## **1 Investigating plant variation and evolution** 1

### **2 From Ray to Darwin** 4

Ray and the definition of species 4

The Great Chain of Being 5

Linnaeus 6

Buffon and Lamarck 10

Darwin 11

Tests of specific difference 21

### **3 Early work on biometry** 23

Biometrics and eugenics 23

Biometrical studies of plants 24

Commonest occurring variation in an array 25

Estimates of dispersion of the data 26

Histograms, frequency diagrams and the normal distribution curve 27

Other types of distribution 28

Comparison of different arrays of data 28

Complex distributions 29

Local races 32

Correlated variation 33

Problems of biometry 35

### **4 Early work on the basis of individual variation** 37

Phenotype and genotype 38

Transplant experiments 39

Mendel's experiments 41

Pangenesis 46

Mendelian ratios in plants 47

Mendelism and continuous variation 48

Physical basis of Mendelian inheritance 51

The development of plant cytology 55

Chromosome number 56

Chromosome changes 59

Non-Mendelian inheritance 59

Patterns of variation 60

Phenotypic variation 60

The extent of phenotypic variability in plants 61

Developmental variation 62

Phenotypic plasticity 64

Some early experiments 64

Individual variation in plants 66

### **5 Post-Darwinian ideas about evolution** 67

Experimental investigation of evolution 67

The mutation theory of evolution 70

The Evolutionary Synthesis 71

Elements of the New Synthesis 71

Coda 73

### **6 DNA: towards an understanding of heredity and molecular evolution** 74

DNA: its structure and properties 74

Replication of DNA 75

Transcription and translation of genetic information 76

Mutation of DNA 78

Exchanges of DNA segments 79

Gene silencing: epigenetic modification of DNA 79

The plant cell: adaptive, neutral and junk DNA 81

DNA in the nucleus 82

Centromeres 83

Telomeres 83

B chromosomes 83

The concept of junk DNA revisited 84

DNA in plant cells: mitochondria and chloroplasts	85
Evolutionary changes in the chloroplast structure	86
Genetics of chloroplasts and mitochondria	86
<i>Arabidopsis thaliana</i> : its role as a model species	86
Studying developmental processes: the role of model plants	88
Phylogenetic studies	89
Common origin to life on Earth	89
Advances in comparative genomics	90
Palaeopolyploidy and chromosomal changes	92
Duplicated genes	92
Techniques for studying genetic variation	93
Selecting marker systems to test hypotheses	95
Concluding remarks	96

## 7 Breeding systems 98

A. The different breeding systems found in flowering plants	98
Outbreeding	98
Molecular studies of self-incompatibility systems	102
Homomorphic and heteromorphic incompatibility systems	103
Late-acting self-incompatibility systems	104
Self-fertilisation	105
Apomixis	106
Agamospermy	107
Apomictic phenomena	108
Embryology of apomixis	109
Apomictic behaviour	111
Diplospory	111
Apospory	111
The role of pollen in the evolution of apomictic plants	112
Genetics of apomixis	113
Molecular nature and origin of apomixis	113
Some dogmas about seed apomixis	114
B. Breeding behaviour discovered in studies of wild populations	114
Consequences of different reproductive modes	114
Advantages and disadvantages of different breeding systems	116

Reproductive assurance and the genetic 'quality' of progeny	118
Breeding systems in wild populations	119
Outbreeding combined with vegetative reproduction	119
Outbreeding in association with vivipary	119
Outbreeding combined with occasional self-fertilisation	120
Outbreeding combined with regular self-fertilisation	121
Mixed reproduction: selfing and outcrossing in different proportions	122
Facultative and obligatory apomixis	124
Environmental control of facultative apomixis	125
C. Evolution of breeding systems	126
Some concluding remarks	132

## 8 Intraspecific variation and the ecotype concept 135

Turesson's pioneer studies and other experiments	135
Experiments by American botanists	139
The widespread occurrence of ecotypes	144
Clines	144
Factors influencing the variation pattern	147
The refining of genecological experiments	147
Sampling populations	148
Cultivation experiments	151
The designed experiment	154
The interpretation of experiments	159

## 9 Pattern and process in plant populations 160

Variation within and between populations	161
Selection in populations	161
Selection in changing populations: r- and K-selection	164
Fitness	165
Developments in the investigation of populations	165
Selection: the study of single factors	166
Studies of several interacting factors: <i>Lotus</i> and <i>Trifolium</i>	166

