Preface.....	xi
--------------	----

SECTION 1 INNOVATIVE CONSTRUCTION METHODS

CHAPTER 1 Introduction to Modern Accelerated Bridge Construction	3
1.1 Rapid construction and early delivery of bridges	3
1.2 A review of the many aspects of ABC philosophy and benefits to society	12
1.3 Scope of ABC work	15
1.4 Multiple factors that may affect ABC progress and benefits	22
1.5 ABC planning for new and replacement bridges	25
1.6 Urgency in fixing defective bridges	32
1.7 Impact of ABC on long-term life-cycle costs	44
1.8 Recent advancements in ABC methods, literature, and design codes	45
1.9 Using advanced management techniques in ABC	47
1.10 Conclusions for developing and promoting ABC	49
CHAPTER 2 Recent Developments in ABC Concepts	53
2.1 Application of ABC concepts	53
2.2 A practical approach to solving ABC issues	55
2.3 Variations in ABC methods	58
2.4 Advantages of ABC drawings and contract documents	61
2.5 Accelerated management	62
2.6 Accelerated bridge rehabilitation	64
2.7 Asset management after identifying SD bridges	66
2.8 Inspection programs	75
2.9 Bridges on waterways	78
2.10 Funding allocations for Structurally deficient bridges	80
2.11 Grand challenges by the AASHTO technical committee for construction (T-4)	93
2.12 Design-build contracts and role played by the Design-Build Institute of America	95
2.13 Types of contracts	97
2.14 The Construction Management General Contractor Institute	100
2.15 The Construction Industry Institute	100
2.16 Conclusions for ABC and design build contracts	101
CHAPTER 3 Research and Training in ABC Structural Systems	103
3.1 Background	103
3.2 Variations in structural systems and scope of work	104
3.3 SHM and prioritization of bridges for rehabilitation and replacement	113
3.4 ABP leads to ABC	117

3.5	Compliance with environmental permit regulations	124
3.6	Insurances against liabilities	124
3.7	Utility coordination prior to and during construction	125
3.8	ABC for railway bridges	126
3.9	Choosing the accelerated construction route in New Jersey	127
3.10	FHWA innovative techniques	129
3.11	Surges in transportation publications and workshops	133
3.12	Continuing education, training and research in ABC	134
3.13	Training in emergency and disaster management	139
3.14	Webinars on ABC at FIU	140
3.15	Seminar on ABC at Philadelphia Structural Engineering Institute of ASCE	147
3.16	Design-Build Institute of America's training programs in promoting design-build methods	148
3.17	The need for a national center devoted to ABC	148
3.18	Research challenges for developing ABC technology	148
3.19	Conclusions on identifying the ways and means to promote ABC Structural Systems	156

CHAPTER 4 Innovative ABC Techniques 159

4.1	Maintaining the right-of-way philosophy with accelerated bridge construction	159
4.2	Ensuring adequate investment returns	170
4.3	Modern concrete technology and accelerated bridge construction	173
4.4	Recent innovations leading to faster bridge delivery	178
4.5	Development of diverse repair technologies	184
4.6	New materials and technology	185
4.7	Modern equipment	187
4.8	Fiber-reinforced polymer concrete	188
4.9	Lightweight concrete	195
4.10	Prefabricated bridge decks and overlays	198
4.11	Use of recycled concrete aggregate	205
4.12	Applications of innovative precast members	207
4.13	Alternatives to concrete materials	208
4.14	Use of other recyclable materials	209
4.15	Conclusions	210

SECTION 2 RECENT DEVELOPMENTS IN ABC CONCEPTS

CHAPTER 5 Modular Bridge Construction Issues 215

5.1	Prefabricated bridge elements and systems	215
5.2	General prefabrication criteria	218
5.3	Promoting prefabrication by FHWA and others	222
5.4	Advancements in prefabrication technology by AASHTO and the prestressed concrete institute	223

