About the IFST Advances in Food Science Book Series, xiii

List of contributors, xv

<b>1</b>	Emerging technologies in meat processing, 1	
	<i>Enda J. Cummins &amp; James G. Lyng</i>	
1.1	Context and challenges	1
1.2	Book objective	2
1.3	Book structure	2
1.4	Conclusion	5

## **Part I: Novel processing techniques**

<b>2</b>	Irradiation of meat and meat products, 9	
	<i>Ki Chang Nam, Cheorun Jo &amp; Dong U. Ahn</i>	
2.1	Summary	9
2.2	Theory of irradiation of foods	9
2.2.1	Forms of irradiation	9
2.2.2	Mode of action	12
2.2.3	Advantages and disadvantages of irradiation	13
2.3	Irradiation equipment	15
2.3.1	Case studies – irradiation of foods	15
2.3.2	Brief overview of available irradiation equipments	17
2.3.3	Manufacturers of irradiation equipment	26
2.4	Future role for irradiation in the preservation of foods	30
2.4.1	Consumer education	32
2.4.2	Use of irradiation as a part of hurdle technology	32
2.4.3	Research on the mechanisms and prevention of quality changes in irradiated foods	33
<b>3</b>	High-pressure processing of meat and meat products, 37	
	<i>Sandrine Guillou, Marion Lerasle, H�el�ene Simonin &amp; Michel Federighi</i>	
3.1	Introduction	37
3.2	Theory of high-pressure preservation and decontamination of foods	38
3.2.1	What is the mode of action when used for preservation and decontamination?	38
3.2.2	Influence of high pressure on microbial contamination of meat	39
3.2.3	Modification of meat induced by high pressure	51

3.2.4	Advantages and disadvantages of high-pressure preservation and decontamination	55
3.3	High-pressure applications	55
3.3.1	HP pasteurization	55
3.3.2	Sterilization – pressure-assisted thermal processing (PATP) or pressure-assisted thermal sterilization (PATS)	58
3.3.3	Texturization	59
3.3.4	Freezing – thawing	59
3.4	High-pressure equipment	60
3.4.1	Case studies – commercial application of HHP-treated meat products	60
3.4.2	High-pressure carbon dioxide decontamination (HPCD)	74
3.4.3	Brief overview of available high-pressure equipment	82
3.4.4	The principal components of high-pressure equipment	83
3.4.5	Compression systems	84
3.4.6	Manufacturers of high-pressure equipment	85
3.5	Future role for high pressure in the preservation and decontamination of foods	85
3.5.1	Substitution of thermal treatments for high value-added and new functional products	85
3.5.2	Meat tenderization	86
3.5.3	Combination of HPP and other technologies	87
<b>4</b>	<b>Electroprocessing of meat and meat products, 103</b>	
	<i>Cristina Arroyo &amp; James G. Lyng</i>	
4.1	Introduction to electroprocessing technologies	103
4.2	Non-thermal electroprocessing of meat	103
4.2.1	Electrical stimulation	103
4.2.2	High-voltage pulsed electric fields	105
4.3	Thermal electroprocessing (i.e. electroheating) of meat	111
4.3.1	Heating mechanisms	112
4.3.2	History of electroprocessing of meat	113
4.3.3	Physical properties affecting OH, RF and MW heating	116
4.3.4	Applications in meat processing	120
4.4	Future of electroprocessing of meat	124
4.5	Equipment suppliers	124
<b>5</b>	<b>Application of infrared and light-based technologies to meat and meat products, 131</b>	
	<i>Tatiana Koutchma</i>	
5.1	Introduction	131
5.2	Theory of UV, IR, and high-intensity light pulse preservation of foods	132
5.3	Infrared radiation	133
5.3.1	Mode of action when used for preservation	134