- Distribution of cyanogenic variants 168
- The role of herbivory 168
- Small-scale influences on patterns and process in cyanogenic species 172
- Reciprocal transplant experiments 173
- Experimental evidence for disruptive selection 173
- Comparing 'young' and 'adult' generations 176
- Co-selection in swards 177
- The speed of microevolutionary change: agricultural experiments 177
- Rapid change in polluted sites 178
- Origin of metal-tolerant populations 181
- Hyperaccumulation 182
- Serpentine ecotypes 183
- Sulphur dioxide tolerance 184
- Ozone tolerance 184
- Evolution in arable areas 185
- Herbicide resistance 186
- Weed evolution 188
- Ecotypic variation in response to seasonal or irregular extreme habitat factors 188
- Phenotypic modification and genetic differentiation 189
- The use of model plants in the study of microevolution 190
- Detecting the signature of selection from genomic studies 190
- Studies of local adaptation involving cultivation experiments 191
- Combined studies of crucial life cycle traits 192
- Arabidopsis*: experiments on phenotypic plasticity 193
- Adaptive and non-adaptive characters 196
- Concluding remarks 199
- 10 Pattern and process: factors interacting with natural selection** 201
- Chance has profound effects 201
- Gene flow: population variability and structure 201
- Gene flow: early ideas 202
- Gene flow: agricultural experiments 203
- Gene flow: historic insights from the movement of pollen 203
- Gene flow: historic studies of seed dispersal 205
- 'Neighbourhoods' in wild populations 206
- Gene flow: studies using molecular tools 207
- Gene flow: insights from the use of microsatellite markers 208
- Gene flow by pollen movement 210
- Animal-pollinated trees and shrubs 211
- Seed/fruit dispersal 212
- Recent insights into gene flow from the study of transgenic crop plants 212
- Knowledge of gene flow is critical in plant conservation 214
- Gene flow: future directions of research 215
- 11 Populations: origins and extinctions** 216
- Metapopulations 216
- Founding events and bottleneck effects 217
- Designing experiments 218
- Case histories of founder events 218
- Founder effects in weedy and ornamental species 219
- Tracing the origin and spread of new populations 220
- Identification of sources of introduced taxa 220
- Once introduced, some species fail to establish 222
- Development of populations: the lag phase 222
- Changes in populations following introduction 223
- Phenotypic plasticity and developmental adaptability 223
- What factors contribute to the success of new populations? 226
- Population persistence and stability: clonal growth 228
- Size and longevity of clones: new insights using molecular markers 229
- Implications of clonal growth in populations 229
- Another major factor influencing population persistence: seed banks 232
- Processes involved in the extinction of populations 233
- Demographic stochasticity 233
- Pollen limitation causes an Allee Effect 235
- Effects of fragmentation 236
- Genetics of small populations 237
- Minimum viable populations 239
- Concluding comments 240

## 12 Species and speciation: concepts and models 242

- The morphological species concept 242
- Species definitions: taking into account pattern and process 243
- The Evolutionary Species Concept 243
- Phylogenetic (cladistic) species concept 243
- Ecological species concept 243
- The Biological Species Concept 243
- Origins of species 245
- Gradual (Geographic) Speciation 246
- Abrupt speciation 246
- Polyploidy 246

## 13 Allopatric speciation and hybridisation 250

- Evidence for gradual speciation 251
- Crossing experiment with species of *Layia* 252
- The interpretation of crossing experiments 252
- Studies of *Layia* using molecular methods 254
- Phylogenetic studies of the Californian Tarweeds 255
- Speciation genes 255
- Pre-pollination mechanisms 256
- Post-pollination barriers 256
- Cytoplasmic male sterility: its possible role in speciation in plants 257
- Genomic changes involved in speciation 258
- Future prospects for the study of speciation genes and genomic architecture 258
- Allopatric speciation and the taxonomist 259
- Natural hybridisation 260
- Natural hybridisation in the wild: classic studies 260
- The consequences of hybridisation: some theoretical considerations 264
- Empirical studies of reinforcement 266
- The emergence of the concept of introgressive hybridisation 270
- Introgression: classic approaches championed by Anderson 271
- Genetic investigations of hybridisation 274
- Chemotaxonomy: historic investigations of hybridisation 275
- Critical tests of the hypothesis of introgression 276
- Studies of introgression using molecular tools 276

