## **Part 1 Alkylation and Polymerization**

|                                                                                                                         |          |
|-------------------------------------------------------------------------------------------------------------------------|----------|
| <b>Chapter 1.1. UOP AlkyPlus™ Alkylation Process</b><br><b>Kurt A. Detrick, Jeffrey M. Knight, and Ronald K. Subris</b> | <b>3</b> |
|-------------------------------------------------------------------------------------------------------------------------|----------|

|                                   |    |
|-----------------------------------|----|
| Introduction /                    | 3  |
| Process Chemistry /               | 4  |
| Process Description /             | 5  |
| Process Risk Management /         | 7  |
| Commercial Status and Economics / | 9  |
| Engineering Design /              | 9  |
| Bibliography /                    | 11 |

|                                                                                                                                                                                            |           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Chapter 1.2. CB&amp;I's CDAlky® Process for the Production of High-Octane Alkylate: Breaking the Cold-Temperature Barrier</b><br><b>Jackeline Medina-Bolívar and Michael A. Haworth</b> | <b>13</b> |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|

|                         |    |
|-------------------------|----|
| Introduction /          | 13 |
| Process Description /   | 14 |
| Process Chemistry /     | 15 |
| Wastes and Emissions /  | 16 |
| Commercial Experience / | 16 |

|                                                                                                                |           |
|----------------------------------------------------------------------------------------------------------------|-----------|
| <b>Chapter 1.3. BenzOUT™ Technology for Benzene Reduction in Gasoline</b><br><b>Erik Moy and Sean C. Smyth</b> | <b>19</b> |
|----------------------------------------------------------------------------------------------------------------|-----------|

|                              |    |
|------------------------------|----|
| Introduction /               | 19 |
| BenzOUT Background /         | 19 |
| Process Chemistry /          | 20 |
| Process Description /        | 22 |
| Process Perspective /        | 23 |
| BenzOUT Product Properties / | 23 |
| Utility Requirements /       | 24 |

|                        |    |
|------------------------|----|
| Wastes and Emissions / | 25 |
| Process Economics /    | 25 |
| Reference /            | 25 |

---

## **Chapter 1.4. UOP Catolene™ Process    *Zhihao Fei and Hosoo Lim*** **27**

|                                                                          |    |
|--------------------------------------------------------------------------|----|
| Introduction /                                                           | 27 |
| Oligomerization Chemistry and Catalyst /                                 | 28 |
| Catolene Process—UOP Oligomerization Technology<br>For FCC Integration / | 30 |
| References /                                                             | 33 |

## **Part 2    Base Aromatics Production Processes**

---

## **Chapter 2.1. Aromatics Complexes    *Patrick Whitchurch*** **37**

|                                   |    |
|-----------------------------------|----|
| Introduction /                    | 37 |
| Configurations /                  | 38 |
| Description of the Process Flow / | 40 |
| Feedstock Considerations /        | 42 |
| Case Study /                      | 43 |
| Commercial Experience /           | 44 |
| Bibliography /                    | 44 |

---

## **Chapter 2.2. UOP Sulfolane Process    *Aiguo Liu*** **45**

|                                   |    |
|-----------------------------------|----|
| Introduction /                    | 45 |
| Solvent Selection /               | 47 |
| Process Concept /                 | 48 |
| Description of the Process Flow / | 49 |
| Feedstock Considerations /        | 51 |
| Process Performance /             | 51 |
| Equipment Considerations /        | 52 |
| Case Study /                      | 53 |
| Commercial Experience /           | 53 |
| Bibliography /                    | 54 |

---

## **Chapter 2.3. Q-Max™ Process for Cumene Production** ***José L. Miramontes and Robert J. Schmidt*** **55**

|                                   |    |
|-----------------------------------|----|
| Introduction /                    | 55 |
| Process Chemistry /               | 56 |
| Description of the Process Flow / | 58 |
| Feedstock Considerations /        | 59 |
| Process Performance /             | 62 |
| Case Study /                      | 62 |
| Commercial Experience /           | 63 |
| Bibliography /                    | 63 |

**Chapter 2.4. UOP Cyclar Process** *Helin Cox* **65**

Introduction / 65  
 Process Chemistry / 66  
 Description of the Process Flow / 67  
 Feedstock Considerations / 68  
 Process Performance / 69  
 Economics / 69  
 Commercial Experience / 70  
 Bibliography / 71

