Acknowledgments .....	xvii
List of symbols and abbreviations .....	xix
About the authors .....	xxiii

## **SECTION A FOUNDATIONS** 1

<b>CHAPTER 1 Introduction.....</b>	<b>3</b>
Intended Learning Outcomes.....	4
1.1 Introduction to Microwave Electronics.....	4
1.1.1 What Are Microwaves?.....	4
1.1.2 The Importance of Radio Frequency Electronics.....	6
1.1.3 Electromagnetism Basics.....	7
1.2 Properties of Materials at Microwave Frequencies.....	12
1.2.1 Resistivity.....	13
1.2.2 The Skin Effect .....	15
1.2.3 Permittivity and Permeability .....	16
1.2.4 Losses in Dielectric and Magnetic Materials at Microwave Frequencies.....	18
1.3 Behavior of Real Components at Microwave Frequencies .....	20
1.3.1 Wire.....	20
1.3.2 Resistors.....	21
1.3.3 Capacitors.....	23
1.3.4 Inductors.....	25
1.3.5 Surface Mount Devices .....	27
1.4 The Importance of Impedance Matching .....	28
1.4.1 Maximum Power Transfer.....	28
1.5 Common Microwave Metrics.....	31
1.5.1 Reflection Coefficient .....	31
1.5.2 Standing Wave Ratio (SWR).....	32
1.5.3 Return Loss .....	33
1.6 Quality Factor, $Q$ .....	34
1.6.1 The Meaning of $Q$ .....	34
1.6.2 Loaded $Q$ and External $Q$ .....	40
1.6.3 $Q$ of a One-Port Resonator .....	41
1.7 Takeaways.....	46
Tutorial Problems.....	47
References.....	48

<b>CHAPTER 2 Transmission Line Theory .....</b>	<b>51</b>
Intended Learning Outcomes.....	51
<b>2.1 Introduction .....</b>	<b>52</b>
<b>2.2 Propagation and Reflection on a Transmission Line .....</b>	<b>54</b>
<b>2.3 Sinusoidal Steady-State Conditions: Standing Waves.....</b>	<b>63</b>
<b>2.4 Primary Line Constants.....</b>	<b>68</b>
<b>2.5 The Lossless Transmission Line .....</b>	<b>71</b>
<b>2.6 Derivation of the Characteristic Impedance .....</b>	<b>72</b>
<b>2.7 Transmission Lines With Arbitrary Terminations .....</b>	<b>74</b>
<b>2.7.1 Input Impedance at an Arbitrary Point on a Terminated             Line .....</b>	<b>76</b>
<b>2.7.2 Special Cases: Short-Circuit Line .....</b>	<b>78</b>
<b>2.7.3 Special Cases: Open-Circuit Line .....</b>	<b>80</b>
<b>2.7.4 Special Cases: Matched Line .....</b>	<b>81</b>
<b>2.8 The Effect of Line Losses .....</b>	<b>81</b>
<b>2.8.1 Characteristic Impedance of Lossy Lines .....</b>	<b>81</b>
<b>2.8.2 Dispersion.....</b>	<b>82</b>
<b>2.9 Power Considerations.....</b>	<b>83</b>
<b>2.10 Takeaways .....</b>	<b>85</b>
Tutorial Problems.....	86
References.....	87
<b>CHAPTER 3 Practical Transmission Lines .....</b>	<b>89</b>
Intended Learning Outcomes.....	89
<b>3.1 Introduction .....</b>	<b>90</b>
<b>3.2 Waveguide.....</b>	<b>90</b>
<b>3.3 Co-Axial Cable.....</b>	<b>95</b>
<b>3.4 Twisted Pair.....</b>	<b>98</b>
<b>3.5 Microstrip .....</b>	<b>99</b>
<b>3.6 Microstrip Discontinuities .....</b>	<b>105</b>
<b>3.6.1 Edge Effects in Microstrip.....</b>	<b>105</b>
<b>3.6.2 Microstrip Gaps and DC Blocks .....</b>	<b>106</b>
<b>3.6.3 Microstrip Bends and Curves.....</b>	<b>108</b>
<b>3.6.4 Microstrip Step Width Change .....</b>	<b>110</b>
<b>3.7 stripline .....</b>	<b>111</b>
<b>3.8 Coplanar Waveguide .....</b>	<b>112</b>
<b>3.9 Takeaways .....</b>	<b>114</b>
Tutorial Problems.....	116
References.....	117