- Introgression in Louisiana Irises 278
- Asymmetric introgression 279
- Cytoplasmic capture 282
- Chloroplast capture: another route 283
- Transgressive hybridisation 283
- Can it be confirmed that adaptive traits are transferred from one species to another by introgression? 283
- Speciation: where future advances might come 284
- The role of hitchhiking in speciation 284
- Next generation sequencing technologies 285
- Zones of introgression: are they ephemeral or long-standing? 285
- Introgression: a key concept in microevolution 285
- Taxonomic considerations 286
- Introgression: its role in evolution 286

## 14 Abrupt speciation 287

- A. The emergence and testing of key concepts in the study of polyploidy 287
  - The concept of polyploidy: early cytogenetic studies 287
  - Resynthesis of wild polyploids 288
  - The concepts of auto- and allopolyploidy 289
  - The concept of genome analysis 291
  - Genome analysis: uncertainties about ancestry 292
  - Genetic control of chromosome pairing: the implications for genome analysis 294
  - Studies of karyotypes 295
  - Chemical studies 296
  - In situ* hybridisation (ISH) 297
  - Polytopic multiple origin of polyploids 297
- B. Recent insights into polyploidy from molecular studies 302
  - Key questions about polyploidy and its significance 302
  - How many species are polyploid? 302
  - The delimitation of taxa within polyploid groups 302
  - Chromosome counts provide insights into the incidence of polyploidy 303
  - Historic estimates of the incidence of polyploidy 303
  - Evidence from fossil plants 304
  - Genetic evidence 304

- Polyploidy in other plant groups 305  
 The origin of new polyploids: the role of somatic events and unreduced gametes 305  
 Unreduced gametes: major insights from the studies of molecular genetics 306  
 Relative frequency of auto- and allopolyploidy 307  
 Unreduced gametes: is polyhaploidy important in plant evolution? 307  
 Polyploids: their potential for evolutionary change 307  
 Meiosis in polyploids 308  
 Evidence for structural changes in polyploids 309  
 Gene silencing: epigenetic alterations in gene expression 310  
 Transposable elements 311  
 Polyploids: the implications of their recurrent formation 311  
 Polyploids: cytogenetic changes in the longer term 311  
 Becoming established: what 'hurdles' do polyploids face? 312  
 Characteristics of polyploids as a group 313  
 Polyploids: ecological considerations 313  
 Polyploidy is often associated with a change in the breeding system 313  
 Evidence for hybridisation between diploid and polyploid plants in the wild 316  
 Reticulate patterns of variation in some groups 318  
 Are polyploids more frequent in particular geographical areas? 318  
 Current views on the present-day distribution of polyploids 321  
 The implications of ancient polyploidy for studies of geographical distributions 321  
 C. Other modes of abrupt speciation 322  
 Changes in chromosome number 322  
 Nested chromosome insertion 326  
 Plants with diffuse centromeres 326  
 Speciation following hybridisation: homoploid speciation 327  
 Minority disadvantage 328  
 Concluding remarks 329
- 15 The species concept 331**  
 Species as part of natural classifications 331  
 Mental reality of species 332  
 Do species have evolutionary reality? 333  
 The Biological Species Concept 333  
 The views of botanical taxonomists 334  
 Different definitions of species 335
- 16 Flowering plant evolution: advances, challenges and prospects 336**  
 The devising of phylogenetic trees 336  
 Classifications 336  
 Weighting characters 338  
 Numerical taxonomy 340  
 The influence of numerical taxonomy 341  
 Cladistics 342  
 Molecular phylogenetic analysis 344  
 Generation and analysis of molecular sequence data 346  
 Cladograms 346  
 The findings of molecular systematics 349  
 Layout of trees 350  
 Angiosperm phylogeny 351  
 Mapping additional information onto phylogenetic trees 353  
 Insights into evolutionary relationships provided by molecular phylogenetic studies 355  
 Timescales and timetrees: the role of fossils and molecular clocks 359  
 Universal or local clocks? 359  
 Origin and age of the Angiosperms 360  
 Floral evolution 362  
 Molecular genetics of floral evolution 363  
 The metaphor of the Tree of Life: its strengths and weaknesses 366  
 How far do phylogenetic trees reveal the course of evolution? 366  
 Plant evolution: limitations of the Tree of Life metaphor 370  
 Angiosperm evolution: what role for saltational change? 371  
 Constraints in evolution 375  
 Genome sequencing: prospects for further insights into phylogeny 375

Classification and the Tree of Life 376  
 Traditional taxonomy, cladism and molecular systematics 378

