<b>Preface to the Second Edition</b>	<b>ix</b>
<b>Preface to the First Edition</b>	<b>xi</b>
<b>Acronyms, Abbreviations, and Symbols</b>	<b>xv</b>

## 1. Introduction

1.1 Biological Cycle	1
1.2 Green Chemistry	3
1.3 Sustainability	5
1.4 Biorefinery	5
1.5 Biotechnology and Bioprocess Engineering	9
1.6 Mathematics, Biology, and Engineering	11
1.7 The Story of Penicillin: The Dawn of Bioprocess Engineering	12
1.8 Bioprocesses: Regulatory Constraints	15
1.9 The Pillars of Bioprocess Kinetics and Systems Engineering	17
1.10 Summary	18
Bibliography	19
Problems	20

## 2. An Overview of Biological Basics

2.1 Cells and Organisms	21
2.2 Stem Cell	38
2.3 Cell Chemistry	40
2.4 Cell Feed	71
2.5 Summary	77
Bibliography	78
Problems	79

## 3. An Overview of Chemical Reaction Analysis

3.1 Chemical Species	81
3.2 Chemical Reactions	83
3.3 Reaction Rates	86
3.4 Approximate Reactions	91
3.5 Rate Coefficients	92

3.6 Stoichiometry	95
3.7 Yield and Yield Factor	98
3.8 Reaction Rates Near Equilibrium	100
3.9 Energy Regularity	106
3.10 Classification of Multiple Reactions and Selectivity	108
3.11 Coupled Reactions	109
3.12 Reactor Mass Balances	113
3.13 Reaction Energy Balances	115
3.14 Reactor Momentum Balance	122
3.15 Ideal Reactors	124
3.16 Bioprocess Systems Optimization	126
3.17 Summary	128
Bibliography	133
Problems	133

## 4. Batch Reactor

4.1 Isothermal Batch Reactors	140
4.2 Batch Reactor Sizing	153
4.3 Nonisothermal Batch Reactors	157
4.4 Numerical Solutions of Batch Reactor Problems	163
4.5 Graphical Solutions of Batch Reactor Sizing From Concentration Profiles	169
4.6 Summary	172
Bibliography	173
Problems	174

## Ideal Flow Reactors

5.1 Flow Rate, Residence Time, Space Time, Space Velocity, and Dilution Rate	180
5.2 Plug Flow Reactor	182
5.3 Gasification and Fischer-Tropsch Technology	191
5.4 Continuous Stirred Tank Reactor and Chemostat	195
5.5 Multiple Reactors	207
5.6 Recycle Reactors	212

- 5.7 Distributed Feed and Withdraw 216
- 5.8 PFR or CSTR? 227
- 5.9 Steady Nonisothermal Flow Reactors 231
- 5.10 Reactive Extraction 238
- 5.11 Graphic Solutions Using Batch Concentration Data 240
- 5.12 Summary 243
- Bibliography 245
- Problems 245

## 6. Kinetic Theory and Reaction Kinetics

- 6.1 Elementary Kinetic Theory 260
- 6.2 Collision Theory of Reaction Rates 266
- 6.3 Reaction Rate Analysis/Approximation 269
- 6.4 Unimolecular Reactions 272
- 6.5 Free Radicals 273
- 6.6 Kinetics of Acid Hydrolysis 275
- 6.7 Parametric Estimation 278
- 6.8 Summary 287
- Bibliography 287
- Problems 288

## 7. Enzymes

- 7.1 How Enzymes Work 302
- 7.2 Simple Enzyme Kinetics 308
- 7.3 Multiple-Substrate and Competitive Enzyme Kinetics 314
- 7.4 pH Effects 329
- 7.5 Temperature Effects 333
- 7.6 Insoluble Substrates 334
- 7.7 Immobilized Enzyme Systems 335
- 7.8 Analysis of Bioprocess With Enzymatic Reactions 340
- 7.9 Large-Scale Production of Enzymes 347
- 7.10 Medical and Industrial Utilization of Enzymes 348
- 7.11 Kinetic Approximation: Why Michaelis-Menten Equation Works 351
- 7.12 Summary 363
- Bibliography 364
- Problems 365

## 8. Chemical Reactions on Solid Surfaces

- 8.1 Catalysis 376
- 8.2 How Does Reaction With Solid Occur? 379
- 8.3 Adsorption and Desorption 382

- 8.4 LHHW: Surface Reactions With Rate-Controlling Steps 414
- 8.5 Chemical Reactions on Nonideal Surfaces Based on the Distribution of Interaction Energy 431
- 8.6 Chemical Reactions on Nonideal Surfaces With the Multilayer Approximation 436
- 8.7 Kinetics of Reactions on Surfaces Where the Solid Is Either a Product or Reactant 437
- 8.8 Decline of Surface Activity: Catalyst Deactivation 439
- 8.9 Summary 440
- Bibliography 444
- Problems 445

## Cell Metabolism

- 9.1 The Central Dogma 452
- 9.2 DNA Replication: Preserving and Propagating the Cellular Message 455
- 9.3 Transcription: Sending the Message 457
- 9.4 Translation: Message to Product 464
- 9.5 Metabolic Regulation 471
- 9.6 How a Cell Senses Its Extracellular Environment 488
- 9.7 Major Metabolic Pathways 494
- 9.8 Overview of Biosynthesis 514
- 9.9 Overview of Anaerobic Metabolism 515
- 9.10 Interrelationships of Metabolic Pathways 518
- 9.11 Overview of Autotrophic Metabolism 520
- 9.12 The Monod Equation: FES Approximation Through Metabolic Pathways 522
- 9.13 Summary 526
- Bibliography 528
- Problems 529