---

5.3.2	Advantages and disadvantages of IR radiation	134
5.3.3	Factors affecting interaction between infrared radiation and food	135
5.3.4	Brief overview of available equipment	135
5.3.5	Case studies – infrared heating of meats	136
5.3.6	Manufacturers of infrared equipment	136
5.4	Ultraviolet radiation	136
5.4.1	Mode of action when used for preservation	136
5.4.2	Advantages and disadvantages of UV radiation	137
5.4.3	Factors affecting interaction between UV radiation and materials	137
5.4.4	Brief overview of available equipment	138
5.4.5	Case studies – UV in food preservation	138
5.4.6	Manufacturers of UV generation equipment	142
5.5	High-intensity light pulses	143
5.5.1	Mode of action when used for preservation	143
5.5.2	Advantages and disadvantages of high-intensity pulses	143
5.5.3	Factors affecting interaction between high-intensity pulses and materials	143
5.5.4	Case studies – High-intensity light pulses in food preservation	144
5.5.5	Brief overview of available high-intensity light pulse equipment	144
5.6	Future role for UV, IR, and high-intensity light pulses in the preservation of foods	145
<b>6</b>	<b>Ultrasound processing applications in the meat industry, 149</b>	
	<i>N.N. Misra, Patrick J. Cullen &amp; Brijesh K. Tiwari</i>	
6.1	Introduction	149
6.2	Fundamentals of ultrasound processing	150
6.3	Ultrasound processing equipment	153
6.4	Ultrasound for decontamination of meat	154
6.5	Applications of ultrasound in meat processing	155
6.5.1	Tenderization of meat	155
6.5.2	Curing and pickling of meat	156
6.5.3	Sausage production	160
6.5.4	Meat industry effluent treatment	162
6.5.5	Meat cooking	163
6.5.6	Cleaning	164
6.6	Concluding remarks	165
<b>7</b>	<b>Application of hydrodynamic shock wave processing associated with meat and processed meat products, 171</b>	
	<i>James R. Claus</i>	
7.1	Introduction	171

7.2	Applicability of hydrodynamic shock waves on meat and meat products	175
7.3	Approaches to the generation of hydrodynamic shock waves, and the theory and mode of action relative to muscle food applications	175
7.4	Advantages and disadvantages of hydrodynamic shock wave	180
7.4.1	Advantages of hydrodynamic shock wave processing	181
7.4.2	Disadvantages of hydrodynamic shock wave processing	182
7.5	Case studies: hydrodynamic shock wave treatment of meat products	185
7.5.1	Tenderness	185
7.5.2	Further processed meats	190
7.5.3	Shelf-life and food safety	191
7.6	Developmental advances in hydrodynamic shock wave equipment	193
7.7	Brief overview of available hydrodynamic shock wave equipment and manufacturers of hydrodynamic shock wave equipment	203
<b>8</b>	<b>Robotics in meat processing, 211</b> <i>Kompal Joshi, Tomas Norton, Jesús M. Frías &amp; Brijesh K. Tiwari</i>	
8.1	Introduction	211
8.2	Application of robotics in meat processing	212
8.2.1	Advantages and disadvantages of robotics for meat processing	213
8.3	Mechatronic and robotic systems in the food industry	214
8.3.1	Animal reception	214
8.3.2	Stunning and bleeding	214
8.3.3	Dressing, evisceration, cutting and boning	215
8.3.4	Packaging	218
8.4	Case studies	218
8.4.1	Automation in lamb processing	218
8.4.2	Automation in pig processing	221
8.5	Future role for robotics in the processing of meat and meat products	226

## **Part II: Novel Packaging and meat functionality**

<b>9</b>	<b>Packaging systems and materials used for meat products with particular emphasis on the use of oxygen scavenging systems, 233</b> <i>Malco Cruz-Romero &amp; Joseph P. Kerry</i>	
9.1	Introduction	233
9.2	Case-ready packaging	235
9.2.1	Benefits of case-ready packaging system	235

9.2.2	Packaging requirements for case-ready meat products	237
9.2.3	Product characteristics associated with the quality of case-ready MAP meat products	240
9.2.4	Gases used in MAP of meat products	241
9.2.5	Brief overview of packaging materials used in MAP for case-ready meat products	245
9.2.6	Packaging systems used in case-ready MAP meat products	247
9.2.7	Advantages and disadvantages of MAP for case-ready meat products	249
9.2.8	Brief overview of packaging equipment used for MAP of case-ready meat products	249
9.2.9	Novel packaging systems used for case-ready MAP meat products	251
9.3	Theory of MAP/oxygen scavenging technology for meat products	253
9.3.1	Commercial scavenging systems used for case-ready meat packs	256
9.4	Future role for novel packaging systems in the preservation of meat	258
<b>10</b>	<b>Smart packaging solutions encompassing nanotechnology, 265</b>	
	<i>Maeve Cushen &amp; Enda J. Cummins</i>	
10.1	Introduction	265
10.2	Smart packaging	266
10.2.1	Theory of smart packaging	266
10.2.2	Modes of action	267
10.2.3	Improved packaging	267
10.2.4	Active packaging	270
10.2.5	Intelligent packaging	276
10.3	Conclusion	279
<b>11</b>	<b>Probiotic functionality in meat, 285</b>	
	<i>Muhammad Issa Khan, Cheorun Jo &amp; Ubaid-ur-Rahman</i>	
11.1	Introduction	285
11.2	Ecology of gastrointestinal tract (GIT)	286
11.3	Identification of potential microorganisms	289
11.4	Selection of probiotics	290
11.4.1	Safety of human origin probiotics	292
11.4.2	Antibiotic resistance aspects	292
11.4.3	Physiological aspects	292
11.4.4	Technological/industrial aspects	293
11.4.5	Food technology's perspective	293
11.4.6	Problems during selection of probiotics	294
11.5	Probiotic meat products	294
11.5.1	Probiotics for meat products	295

