CHAPTER 1	Wireless Infrastructure	1
	Introduction.....	1
1.1	The cellular infrastructure.....	2
1.2	The satellite infrastructure	2
1.3	Challenges.....	3
1.4	This book	5
	Conclusive remarks.....	6
CHAPTER 2	CMOS Transceivers for Modern Cellular Terminals ...	7
	Introduction.....	7
2.1	2G transceiver architecture design.....	7
	2.1.1 GSM/EDGE receiver requirement.....	8
	2.1.2 GSM/EDGE transmitter requirement	13
2.2	3/4G transceiver architecture design.....	20
	2.2.1 3G receiver requirements.....	20
	2.2.2 3G transmitter requirements	25
	2.2.3 LTE transceiver requirements	27
2.3	Handset calibration	29
	2.3.1 Factory calibrations.....	29
	2.3.2 Automatic calibrations	30
	Conclusions.....	31
	References.....	32
CHAPTER 3	Low-Noise Amplifiers for Cellular Wireless Infrastructure	35
	Introduction.....	35
3.1	LNA specifications	36
3.2	pHEMT-GaAs-based LNAs.....	36
	3.2.1 Single-device LNA	37
	3.2.2 Cascode LNA.....	38
	3.2.3 Cascaded LNA	39
	3.2.4 MMIC LNA module	40
3.3	Silicon-based LNAs.....	41
	3.3.1 Single-stage BiCMOS LNA	42
	3.3.2 Cascaded BiCMOS LNA.....	44
	3.3.3 Broadband BiCMOS LNA.....	45

	3.3.4 CMOS LNAs with sub-1 dB NF	47
	Conclusions.....	49
	References.....	50
CHAPTER 4	High-Efficiency Power Amplifiers for Wireless Infrastructure	51
	Introduction.....	51
4.1	Wideband Doherty power amplifier.....	53
	4.1.1 Theory of Doherty power amplifiers.....	53
	4.1.2 Circuit realization	61
	4.1.3 Simulated and measured results.....	62
4.2	High-efficiency wideband outphasing power amplifier	64
	4.2.1 Wideband class-E Chireix combiner.....	65
	4.2.2 Class-E RF outphasing power amplifier design.....	67
	4.2.3 Experimental results	69
4.3	High-power drivers for high-efficiency RF power amplifiers	71
	4.3.1 Driver circuit topology.....	72
	4.3.2 Design and implementation	75
	4.3.3 Measurement results	75
	References.....	79
CHAPTER 5	Digital Fractional-N Frequency Synthesis	83
	Introduction.....	83
5.1	Performance of digital PLLs.....	87
	5.1.1 Noise–power trade-off and spur performance	87
	5.1.2 TDC finite resolution in the ADPLL topology	88
	5.1.3 TDC finite resolution in the $\Delta\Sigma$ -fractional- N topology	89
	5.1.4 Effects of TDC nonlinearity.....	91
5.2	Techniques for TDC nonlinearity mitigation.....	92
	5.2.1 Element randomization.....	92
	5.2.2 Large-scale dithering	95
5.3	Digital-to-time-converter-based digital PLLs.....	97
	5.3.1 Fractional- N digital PLLs with narrow-range TDCs.....	97
	5.3.2 Digital background correction of DTC nonlinearity	100
	5.3.3 Fractional- N digital PLLs with single-bit TDCs.....	103
	5.3.4 Fractional- N divider with unregulated DTC	106
	Conclusions.....	109
	References.....	109

CHAPTER 6	Mixers and Modulators in Wireless Systems	115
	Introduction.....	115
6.1	Basic principles.....	115
6.2	Switching mixers	116
6.3	Specifications.....	117
	6.3.1 Gain.....	117
	6.3.2 Linearity.....	117
	6.3.3 Leakage and feedthrough.....	118
	6.3.4 Noise	120
6.4	Single and double balanced mixers	121
	6.4.1 Practical implementations.....	122
6.5	Passive mixers.....	122
6.6	Passive mixer noise sources.....	123
6.7	25% Duty cycle passive mixer.....	126
6.8	Active mixers	128
6.9	Active mixer noise	131
6.10	Active mixer enhancements	133
6.11	Active quadrature mixers.....	134
6.12	Harmonic rejection mixers.....	135
	Summary remarks.....	138
	References.....	139
CHAPTER 7	Integrated Satellite Low Noise Block Down-Converter	141
	Introduction.....	141
7.1	System.....	142
	7.1.1 Configuration	142
	7.1.2 LNB block diagram	143
	7.1.3 From recommendations toward product specifications	144
7.2	IC technology.....	149
7.3	Downconverter design	149
	7.3.1 Architecture.....	149
	7.3.2 General design considerations	150
	7.3.3 Stability considerations.....	151
	7.3.4 Low-noise amplifier.....	153
	7.3.5 Mixer.....	155
	7.3.6 IF amplifier	155
7.4	LO-PLL design	158
	7.4.1 Architecture.....	158
	7.4.2 Implementation strategy	159
	7.4.3 Noise budget specification.....	160