<b>CHAPTER 4 The Smith Chart.....</b>	<b>121</b>
Intended Learning Outcomes .....	121
<b>4.1 Introduction to the Smith Chart.....</b>	<b>122</b>
<b>4.2 Smith Chart Derivation .....</b>	<b>122</b>
4.2.1 Derivation of Constant Resistance Circles.....	124
4.2.2 Derivation of Constant Reactance Circles .....	126
4.2.3 Building the Complete Smith Chart.....	127
<b>4.3 Using the Smith Chart.....</b>	<b>131</b>
4.3.1 Conversion Between Impedance and Reflection Coefficient.....	131
4.3.2 Impedance at Any Point on a Transmission Line .....	133
4.3.3 Constant <i>Q</i> Contours on the Smith Chart .....	134
<b>4.4 Smith Chart Variants.....</b>	<b>135</b>
4.4.1 Combined Impedance-Admittance Smith Chart.....	135
4.4.2 Compressed Smith Chart.....	137
<b>4.5 Takeaways .....</b>	<b>137</b>
Tutorial Problems.....	138
References .....	140
<b>SECTION B MICROWAVE CIRCUIT ANALYSIS</b>	<b>141</b>
<b>CHAPTER 5 Immittance Parameters .....</b>	<b>143</b>
Intended Learning Outcomes .....	143
<b>5.1 Introduction .....</b>	<b>144</b>
5.1.1 The Admittance or <i>Y</i> -Parameters .....	145
5.1.2 The Impedance or <i>Z</i> -Parameters .....	146
5.1.3 The Hybrid or <i>h</i> -Parameters.....	149
5.1.4 The Chain or <i>ABCD</i> -Parameters .....	150
<b>5.2 Conversion Between Immittance Parameters .....</b>	<b>152</b>
<b>5.3 Input and Output Impedance of a Two-Port in Terms of         Immittance Parameters .....</b>	<b>153</b>
<b>5.4 Classification of Immittance Matrices .....</b>	<b>155</b>
5.4.1 Activity and Passivity.....	155
5.4.2 Unilaterality .....	158
5.4.3 Reciprocity and Symmetry .....	158
<b>5.5 Immittance Parameter Representation of Active Devices.....</b>	<b>159</b>
5.5.1 Two-Port Representation of Transistors.....	159
<b>5.6 Immittance Parameter Analysis of Two-Ports With Feedback...</b>	<b>161</b>
5.6.1 The Benefits of Feedback.....	161
5.6.2 Shunt Feedback .....	161

5.6.3 Series Feedback .....	161
5.6.4 Miller's Theorem .....	162
<b>5.7 Takeaways .....</b>	<b>164</b>
Tutorial Problems.....	164
References.....	166
<b>CHAPTER 6 S-Parameters.....</b>	<b>167</b>
Intended Learning Outcomes .....	168
<b>6.1 Introduction .....</b>	<b>168</b>
6.1.1 Limitations of the Immittance Parameter Approach.....	169
6.1.2 Definition of the Scattering Parameters .....	170
<b>6.2 Input and Output Impedance of a Two-Port in Terms of S-Parameters .....</b>	<b>174</b>
<b>6.3 Classification of S-Matrices .....</b>	<b>175</b>
6.3.1 Lossless and Reciprocal Networks .....	175
6.3.2 Activity and Passivity.....	176
6.3.3 Unilaterality .....	180
<b>6.4 Signal Flow Graphs.....</b>	<b>180</b>
6.4.1 Decomposition of Signal Flow Graphs .....	181
<b>6.5 Scattering Transfer Parameters.....</b>	<b>187</b>
<b>6.6 Relationship Between S-Parameters and Immittance Parameters .....</b>	<b>190</b>
<b>6.7 Measurement of S-Parameters .....</b>	<b>191</b>
6.7.1 The Network Analyzer .....	193
6.7.2 VNA Measurement Procedure.....	195
6.7.3 Network Analyzer Error Correction .....	195
6.7.4 One-Port Error Model (The “Three-Term” Model).....	196
6.7.5 Two-Port Error Model (The “12-Term” Model).....	199
<b>6.8 Takeaways .....</b>	<b>201</b>
Tutorial Problems.....	202
References.....	204
<b>CHAPTER 7 Gain and Stability of Active Networks.....</b>	<b>205</b>
Intended Learning Outcomes .....	205
<b>7.1 Introduction .....</b>	<b>206</b>
<b>7.2 Power Gain in Terms of Immittance Parameters.....</b>	<b>206</b>
7.2.1 Voltage Gain of an Active Two-Port .....	206
7.2.2 Power Gain of an Active Two-Port.....	207
<b>7.3 Stability in Terms of Immittance Parameters .....</b>	<b>215</b>
<b>7.4 Stability in Terms of S-Parameters .....</b>	<b>217</b>
7.4.1 Introduction .....	217