11.5.2	Technological characteristics of probiotic cultures for meat products	296
11.5.3	Physiological characteristics of meat probiotics	298
11.5.4	Addition of probiotic cultures in fermented meat products	300
11.5.5	Fermented meat as a probiotic product	300
11.6	Functionality of probiotics	303
11.6.1	Adhesion and subsequent colonization	304
11.6.2	Modulation of immune system	305
11.6.3	Antagonism and competitive inhibition	306
11.6.4	Antimutagenicity and anticarcinogenicity	307
11.7	Disease prevention by probiotics	309
11.7.1	Gastrointestinal disorders	309
11.7.2	Cancer	310
11.7.3	Effect on blood lipids	312
11.8	Role of probiotics in function food development	312
11.9	Conclusion	314

### **Part III: Assessment techniques for meat quality and safety**

<b>12</b>	Rapid methods for microbial analysis of meat and meat products, 323 <i>Agapi Doulgeraki, Efstathios Panagou &amp; George-John Nychas</i>	
12.1	Introduction	323
12.2	Theory of high rapid methods	325
12.2.1	Mode of action of rapid methods for microbial quality	326
12.2.2	Advantages and disadvantages of rapid methods	326
12.2.3	Factors affecting interaction between rapid methods and meat matrix	328
12.3	Rapid method tools	330
12.3.1	Case studies – rapid methods evaluation of foods	330
12.3.2	Brief overview of available rapid methods	331
12.3.3	Industry usage of rapid methods	339
12.4	Future role for rapid methods in foods safety	340
<b>13</b>	The use of hyperspectral techniques in evaluating quality and safety of meat and meat products, 345 <i>Di Wu &amp; Da-Wen Sun</i>	
13.1	Introduction	345
13.2	Hyperspectral techniques	347
13.2.1	Basics of spectroscopy	347
13.2.2	Basics of hyperspectral imaging	348
13.2.3	Hyperspectral acquisition modes	355
13.2.4	Terminology	357

---

13.3 Applications in evaluating quality and safety of meat and meat products	358
13.4 Advantages and disadvantages of hyperspectral techniques in meat applications	367
13.4.1 Common advantages of spectroscopy and hyperspectral imaging	367
13.4.2 Common disadvantages of spectroscopy and hyperspectral imaging	367
13.4.3 Advantages of hyperspectral imaging over spectroscopy	367
13.4.4 Limitations of hyperspectral imaging	368
13.5 Conclusion	369
<b>14</b> Online meat quality and compositional assessment techniques, 375 <i>Kumari Shikha Ojha, Brijesh K. Tiwari, Joseph P. Kerry &amp; Patrick J. Cullen</i>	
14.1 Summary	375
14.2 Introduction	375
14.3 In vivo methods of carcass evaluation	376
14.3.1 X-ray-based technologies	377
14.3.2 Nuclear magnetic resonance and magnetic resonance imaging	380
14.3.3 Ultrasound	381
14.4 Post-mortem compositional analysis	383
14.4.1 Total body electrical conductivity	383
14.4.2 Video image analysis	384
14.4.3 Optical probes	386
14.5 Conclusions	386
<b>15</b> Meat authenticity, 391 <i>Yan Zhao</i>	
15.1 Introduction	391
15.2 Theory of authenticity in the meat industry	391
15.2.1 Significance of the application of authenticity techniques on meat	392
15.2.2 Content of authenticity of meat	392
15.2.3 Factors affecting accuracy	397
15.3 Authenticity methods	398
15.3.1 Case studies – authenticity applications in meat	398
15.3.2 Brief overview of authenticity equipment	398
15.4 Future role for authenticity in food	402
<b>16</b> Regulation and legislative issues, 407 <i>Fiona Lalor &amp; Patrick Wall</i>	
16.1 Introduction	407
16.2 Overview of principles of food regulation	408

16.2.1	Risk assessment should underpin risk management decisions	409
16.2.2	Sanitary and phytosanitary measures (SPS) and technical barriers to trade (TBT)	409
16.2.3	International laws	410
16.3	Food safety regulation within the European Union	413
16.4	Meat inspection	416
16.4.1	General standards for meat processing	418
16.4.2	Microbiological limits for meat products	418
16.4.3	Novel processing techniques	418
16.5	Marketing challenges: reports of adverse health effects	421
16.6	Conclusion	423