## 17 Historical biogeography 382

The Deluge and Noah's Ark 382  
 The Deluge and plant distribution 382  
 Eighteenth- and nineteenth-century investigations of plant geography 383  
 Long-range dispersal: early investigations 383  
 Land bridges: historic ideas 384  
 Continental drift 384  
 Pangaea and the geographical origin of the angiosperms 385  
 Ancient extinctions 386  
 The K–T extinction 387  
 The Pleistocene 391  
 Advances in plate tectonics on the interpretation of plant distributions 392  
 Modern phylogeographical investigations of plant distributions 393  
 Factors considered in modelling 394  
 Long-range dispersal: new insights 395  
 Single and recurrent long-range dispersal 396  
 Evidence for back colonisation 397  
 From which source(s) did long-distance migrants originate? 397  
 Disjunctions: long-distance dispersal or vicariance? 398  
 The investigation of 'divergence times' for taxa 399  
 Mediterranean island endemics: dating and ancestral area reconstruction 400  
 Phylogenetic studies of the opening of a land bridge 400  
 Migration: implications of specialisation 400  
 Quaternary Ice Ages: plant survival, migration and extinction 401  
 Refugia in different parts of the world 404  
 Implications of refuges 404  
 Migration from refuges 405  
 The refugial hypothesis of Amazonian speciation 407  
 Palaeoecology: insights from the study of ancient DNA 407

Multidisciplinary approaches in biogeography: two case histories 408  
 Concluding remarks 409

## 18 The evolutionary impact of human activities 411

Humans: as animals practising extreme niche construction 411  
 Human impact on the environment 411  
 The evolutionary effects of human activities 412  
 Assessing human impacts on ecosystems: sources of evidence 412  
 From natural ecosystems to cultural landscapes 413  
 The extent of human-modified ecosystems 414  
 Plants: their different roles on the cultural landscape stage 416  
 Interactions between plants 418  
 Do human activities present threats to biodiversity? 419  
 Human influences: habitat loss and fragmentation 419  
 Human influences: introduced organisms 420  
 The ecological consequences of introduced species 422  
 Human influences: the effects of pollution 422  
 Eutrophication 423  
 Acid Rain 423  
 Human influences: global climate change 424  
 The Greenhouse Effect 424  
 Direct observation of climate change 425  
 Predictions of future climate change 425  
 Climate change: human influences 426  
 Climate change sceptics and deniers 426  
 Biological effects of climate change: species adapt, move or die 427  
 Climate change presents new selection pressures 427  
 The footprint of climate change 428  
 Forecasting future changes in distribution 430  
 Adaptive responses to climate change 431  
 Ecosystem changes under climate change 432  
 How many species are threatened with extinction? 434  
 Assessment of extinction risk by experts using IUCN and other categories 435

- Endangered species: an overview 437  
 Concluding remarks 438
- 19 The taxonomic challenge ahead 439**  
 What are the prospects of the completion of a catalogue of life? 439  
 The renewal of taxonomy 440  
 Barcoding: its history and potential in taxonomic investigations 442  
 Barcoding: a route to the reinvasion of taxonomy? 445  
 The status of taxonomy in an era dominated by molecular biology 446  
 Will Earth's species all be named before they become extinct? 447
- 20 Conservation: from protection to restoration and beyond 449**  
*Ex situ* conservation 449  
 Seed banks 452  
*Ex situ* conservation: the future 453  
 The role of protected areas in countering the threat of extinction 454  
 Managing reserves to prevent extinction of species 457  
 Restoration ecology 458  
 Creative conservation: community translocations 459  
 Creative conservation: wildflower mixtures 459  
 Plants/seed of native provenance 459
- Manipulating and creating populations in an attempt to prevent extinction 460  
 Restocking (augmentation, reinforcement) of existing population(s) 460  
 Restorations using clonal plants from various sources 461  
 Re-establishment (reinstatement) of an extinct population 461  
 Founding population(s) in new areas 462  
 Mix or match: inbreeding and outbreeding depression 462  
 Founding new populations: seed v. plants 463  
 Restoration projects: issues and prospects 463  
 Species restoration projects: what counts as success? 463  
 Recommendations for better restorations 463  
 Aims and objectives of conservation: looking back and considering the future 465  
 Assisted migration 466  
 Major dilemmas with past-orientated conservation models 469  
 Setting priorities in conservation 470  
 Creative conservation: economic and political considerations 471  
 Concluding remarks 472
- Glossary* 478  
*References* 482  
*Index* 569