	7.4.4 LO signal source	161
	7.4.5 Frequency divider	163
	7.4.6 Phase-frequency detector and charge-pump	165
	7.4.7 Charge-pump	166
	7.4.8 Crystal oscillator	167
7.5	Experimental results	169
7.6	LNB reference design	171
	7.6.1 Design	172
	7.6.2 Measurement results	173
	References	175
CHAPTER 8	Bandpass $\Delta\Sigma$ ADCs for Wireless Receivers.....	177
	Introduction.....	177
8.1	A bandpass $\Delta\Sigma$ primer.....	179
	8.1.1 Discrete-time vs. continuous-time $\Delta\Sigma$	181
	8.1.2 Single bit vs. multi bit.....	182
	8.1.3 Loop-filter architecture: feedback vs. feedforward.....	182
	8.1.4 Single-loop vs. multi-stage architectures.....	184
	8.1.5 Jitter and phase noise	185
8.2	Example bandpass $\Delta\Sigma$ ADC.....	186
	8.2.1 Input LNA and attenuator	187
	8.2.2 Loop filter	188
	8.2.3 Amplifier	190
	8.2.4 Flash ADC	193
	8.2.5 Feedback DACs	195
8.3	Experimental results	196
	8.3.1 NTF and STF	197
	8.3.2 Single-tone and two-tone performance.....	200
	8.3.3 DR vs. F_0 and BW	202
	8.3.4 Comparison with other $\Delta\Sigma$ ADCs	202
8.4	Looking forward	204
	References.....	204
CHAPTER 9	High-Performance Pipelined ADCs for Wireless Infrastructure Systems	207
	Introduction.....	207
9.1	Receive path specifications for macro BTS	208
9.2	IF filter and ADC interface	212
9.3	SHA-less front-end design.....	214
9.4	Switch nonlinearity and digital linearization	218
	Summary and future outlook	222
	References.....	222

CHAPTER 10 Interleaving of Successive-Approximation Register ADCs in Deep Sub-Micron CMOS Technology	225
Introduction.....	225
10.1 The amalgam of successive-approximation-based data conversion concepts	226
10.2 Bandwidth and noise considerations	228
10.3 Interleaved SAR architecture overview and tradeoffs	231
10.4 Clocking considerations.....	236
10.5 Interleave mismatches.....	237
10.6 SAR randomization techniques	242
10.7 Spectral sensing with broadband sampling.....	243
Summary.....	245
References.....	246
CHAPTER 11 High-Performance Digital-to-Analog Converters for Wireless Infrastructure	251
Introduction.....	251
11.1 Transmitter architectures	251
11.2 RF DAC design challenges	255
11.2.1 Principle of operation	255
11.2.2 Data capture and pre-processing.....	260
11.3 Package	262
11.4 Practical design considerations.....	262
11.5 Measured results	264
11.6 Future direction.....	266
References.....	268
CHAPTER 12 Time-to-Digital Conversion for Digital Frequency Synthesizers	271
Introduction.....	271
12.1 Background on TDC architectures	274
12.1.1 Vernier technique	274
12.1.2 Interpolation.....	275
12.1.3 Time-based amplification.....	276
12.1.4 Oscillator approach.....	278
12.2 Gated ring oscillator TDC.....	278
12.2.1 Key concepts.....	279
12.2.2 High-performance implementation techniques	282
12.2.3 Measured results	284

x Contents

12.3	Advanced noise shaped TDC architectures	287
12.3.1	Higher-order noise shaping.....	287
12.3.2	Switched ring oscillator (SRO) TDC.....	288
12.3.3	Other approaches	289
12.4	TDC implications for type II PLL topologies.....	290
	Conclusion	291
	Acknowledgments	292
	References.....	292
	Index.....	295