**Chapter 2.5. UOP Isomar Process** *Veronica G. Deak* **73**

Introduction / 73  
 Process Chemistry / 74  
 Description of the Process Flow / 75  
 Feedstock Considerations / 76  
 Process Performance / 77  
 Equipment Considerations / 77  
 Case Study / 78  
 Commercial Experience / 78  
 Bibliography / 78

**Chapter 2.6. UOP Tatoray Process** *Feng Xu and Claudio Bertelli* **79**

Introduction / 79  
 Process Chemistry / 80  
 Description of the Process Flow / 83  
 Feedstock Considerations / 83  
 Process Performance / 84  
 Equipment Considerations / 85  
 Case Study / 86  
 Commercial Experience / 86  
 Conclusions / 86  
 References / 87

**Chapter 2.7. UOP Parex™ Process** *Linda Shi Cheng* **89**

Introduction / 89  
 Parex versus Crystallization / 89  
 Process Performance / 91  
 Feedstock Considerations / 92  
 Description of the Process Flow / 92  
 Equipment Considerations / 94  
 Case Study / 94  
 Commercial Experience / 95  
 Bibliography / 95

## Part 3 Catalytic Cracking

### Chapter 3.1. Deep Catalytic Cracking: A Commercially Well-Proven Process for Light Olefins *Dilip Dharia*

99

---

|                                      |     |
|--------------------------------------|-----|
| Introduction /                       | 99  |
| DCC Flow Scheme /                    | 100 |
| DCC Catalyst /                       | 101 |
| DCC Hardware /                       | 102 |
| DCC Process Operating Modes /        | 103 |
| DCC Feed and Product Yields /        | 103 |
| DCC Process Description /            | 104 |
| DCC Commercial Status /              | 106 |
| DCC Integration with Steam Cracker / | 107 |
| C <sub>4</sub> Processing Options /  | 110 |
| Commercial Project Examples /        | 110 |
| Conclusion /                         | 113 |
| Acknowledgments /                    | 113 |
| References /                         | 113 |

### Chapter 3.2. UOP Fluid Catalytic Cracking Process

*Charles L. Hemler, Lester F. Smith, Lev Davydov, and Zhihao Fei*

115

---

|                                        |     |
|----------------------------------------|-----|
| Introduction /                         | 115 |
| Development History /                  | 115 |
| Process Chemistry /                    | 118 |
| Thermodynamics of Catalytic Cracking / | 121 |
| Catalyst History /                     | 121 |
| Process Description /                  | 122 |
| Modern UOP FCC Unit /                  | 127 |
| Feedstock Variability /                | 133 |
| Process Costs /                        | 137 |
| Market Situation /                     | 138 |
| References /                           | 139 |

### Chapter 3.3. Resid FCC Process: From Heavy Feeds to Valuable Products

*Harvey McQuiston, Paul Marchant, and Nicolas Lambert*

141

---

|                                  |     |
|----------------------------------|-----|
| Introduction /                   | 141 |
| R2R Reactor/Regenerator System / | 142 |
| Two-Stage Regeneration /         | 151 |
| Technology Features /            | 153 |
| Conclusion /                     | 158 |

### Chapter 3.4. INDMAX FCC: High Propylene Fluid Catalytic Cracking Technology by CB&I's Lummus Technology Inc. and Indian Oil Corporation Ltd. *Rama Rao Marri and Debasis Bhattacharyya*

159

---

|                                  |     |
|----------------------------------|-----|
| Introduction /                   | 159 |
| INDMAX FCC Process Description / | 160 |
| References /                     | 168 |

## Part 4 Dehydrogenation

### **Chapter 4.1. UOP Oleflex Process for Light Olefin Production** **Wolfgang Spieker and Gregory J. Nedohin** 173

---

Introduction / 173  
 Process Description / 174  
 Process Chemistry and Contaminants / 176  
 Oleflex Process Configurations and Conditions / 177  
 Commercial Experience / 182

### **Chapter 4.2. UOP Pacol Dehydrogenation Process** **Stephen Sohn, Yuree Whang, and Richard Zhang** 183

---

Introduction / 183  
 Process Description / 184  
 Pacol Process Improvements / 186  
 Yield Structure / 189  
 Commercial Experience / 189  
 Process Economics / 189  
 Reference / 189

### **Chapter 4.3. Light Olefin/Diolefin Production via CB&I's** **CATOFIN®/CATADIENE® Processes Herminio Febres II and Dennis P. Maloney** 191