7.4.2 Stability Circles .....	217
7.4.3 Stability Criteria in Terms of <i>S</i> -Parameters.....	224
<b>7.5 Power Gain in Terms of <i>S</i>-Parameters.....</b>	<b>229</b>
7.5.1 Maximum Available Gain and Conjugate Terminations .....	235
7.5.2 Constant Power Gain Circles .....	238
<b>7.6 Takeaways.....</b>	<b>241</b>
Tutorial Problems.....	242
References.....	243
<b>CHAPTER 8 Three-Port Analysis Techniques.....</b>	<b>245</b>
Intended Learning Outcomes .....	245
<b>8.1 Introduction .....</b>	<b>246</b>
<b>8.2 Three-Port Impittance Parameters .....</b>	<b>247</b>
<b>8.3 Three-Port <i>S</i>-Parameters .....</b>	<b>249</b>
8.3.1 Derivation of Three-Port <i>S</i> -Parameters .....	250
8.3.2 Calculation of Reduced Two-Port <i>S</i> -Parameters .....	257
<b>8.4 Configuration Conversion.....</b>	<b>259</b>
8.4.1 Common Base/Gate Configuration.....	260
8.4.2 Common Collector/Drain Configuration.....	260
<b>8.5 Feedback Mappings .....</b>	<b>261</b>
8.5.1 Introduction .....	261
8.5.2 Classification of Feedback Mappings.....	266
<b>8.6 Application of Three-Port Design Techniques.....</b>	<b>271</b>
8.6.1 Generating Negative Resistance in Transistors.....	271
8.6.2 The Active Isolator.....	275
<b>8.7 Reverse Feedback Mappings.....</b>	<b>278</b>
<b>8.8 Takeaways.....</b>	<b>281</b>
Tutorial Problems.....	281
References.....	282
<b>CHAPTER 9 Lumped Element Matching Networks.....</b>	<b>285</b>
Intended Learning Outcomes .....	285
<b>9.1 Introduction .....</b>	<b>286</b>
9.1.1 The Need for Impedance Matching .....	286
<b>9.2 <i>L</i>-Section Matching Networks.....</b>	<b>287</b>
9.2.1 <i>L</i> -Section Matching of a Resistive Source to a Resistive Load.....	287
9.2.2 Generalized Analytical Design of Type 1 <i>L</i> -Section .....	291
9.2.3 Generalized Analytical Design of Type 2 <i>L</i> -Section .....	292
9.2.4 <i>L</i> -Section Design Using the Smith Chart .....	293

9.2.5	Forbidden Regions on the Smith Chart .....	297
9.2.6	Four-Step Design Procedure for Generalized <i>L</i> -Sections .....	298
<b>9.3</b>	Three Element Matching Networks .....	300
9.3.1	The $\pi$ -Section Matching Network.....	301
9.3.2	The <i>T</i> -Section Matching Network.....	305
9.3.3	$\pi$ to <i>T</i> Transformation.....	307
<b>9.4</b>	Bandwidth of Lumped Element Matching Networks .....	309
<b>9.5</b>	Takeaways.....	309
	Tutorial Problems.....	310
	References.....	310
<b>CHAPTER 10 Distributed Element Matching Networks .....</b>		<b>311</b>
	Intended Learning Outcomes .....	311
<b>10.1</b>	Introduction .....	312
<b>10.2</b>	Impedance Transformation With Line Sections .....	312
<b>10.3</b>	Single Stub Matching.....	314
10.3.1	Single Stub Matching: Analytical Approach .....	316
10.3.2	Single Stub Matching: Graphical Approach.....	319
<b>10.4</b>	Double Stub Matching.....	324
10.4.1	Double Stub Matching: Analytical Approach.....	326
10.4.2	Double Stub Matching: Graphical Approach.....	329
10.4.3	Forbidden Regions for Double Stub Matching.....	332
<b>10.5</b>	Triple Stub Matching.....	340
<b>10.6</b>	Quarter-Wave Transformer Matching .....	340
<b>10.7</b>	Bandwidth of Distributed Element Matching Networks.....	344
10.7.1	Bandwidth of Stub Matching Networks .....	344
10.7.2	Bandwidth of Quarter-Wave Transformers.....	347
<b>10.8</b>	Summary .....	349
<b>10.9</b>	Takeaways .....	350
	Tutorial Problems.....	351
	References .....	352
<b>SECTION C MICROWAVE CIRCUIT DESIGN</b>		<b>353</b>
<b>CHAPTER 11 Microwave Semiconductor Materials and Diodes .....</b>		<b>355</b>
	Intended Learning Outcomes .....	355
<b>11.1</b>	Introduction .....	356
<b>11.2</b>	Choice of Microwave Semiconductor Materials.....	357
<b>11.3</b>	Microwave Semiconductor Fabrication Technology .....	363

