 3.2.3            | Skin-Friction Drag . . . . .                                                                                 | 163        |
| 3.2.4            | Laminar Boundary-Layer Thickness along a Flat Plate . . . . .                                                | 166        |
| 3.2.5            | Solving the General Case . . . . .                                                                           | 168        |