---

Introduction / 191  
 Process Chemistry / 192  
 Process Description / 193  
 Process Economics / 196  
 Feedstock Consumption / 197  
 Utility Consumption / 198  
 Product Quality and By-Products / 199  
 Catalyst and Chemicals / 200  
 Environmental Emissions / 200  
 Summary of Technology Features / 201  
 References / 201

### **Chapter 4.4. TPC/UOP OXO-D Process John Senetar, Christopher DiGiulio,** **Jeannie Blommel, Joseph Duff, Jillian Horn, Cliff Maat, and Michael Nutt** 203

---

Introduction / 203  
 Process Chemistry/Catalysts / 204  
 Feeds / 204  
 Process Flow / 205  
 Economics / 206  
 References / 207

## Part 5 Synthesis Gas and Hydrogen Production

### Chapter 5.1. Amec Foster Wheeler Hydrogen Production *Mitesh S. Joshi* 211

---

|                                        |     |
|----------------------------------------|-----|
| Introduction /                         | 211 |
| Uses of Hydrogen /                     | 211 |
| Hydrogen Production /                  | 212 |
| Integration into the Modern Refinery / | 227 |
| Heat Recovery /                        | 231 |
| Economics /                            | 233 |
| Utility Requirements /                 | 235 |
| References /                           | 235 |

### Chapter 5.2. Technip Hydrogen Production *Sanjiv Ratan and Koos Overwater* 237

---

|                                                              |     |
|--------------------------------------------------------------|-----|
| Introduction /                                               | 237 |
| Hydrogen Uses and Refinery Applications /                    | 237 |
| Refinery Hydrogen Growth and Plant Capacities /              | 239 |
| Hydrogen Management in Refineries /                          | 239 |
| "On-Purpose" Hydrogen Production /                           | 242 |
| Product Hydrogen Purity Considerations /                     | 244 |
| Process Description (Typical SMR-PSA Based Hydrogen Plant) / | 245 |
| Steam Reformer Technology and Design /                       | 249 |
| Reformer Configuration and Selection /                       | 252 |
| Export Steam Considerations /                                | 255 |
| Steam-Power Synergy /                                        | 257 |
| Environmental Considerations /                               | 258 |
| Catalyst Developments /                                      | 259 |
| Feedstock Flexibility /                                      | 260 |
| Energy Efficiency and Design Optimization /                  | 261 |
| Unit Cost of Hydrogen and Economics /                        | 263 |
| Revamping of Existing Hydrogen Plants /                      | 264 |
| Sale of Gas/Over-the-Fence Hydrogen Supply /                 | 266 |
| Carbon Dioxide Curtailment and Capture /                     | 267 |
| Hydrogen Plant Distinctive Needs and Preferences /           | 269 |
| Epilogue /                                                   | 270 |
| Abbreviations /                                              | 270 |

### Chapter 5.3. E-Gas™ Gasification *Chancelor Williams* 273

---

|                                                   |     |
|---------------------------------------------------|-----|
| Introduction /                                    | 273 |
| Gasification Market Drivers /                     | 274 |
| E-Gas Technology Development History /            | 274 |
| Process Description /                             | 275 |
| Process Chemistry /                               | 276 |
| Performance and Feed Characteristic Sensitivity / | 277 |
| Process Integration, Utilities, and Effluents /   | 278 |

## **Part 6 Hydrocracking**

### **Chapter 6.1. ISOCRACKING: Hydrocracking for Superior Fuels and Lubes Production** *Alan G. Bridge, Ujjal K. Mukherjee, and Marvin Greene* **283**

---

ISOCRACKING Chemistry / 283  
 The Importance of Hydrogen / 289  
 ISOCRACKING Configurations / 291  
 ISOCRACKING Catalysts / 299  
 Product Yields and Qualities / 302  
 Reactor Internals / 306  
 Investment and Operating Expenses / 306  
 Summary / 307  
 Bibliography / 307  
 References / 308

### **Chapter 6.2. UOP Unicracking™ Process for Hydrocracking** *Donald Ackelson and Rebecca Wroblewski* **309**

---

Introduction / 309  
 Process Applications / 310  
 Process Description / 310  
 Investment and Operating Expenses / 317  
 Acknowledgment / 317

### **Chapter 6.3. Chevron Lummus Global Ebullated-Bed Bottom-of-the-Barrel Hydroconversion (LC-FINING™) Process** *Ujjal K. Mukherjee and Marvin Greene* **319**

---

Introduction / 319  
 Process Chemistry / 320  
 LC-FINING Reactor System / 322  
 LC-FINING Innovations / 324  
 Commercial Operations / 328  
 Catalysts / 332  
 LC-MAX / 333  
 Hybrid Slurry / 335  
 LC-SLURRY / 335  
 Investment Costs / 338  
 References / 339