11.3.1 Photolithography .....	363
11.3.2 Molecular Beam Epitaxy .....	365
<b>11.4</b> The <i>pn</i> -Junction .....	366
<b>11.5</b> Schottky Diodes.....	370
<b>11.6</b> Varactor Diodes .....	371
<b>11.7</b> PIN Diodes .....	375
<b>11.8</b> Tunnel Diodes .....	380
<b>11.9</b> Gunn Diodes .....	383
11.9.1 Gunn Diode Oscillators.....	385
<b>11.10</b> The IMPATT Diode Family .....	388
<b>11.11</b> Takeaways .....	389
References .....	390
<b>CHAPTER 12 Microwave Transistors and MMICs .....</b>	<b>395</b>
Intended Learning Outcomes .....	396
<b>12.1</b> Introduction .....	396
<b>12.2</b> Microwave Bipolar Junction Transistors.....	397
12.2.1 BJT Construction.....	397
12.2.2 The BJT Equivalent Circuit.....	398
12.2.3 <i>h</i> -Parameters of the BJT Hybrid- $\pi$ Equivalent Circuit..	404
<b>12.3</b> Heterojunction Bipolar Transistor .....	407
<b>12.4</b> Microwave Field-Effect Transistors.....	408
12.4.1 The Metal Semiconductor FET .....	408
12.4.2 MESFET Construction.....	408
12.4.3 High Electron Mobility Transistors Construction .....	409
<b>12.5</b> MESFET and HEMT Equivalent Circuit.....	410
12.5.1 MESFET Equivalent Circuit Parameter Extraction .....	414
<b>12.6</b> Monolithic Microwave Integrated Circuits .....	415
<b>12.7</b> MMIC Technologies .....	416
<b>12.8</b> MMIC Circuit Elements.....	418
12.8.1 MMIC MESFETs .....	418
12.8.2 MMIC Diodes.....	419
12.8.3 MMIC Resistors.....	420
12.8.4 MMIC Capacitors.....	422
12.8.5 MMIC Inductors.....	424
12.8.6 MMIC Transmission Lines.....	427
12.8.7 Via Holes, Bond Pads, and Other Structures.....	428
<b>12.9</b> MMIC Application Example.....	429
<b>12.10</b> Takeaways .....	432
References .....	432

<b>CHAPTER 13 Microwave Amplifier Design .....</b>	<b>439</b>
Intended Learning Outcomes .....	439
<b>13.1</b> Introduction .....	<b>440</b>
<b>13.2</b> Single-Stage Amplifier Design .....	<b>440</b>
13.2.1 The Unilateral Approximation .....	445
13.2.2 Unilateral Gain.....	445
13.2.3 Circles of Constant Unilateral Gain.....	447
13.2.4 Error Involved in the Unilateral Approximation .....	448
<b>13.3</b> Single-Stage Feedback Amplifier Design.....	449
<b>13.4</b> Multistage Amplifiers.....	452
13.4.1 Fundamental Limits on the Bandwidth of Interstage Matching Networks.....	456
<b>13.5</b> Broadband Amplifiers .....	460
13.5.1 Lossy Matched Amplifiers .....	461
13.5.2 Broadband Feedback Amplifiers .....	462
13.5.3 Distributed Amplifiers.....	464
<b>13.6</b> Takeaways .....	470
References.....	471
<b>CHAPTER 14 Low-Noise Amplifier Design.....</b>	<b>475</b>
Intended Learning Outcomes .....	475
<b>14.1</b> Introduction .....	<b>476</b>
<b>14.2</b> Types of Electrical Noise.....	<b>477</b>
14.2.1 Thermal Noise .....	477
14.2.2 Shot Noise.....	479
14.2.3 Flicker Noise .....	480
<b>14.3</b> Noise Factor, Noise Figure, and Noise Temperature .....	481
<b>14.4</b> Representation of Noise in Active Two-Port Networks .....	483
<b>14.5</b> Single-Stage Low-Noise Amplifier Design.....	489
14.5.1 Circles of Constant Noise Figure .....	489
14.5.2 Noise Factor of Passive Two-Ports .....	499
<b>14.6</b> Multistage Low-Noise Amplifier Design.....	500
14.6.1 Circles of Constant Noise Measure .....	503
<b>14.7</b> Noise Measurements .....	507
14.7.1 Noise Figure Measurement .....	507
14.7.2 Noise Characterization of Microwave Transistors.....	512
<b>14.8</b> Takeaways .....	514
References.....	515