5.5	Prefabricated steel girders	230
5.6	Precast components for substructures	237
5.7	Miscellaneous prefabricated bridge elements	239
5.8	Alternative use of hybrid-composite beam	240
5.9	Essential deck overlays for improving riding surface quality	243
5.10	Types of rapid bridge construction	244
5.11	ABC presents challenges and technically sensitive issues	245
5.12	Use of new construction materials	249
5.13	Proprietary manufacturing companies	251
5.14	Further case studies of prefabricated bridges	252
5.15	Conclusions for prefabricated bridges	254
CHAPTER 6	Rapid Bridge Insertions Following Failures	257
6.1	Introduction	257
6.2	Bridge failures can be prevented by asset management methods of ABC	259
6.3	Inspection and rating procedures as a starting point for maintenance	261
6.4	Probability of failure and risk management	264
6.5	Failure studies of conventional bridges	269
6.6	History of failures during construction and case studies	272
6.7	Vulnerability to failure of U.S. bridges	283
6.8	Rapid insertion/emergency replacement methods using ABC	287
6.9	Accelerated bridge replacement (ABR)	292
6.10	Recent progress made with successful completion of ABC	295
6.11	Curved girders instability in unbraced erection conditions	299
6.12	Costs of bridge failures and funding allocations	305
6.13	Conclusions	306
CHAPTER 7	ABC Planning and Resolving ABC Issues	309
7.1	Our failing infrastructure and transportation problems	309
7.2	Planning bridges on new routes and replacements on existing routes	316
7.3	Role of government agencies in maintaining infrastructure	321
7.4	Engineers meeting the need to replace or rehabilitate bridges	324
7.5	Progress in design build, prefabrication, and the role of the construction manager/ general contractor	332
7.6	MPT during construction	335
7.7	Action required by environmental engineer	336
7.8	Improved aesthetics	337
7.9	Design-related issues	338
7.10	States across the country implementing ABC	341
7.11	Overview of maintenance procedures	344
7.12	Increasing the service life of bridges	344

7.13 Practical examples of Pennsylvania and New Jersey bridges	347
7.14 Conclusions	349

SECTION 3 MODULAR BRIDGES

CHAPTER 8 Prefabrication of the Superstructure	353
8.1 Introduction	353
8.2 Continuous reconstruction of nationwide bridges	356
8.3 Developments in ABC technology	359
8.4 The stakeholders in promoting rapid construction	359
8.5 Environmental impact, guidelines, historic sites, and transportation	361
8.6 Case studies of a variety of bridges using PBES in the United States	363
8.7 Notable progress in the United States	364
8.8 Selecting and optimizing the girder shape	365
8.9 Selected examples of successful application of precast construction	390
8.10 Use of lightweight concrete for girders (a win-win situation)	391
8.11 Deck overlay options	393
8.12 Use of ABC outside USA	393
8.13 Publications	395
8.14 Conclusions	396
CHAPTER 9 Prefabrication of the Substructure and Construction Issues	399
9.1 Rapid substructure construction a greater challenge than that of rapid superstructure	399
9.2 An overview of rapid substructure construction	401
9.3 Design of precast substructure elements	406
9.4 Substructure construction techniques using SPMT units	406
9.5 Case studies of prefabricated substructures	410
9.6 Additional bridges with precast concrete substructures	411
9.7 FHWA listed bridges with prefabricated substructures	422
9.8 ABC alternative contracting methods	424
9.9 Construction specifications and details for accelerated completion	429
9.10 Precast structure elements guidelines	433
9.11 Important sheet checklist	434
9.12 Toolkit of innovative designs for rapid bridge renewal	436
9.13 Environmental issues with ABC	437
9.14 Conclusions	438
CHAPTER 10 Alternative ABC Methods and Funding Justification	443
10.1 Priority needs and replacement costs	443
10.2 Study of traffic volume, traffic counts, and traffic maps	446
10.3 Structural performance of existing bridges	448

10.4	Review of infrastructure health by FHWA and ASCE	451
10.5	ABC application in asset management	454
10.6	Evaluating the condition of state bridges and funding	461
10.7	Need for timely project funding	462
10.8	Value engineering goals in ABC	468
10.9	Policy making and scope of ABC reconstruction	471
10.10	Innovative techniques and new applications	482
10.11	Conclusions	487
CHAPTER 11	A Review of Chapters, River Bridges, and Conclusions	489
11.1	Introduction to chapter 11 Part 1	489
	Part 2	500
11.2	Coordination with highway maintenance schedule	500
11.3	ABC applications for bridges located on rivers	501
11.4	Planning of bridges over rivers	505
11.5	Issues of scour-critical bridges	507
11.6	Rapid repairs and replacement of bridges on rivers	512
11.7	Procedures for scour-related accelerated rehabilitation	521
11.8	Scour countermeasures for new bridges	528
11.9	Case studies and ABC research	533
11.10	Conclusions	538
11.11	Future deployment of ABC	542
11.12	Literature review/acknowledgements.....	543
	Appendix 1	545
	Index	567
	Appendices 2 to 11 (online).....	e1–e52