### **Chapter 6.4. UOP Uniflex** *Grant Yokomizo and Brian Ganyu* **341**

---

History / 341  
 Uniflex Process Flow Scheme / 341  
 Process Chemistry / 344  
 Yields / 344

## Part 7 Hydrotreating

### **Chapter 7.1. RDS/VRDS Hydrotreating: Transportation Fuels from the Bottom of the Barrel** *Christopher J. Dillon and David N. Brossard* **347**

Introduction / 347  
 History / 348  
 Process Description / 350  
 Process Chemistry / 352  
 Hydroprocessing / 352  
 VRDS Hydrotreating / 357  
 Feed Processing Capability / 359  
 Commercial Application / 360  
 Future / 362  
 References / 362

### **Chapter 7.2. Selective Hydrogenation Processes** *Vesna Havran-Mueller, Jeannie Blommel, and Gregory J. Nedohin* **365**

Introduction / 365  
 Process Description and Flow Scheme / 365  
 Process Chemistry and Contaminants / 369  
 Process Condition and Performance / 370  
 Process Economics / 370  
 Commercial Experience / 372  
 References / 373

### **Chapter 7.3. UOP RCD Unionfining Process** *Ping Sun* **375**

Introduction / 375  
 Process Application / 375  
 Process Description / 377  
 Process Chemistry / 379  
 Catalyst / 383  
 RCD Commercial Experience / 384  
 Product Quality, Process Economics / 385  
 References / 385

### **Chapter 7.4. Production of Superior Lubricant Base Oil Utilizing ISODEWAXING and ISOFINISHING** *Subhasis Bhattacharya* **387**

Introduction / 387  
 History / 388  
 Key Physical and Chemical Properties of Base Oil / 389  
 Process Description / 391  
 Reaction Chemistry, Thermodynamics, and Catalysts / 397  
 Process Variables / 399  
 Commercial Application / 400  
 The Future / 402  
 Acknowledgment / 402  
 References / 403

---

**Chapter 7.5. Process Intensification via CB&I's CDHydro® Technologies** **405**  
**Maarten J. Almering and Michael A. Haworth**

---

Background / 405  
 The Benzene CDHydro Process / 406  
 Alternate Process Configurations for Benzene CDHydro / 407  
 Options for Benzene Saturation in Combination with Isomerization / 410  
 Conventional Processing Comparison / 411  
 Conclusions / 411  
 Reference / 412

---

**Chapter 7.6. UOP Hydrotreating Technology** **413**  
**Eseoghene Jeroro and Steven Zink**

---

Introduction / 413  
 Process Chemistry / 413  
 Catalyst / 418  
 Process Flow / 419  
 Hydrotreating Process Applications / 419  
 Investment / 422  
 UOP Hydroprocessing Experience / 422  
 Bibliography / 423

---

**Chapter 7.7. UOP Unisar™ Process for Saturation of Aromatics** **425**  
**H. W. Goudy and Eseoghene Jeroro**

---

Introduction / 425  
 Application to Diesel Fuels / 425  
 Process Description / 427  
 Process Applications / 431

**Part 8 Isomerization**

---

**Chapter 8.1. UOP BenSat™ Process** **Mark P. Lapinski and Dana K. Sullivan** **435**

---

Benzene Regulations and Sources / 435  
 Benzene Management / 436  
 BenSat Process / 437  
 Process Flow / 437

| Introduction /                                      | 453 |
| Process Description and Flow Schemes /              | 454 |
| Process Chemistry, Contaminants, and Deactivation / | 456 |
| Process Conditions and Performance /                | 458 |
| Commercial Status /                                 | 459 |

## **Part 9 Separation Processes**

---

**Chapter 9.1. Onstream Catalyst Replacement (OCR) and Upflow Reactor (UFR) Technologies for Fixed-Bed Residuum Hydrotreating** *Christopher J. Dillon*

---

**463**

|                                                      |     |
|------------------------------------------------------|-----|
| Introduction /                                       | 463 |
| Onstream Catalyst Replacement Development /          | 463 |
| Process Description /                                | 464 |
| Commercial Operation /                               | 467 |
| Onstream Catalyst Replacement Applications /         | 468 |
| Economic Benefits of Onstream Catalyst Replacement / | 471 |
| Upflow Reactor /                                     | 472 |