**CHAPTER 15 Microwave Oscillator Design ..... 519**

Intended Learning Outcomes .....	519
<b>15.1</b> Introduction .....	520
<b>15.2</b> RF Feedback Oscillators .....	524
15.2.1 The Feedback Oscillator Model .....	524
15.2.2 Colpitts Oscillator.....	526
15.2.3 Hartley Oscillator.....	528
15.2.4 Clapp/Gouriet Oscillator.....	529
<b>15.3</b> Cross-Coupled Oscillators.....	531
<b>15.4</b> Negative Resistance Oscillators.....	535
<b>15.5</b> Frequency Stabilization.....	539
15.5.1 Crystal Stabilization .....	540
15.5.2 Cavity Stabilization.....	544
15.5.3 Dielectric Resonator Stabilization.....	547
<b>15.6</b> Voltage Controlled Oscillators.....	550
15.6.1 YIG Tuned Oscillators .....	550
15.6.2 Varactor Tuned Oscillators.....	551
<b>15.7</b> Injection Locked and Synchronous Oscillators.....	553
<b>15.8</b> Takeaways.....	556
References .....	556

**CHAPTER 16 Low-Noise Oscillator Design ..... 559**

Intended Learning Outcomes .....	559
<b>16.1</b> Introduction .....	560
<b>16.2</b> Definition of Phase Noise .....	561
<b>16.3</b> Why Oscillator Phase Noise Is Important.....	564
<b>16.4</b> Root Causes of Phase Noise.....	565
16.4.1 The Thermal Noise Component of Phase Noise .....	565
16.4.2 Flicker Noise in Oscillators.....	566
<b>16.5</b> Modeling Oscillator Phase Noise .....	567
16.5.1 Analytical Phase-Noise Models: Feedback Oscillator .....	571
16.5.2 Analytical Phase-Noise Models: Negative Resistance Oscillator .....	579
16.5.3 Comparison of Feedback and Negative Resistance Oscillator Phase-Noise Equations .....	581
<b>16.6</b> Low-Noise Oscillator Design.....	582
16.6.1 Low-Noise Design: Resonator .....	582
16.6.2 Low-Noise Design: Transistor .....	582

16.7	Phase-Noise Measurements .....	583
16.7.1	The Direct Method .....	583
16.7.2	The Phase Detector Method .....	584
16.7.3	The Delay Line/Frequency Discriminator Method .....	585
16.8	Takeaways .....	586
	References .....	587
<b>CHAPTER 17</b>	<b>Microwave Mixers .....</b>	<b>589</b>
	Intended Learning Outcomes .....	589
17.1	Introduction .....	590
17.2	Mixer Characterization .....	591
17.2.1	Conversion Gain .....	592
17.2.2	Isolation .....	592
17.2.3	Dynamic Range .....	592
17.2.4	Third-Order Intercept Point: IP3 .....	593
17.2.5	Noise Figure .....	594
17.3	Basic Mixer Operation .....	594
17.4	Passive Mixer Circuits .....	599
17.4.1	Nonlinear Diode Mixer .....	600
17.4.2	Passive Double Balanced Diode Mixer .....	601
17.5	Active Mixer Circuits .....	604
17.5.1	Active Single Balanced Mixer Using BJT .....	604
17.5.2	Active Double Balanced Mixer: The Gilbert Cell .....	608
17.5.3	Conversion Gain of the Gilbert Cell .....	612
17.5.4	The FET Gilbert Cell .....	614
17.6	Takeaways .....	615
	References .....	615
<b>APPENDIX A</b>	<b>Parameter Conversion Tables .....</b>	<b>617</b>
A.1	Two-Port Impittance Parameter Conversions .....	617
A.2	Two-Port S-Parameters to Impittance Parameter Conversions ..	618
A.3	Two-Port Impittance Parameter to S-Parameter Conversions ..	618
A.4	Two-Port T-Parameter and S-Parameter Conversions .....	619
<b>APPENDIX B</b>	<b>Physical Constants .....</b>	<b>621</b>
<b>APPENDIX C</b>	<b>Forbidden Regions for L-Sections .....</b>	<b>623</b>
C.1	Forbidden Regions for LC L-Sections .....	623
C.2	Forbidden Regions for LL and CC L-Sections .....	623
	Index .....	629