## Interactive Enzyme and Molecular Regulation

- 10.1 Protein Oligomerization and Interactive Enzyme 538
- 10.2 Ligand Binding and Cooperativity 565
- 10.3 Competitive Multiligand Binding on an Interactive Enzyme 581
- 10.4 Catalytic Reaction Rate on Interactive Enzymes 598
- 10.5 Kinetics of Polymorphic Catalysis and Allosteric Modulation 604
- 10.6 Influence of a Competitive Effector on Interactive Enzymes 615

10.7 Summary 618  
 Bibliography 623  
 Problems 624

### How Cells Grow

11.1 Quantifying Biomass 630  
 11.2 Batch Growth Patterns 633  
 11.3 Biomass Yield 638  
 11.4 Approximate Growth Kinetics and Monod Equation 643  
 11.5 Cell Death Rate 647  
 11.6 Cell Maintenance and Endogenous Metabolism 649  
 11.7 Product Yield 656  
 11.8 Oxygen Demand for Aerobic Microorganisms 657  
 11.9 Effect of Temperature 661  
 11.10 Effect of pH 662  
 11.11 Effect of Redox Potential 663  
 11.12 Effect of Electrolytes and Substrate Concentration 664  
 11.13 Heat Generation by Microbial Growth 664  
 11.14 Overview of Microbial Growth Kinetic Models 666  
 11.15 Summary 689  
 Bibliography 691  
 Problems 692

### Cell Cultivation

12.1 Batch Culture 700  
 12.2 Continuous Culture 705  
 12.3 Choosing the Cultivation Method 717  
 12.4 Waste Water Treatment Process 732  
 12.5 Immobilized Cell Systems 738  
 12.6 Solid Substrate Fermentations 744  
 12.7 Fedbatch Operations 747  
 12.8 Summary 766  
 Bibliography 768  
 Problems 769

## 13. Evolution and Genetic Engineering

13.1 Mutations 784  
 13.2 Selection 791  
 13.3 Natural Mechanisms for Gene Transfer and Rearrangement 794  
 13.4 Techniques of Genetic Engineering 798  
 13.5 Applications of Genetic Engineering 806

13.6 The Product and Process Decisions 808  
 13.7 Host-Vector System Selection 810  
 13.8 Regulatory Constraints on Genetic Processes 820  
 13.9 Metabolic Engineering 823  
 13.10 Protein Engineering 825  
 13.11 Summary 826  
 Bibliography 827  
 Problems 827

## 14. Sustainability: Humanity Perspective

14.1 What is Sustainability? 830  
 14.2 Sustainability of Humanity 831  
 14.3 Water 834  
 14.4 CO<sub>2</sub> and Biomass 846  
 14.5 Woody Biomass Use and Desired Sustainable State 852  
 14.6 Solar Energy 860  
 14.7 Geothermal Energy 863  
 14.8 Summary 864  
 Bibliography 867  
 Problems 867

## 15. Sustainability and Stability

15.1 Feed Stability of a CSTR 873  
 15.2 Thermal Stability of a CSTR 892  
 15.3 Approaching Steady State 900  
 15.4 Catalyst Instability 905  
 15.5 Genetic Instability 907  
 15.6 Mixed Cultures 922  
 15.7 Summary 938  
 Bibliography 939  
 Problems 939

## 16. Mass Transfer Effects: Immobilized and Heterogeneous Reaction Systems

16.1 How Does Transformation Occur in a Heterogeneous System? 950  
 16.2 Molecular Diffusion and Mass Transfer Rate 952  
 16.3 External Mass Transfer 955  
 16.4 Reactions in Isothermal Porous Catalysts 963  
 16.5 Mass Transfer Effects in Nonisothermal Porous Particles 979  
 16.6 External and Internal Mass Transfer Effects 985

16.7 Encapsulation Immobilization	988
16.8 External and Internal Surface Effects	990
16.9 The Shrinking Core Model	991
16.10 Summary	995
Bibliography	998
Problems	999
 Bioreactor Design Operation  	
17.1 Bioreactor Selection	1008
17.2 Reactor Operational Mode Selection	1014
17.3 Aeration, Agitation, and Heat Transfer	1016
17.4 Scale-Up	1020
17.5 Scale-Down	1022
17.6 Bioinstrumentation and Controls	1023
17.7 Sterilization of Process Fluids	1025
17.8 Aseptic Operations and Practical Considerations for Bioreactor System Construction	1038
17.9 Effect of Imperfect Mixing	1042
17.10 Summary	1050
Bibliography	1054
Problems	1055

 Combustion, Reactive Hazard, and Bioprocess Safety  	
18.1 Biological Hazards	1060
18.2 Identifying Chemical Reactivity Hazards	1066
18.3 Heat, Flames, Fires, and Explosions	1081
18.4 Probabilities, Redundancy, and Worst-Case Scenarios	1083
18.5 Chain Reactions	1084
18.6 Autooxidation and Safety	1086
18.7 Combustion	1090
18.8 Premixed Flames	1098
18.9 Heat Generation	1101
18.10 Combustion of Liquids and Solids	1102
18.11 Solid and Liquid Explosives	1112
18.12 Explosions and Detonations	1114
18.13 Reactor Safety	1115
18.14 Summary	1122
Bibliography	1124
Problems	1125