---

**Chapter 9.2. UOP/Amec Foster Wheeler Solvent Deasphalting Process** *Joseph Woodson, Jagannathan Govindhakannan, and Mark VanWees*

---

**475**

|                              |     |
|------------------------------|-----|
| Introduction /               | 475 |
| Process Description /        | 475 |
| Typical Feedstocks /         | 478 |
| Product Yields and Quality / | 478 |
| Process Variables /          | 482 |
| Extraction Systems /         | 484 |
| Pilot Plant Testing /        | 485 |
| DAO Processing /             | 485 |
| Pitch Properties and Uses /  | 487 |

|                                           |     |
|-------------------------------------------|-----|
| Resin Properties and Uses /               | 488 |
| Unlocking the Potential of SDA /          | 488 |
| Integration of SDA in Modern Refineries / | 492 |
| Process Economics /                       | 494 |
| References /                              | 495 |

---

### **Chapter 9.3. MaxEne™ Process** *Gregory Funk, Ernest Bohm, and Stephen Sohn* **497**

---

|                                 |     |
|---------------------------------|-----|
| Introduction /                  | 497 |
| Application /                   | 497 |
| MaxEne Process Configurations / | 498 |
| Case Study /                    | 498 |
| Process Performance /           | 499 |
| Commercial Experience /         | 499 |

## **Part 10 Sulfur Compound Extraction and Sweetening**

---

### **Chapter 10.1. UOP Merox Process** *J. A. Tertel* **503**

---

|                              |     |
|------------------------------|-----|
| Introduction /               | 503 |
| Process Description /        | 503 |
| Process Chemistry /          | 509 |
| Product Specifications /     | 511 |
| Process Economics /          | 511 |
| Process Status and Outlook / | 512 |

---

### **Chapter 10.2. S Zorb™ Sulfur Removal Technology for Gasoline** *Paul F. Meier, Huang Zechuan, Wu Defei, and Yuan Zhongxun* **513**

---

|                                                 |     |
|-------------------------------------------------|-----|
| Introduction /                                  | 513 |
| Technology Development /                        | 514 |
| Chemistry /                                     | 517 |
| Process /                                       | 519 |
| Process Economics and Operational Flexibility / | 522 |
| Conclusion /                                    | 523 |
| References /                                    | 524 |

---

### **Chapter 10.3. CB&I's CDHydro®/CDHDS® Process for Selectively Desulfurizing FCC Gasoline** *Luis Simoes, Arvids Judzis, Jr., and Michael A. Haworth* **525**

---

|                                                           |     |
|-----------------------------------------------------------|-----|
| Background Theory /                                       | 526 |
| Conventional Fixed-Bed Vapor-Phase Hydrodesulfurization / | 527 |
| Process Chemistry /                                       | 531 |
| Summary of CDHydro/CDHDS Technology Advantages /          | 534 |
| Reference /                                               | 536 |

**Chapter 10.4. Amec Foster Wheeler Amine Regeneration,  
Sour Water Stripping, Sulfur Recovery, and Tail Gas Treating**  
*Anthony Coulam, Scott Kafesjian, and Nick Watts*

537

---

|                                       |     |
|---------------------------------------|-----|
| Process Description /                 | 538 |
| Feedstocks /                          | 546 |
| Chemistry /                           | 547 |
| Products and Uses /                   | 550 |
| Operating Variables /                 | 551 |
| Specialty and Proprietary Equipment / | 552 |
| Catalysts /                           | 553 |
| Heat Loss /                           | 553 |
| Utilities and Heat Recovery /         | 553 |
| Revamps /                             | 554 |
| Economics /                           | 554 |
| Abbreviations /                       | 556 |

**Chapter 10.5. UOP Gasoline Desulfurization** *Eseoghene Jeroro  
and Steven Zink*

557

---

|                                              |     |
|----------------------------------------------|-----|
| Introduction /                               | 557 |
| Reducing the Sulfur Content of FCC Naphtha / | 558 |
| UOP Gasoline Desulfurization Technologies /  | 560 |
| Bibliography /                               | 563 |

**Part 11 Visbreaking and Coking**

**Chapter 11.1. Amec Foster Wheeler/UOP Visbreaking Process**  
*Scott A. Seiger and Randi S. Lesser*

567

---

|                                 |     |
|---------------------------------|-----|
| Introduction /                  | 567 |
| Coil versus Soaker Design /     | 568 |
| Feedstocks /                    | 568 |
| Yields and Product Properties / | 570 |
| Operating Variables /           | 572 |
| Process Flow Schemes /          | 572 |
| Reaction Product Quenching /    | 578 |
| Heater Design Considerations /  | 580 |
| Typical Utility Requirements /  | 581 |
| Estimated Investment Cost /     | 581 |
| Bibliography /                  | 582 |

**Chapter 11.2. SYDEC<sup>SM</sup> Delayed Coking Process** *Srini Srivatsan  
and Joseph Woodson*

583

---

|                                 |     |
|---------------------------------|-----|
| Process Description /           | 584 |
| Feedstocks /                    | 593 |
| Yields and Product Properties / | 596 |
| Key Operating Parameters /      | 598 |
| Coker Heaters /                 | 600 |
| Hydraulic Decoking /            | 604 |

|                                                      |     |
|------------------------------------------------------|-----|
| Coke-Handling and Dewatering Systems /               | 608 |
| Types and Uses of Petroleum Coke /                   | 610 |
| Integration of Delayed Coking in Modern Refineries / | 614 |
| Typical Utility Requirements /                       | 621 |
| Estimated Investment Cost /                          | 622 |
| References /                                         | 623 |

### **Chapter 11.3. Chevron Lummus Global's Advanced Coking Technology for Modern Refineries** *Al A. Faegh and Virendra Manral*

**625**

|                                             |     |
|---------------------------------------------|-----|
| Introduction /                              | 626 |
| CLG Advanced Coking Technology Background / | 626 |
| General Process Description /               | 626 |
| Feedstock Definition /                      | 627 |
| Product Yield /                             | 629 |
| Process Chemistry and Thermodynamics /      | 632 |
| Detailed Process Description /              | 633 |
| Products and By-Products Specifications /   | 641 |
| Wastes and Emissions /                      | 644 |
| Process Economics /                         | 647 |
| References /                                | 649 |

## **Part 12 Catalytic Reforming**

### **Chapter 12.1. UOP CCR Platforming** *Mark P. Lapinski, M. J. Wier, Laura E. Leonard, and Ka Lok*

**653**

|                                    |     |
|------------------------------------|-----|
| Introduction /                     | 653 |
| History /                          | 653 |
| Feedstocks /                       | 654 |
| Reformate Properties /             | 657 |
| Market Segmentation /              | 659 |
| Reforming Reactions /              | 662 |
| Reforming Catalysts /              | 664 |
| Deactivation and Regeneration /    | 667 |
| Reforming Process Conditions /     | 669 |
| Process Flow Schemes /             | 670 |
| Process Comparison and Economics / | 673 |
| References /                       | 675 |

## **Part 13 Oxygenates Production Technologies**

### **Chapter 13.1. CB&I's CDMtbe®/CDEtbe®/CDTame® Processes for the Production of High-Quality Ethers and Bio-Ethers** *Rosette Hizon-Barias and Jackeline Medina-Bolívar*

**679**

|                       |     |
|-----------------------|-----|
| Introduction /        | 679 |
| Process Description / | 679 |
| Process Chemistry /   | 680 |

|                         |     |
|-------------------------|-----|
| Process Flow /          | 681 |
| Product Specification / | 682 |
| Commercial Experience / | 683 |

## Part 14 Olefins from Methanol

### Chapter 14.1. CB&I's Methanol to Olefins Recovery and Olefin Interconversion *Carmen A. Fornarotto and Dennis P. Maloney* 689

---

|                                      |     |
|--------------------------------------|-----|
| Introduction /                       | 689 |
| Development and Commercial History / | 689 |
| Process Chemistry /                  | 691 |
| Process Description /                | 692 |
| Process Economics /                  | 695 |
| Summary of Process Features /        | 697 |
| References /                         | 698 |

### Chapter 14.2. Advanced Methanol-to-Olefins Process *John Senetar and Geoffrey Fichtl* 699

---

|                            |     |
|----------------------------|-----|
| Introduction /             | 699 |
| Process Description /      | 700 |
| MTO Catalyst /             | 702 |
| Olefin Cracking Catalyst / | 703 |
| Conclusions /              | 706 |
| References /               | 708 |

## Part 15 Hydrogen Processing

### Chapter 15.1. Hydrogen Processing Historical Perspective *Alan G. Bridge and Gary L. Hamilton* 711

---

|                        |     |
|------------------------|-----|
| Introduction /         | 711 |
| Process Fundamentals / | 720 |
| Process Design /       | 739 |
| Process Capabilities / | 748 |
| Acknowledgments /      | 766 |
| References /           | 766 |
