Preface	xi
---------------	----

CHAPTER 1 Reactor Configurations and Design Parameters for Thermochemical Conversion of Biomass into Fuels, Energy, and Chemicals 1

1 Biofuels – Basic Definitions	2
2 Thermochemical Technologies	5
3 Reactor Configurations for Fast Pyrolysis	8
3.1 Bubbling Fluidized-Bed Reactor.....	8
3.2 Circulating Fluidized-Bed Reactor.....	9
3.3 Auger Reactor.....	10
3.4 Vacuum Reactor	11
3.5 Ablative Reactors	12
3.6 Selection of Pyrolysis Systems	13
4 Gasification – Important Concepts and Definitions	14
5 Gasification Steps	17
6 Applications for the Gasification Product.....	19
7 Reactors for Gasification.....	20
7.1 Impurities in the Gas	23
8 Summary	23
Further Reading.....	23

CHAPTER 2 Bioreactor Design for Algal Growth as a Sustainable Energy Source 27

1 Introduction.....	27
2 Bioreactor Design	29
3 Algal Growth in Bioreactors	30
3.1 Open Pond Systems	31
3.2 Photobioreactors	33
3.3 Comparison	40
4 Modeling of Algal Growth.....	42
4.1 Theoretical Maximum Production of Biodiesel from Algae.....	42
4.2 Modeling Algae Growth in an Open Raceway.....	44
4.3 Modeling Algal Growth in a PBR	48

4.4 Combining Algal Growth with CO ₂ Fixation.....	54
5 Conclusions.....	57
Acknowledgment	58
References	58
 CHAPTER 3 Design of Flow Battery.....	 61
1 Overview of Redox Flow Battery	62
1.1 Introduction.....	62
1.2 The Characteristics of the RFB.....	63
1.3 Evaluation of the RFB.....	65
1.4 Types of Redox Flow Batteries.....	66
2 True Redox Flow Batteries	67
2.1 Bromine/Polysulphide RFB.....	67
2.2 Vanadium Redox Flow Batteries	69
2.3 Other Types of Typical Redox Flow Batteries.....	74
3 Hybrid Redox Flow Batteries.....	77
3.1 Zinc-Bromine RFB	77
3.2 Other Hybrid RFB Systems Based on the Zn ²⁺ /Zn Redox Couple	80
3.3 Undivided Membrane-Free Redox Flow Batteries	81
3.4 Semisolid Lithium Rechargeable Flow Battery	84
4 Design Considerations of Redox Flow Batteries	85
4.1 The Configuration of Redox Flow Batteries	85
4.2 Electrode Research	88
4.3 Membrane and Separator.....	90
4.4 Modelling of the RFB	91
5 Summary and Perspectives.....	92
References	93
 CHAPTER 4 Design and Optimization Principles of Biogas Reactors in Large Scale Applications.....	 99
1 Introduction.....	100
2 Simple Structured Biogas Reactors.....	100
2.1 Fixed Dome Digesters	101
2.2 Floating Drum Digesters	102
2.3 Improvement of Simple Structured Biogas Reactors	102
3 Enhanced Bioreactors for Large-Scale Applications	103
3.1 Energy Transfer	103
3.2 Stirring and Mixing in Biogas Reactors	116
4 Research Progress in Lab	125
4.1 Immobilization.....	125

4.2 In-Situ Methane Enrichment	127
4.3 Reaction Pathway Control.....	127
5 Conclusion	129
Acknowledgments	130
References	130

CHAPTER 5 Pd-Alloy Membranes for Hydrogen Separation 135

1 Background.....	136
1.1 Hydrogen Separation in Advanced Coal Conversion Processes	136
1.2 Options for Hydrogen Separation	136
2 The Chemistry and Physics of Separation by Dense Metal Membranes.....	137
2.1 The Solution-Diffusion Mechanism.....	137
2.2 Definition of Selectivity	138
2.3 Experimental Characterization of Permeability	139
2.4 First-Principles Calculation of Permeability	141
3 The Permeability of Single-Component Materials	141
3.1 Pd Membranes	142
4 The Roles of Minor Alloy Component(s).....	145
4.1 Structure and Mechanical Properties	145
4.2 Permeability	146
4.3 Control of Response to Minor Components	148
4.4 Ternary Pd Alloys.....	152
5 Design and Implementation of Dense Metal Membrane Systems.....	153
5.1 Strategies for Preparing and Stabilizing Thin Metal Layers.....	153
5.2 Device (Module) Design	154
5.3 Integrated Reactor Designs: Membrane Reactors.....	155
5.4 Process Optimization/Configuration	156
6 Outlook	156
References	158

CHAPTER 6 Processes and Simulations for Solvent-Based CO₂ Capture and Syngas Cleanup 163

1 Introduction.....	164
2 Methyldiethanolamine	166
2.1 Overview.....	166
2.2 Tutorial: Example of Using MDEA for H ₂ S Removal in ProMax	168

2.3	Tutorial: Example of Using MDEA for CO ₂ Removal in Aspen Plus with the Electrolyte-NRTL Package	175
2.4	MDEA for Simultaneous H ₂ S and CO ₂ Removal	189
3	Piperazine.....	190
3.1	The Influence of Pressure.....	191
3.2	Modelling Piperazine in Aspen Plus.....	192
3.3	Modelling Piperazine in Aspen HYSYS.....	192
3.4	Modelling Piperazine in ProMax	192
4	Monoethanolamine	193
4.1	Simulating MEA CO ₂ Capture Systems in Aspen Plus Using the Amines Package.....	194
4.2	Advanced Simulation Techniques.....	198
4.3	MEA for CO ₂ Capture from Pulverized Coal Power Plants	199
4.4	MEA for H ₂ S Removal	199
4.5	MEA for CO ₂ Capture for Hydrogen Generation Applications	200
4.6	Other Software.....	201
5	DGA, Morpholine, and Other Amines.....	201
5.1	Simulating CO ₂ Capture with DGA.....	202
5.2	Other Amines.....	204
6	Selexol.....	204
6.1	Tutorial: Example of Modelling CO ₂ Capture Using Aspen HYSYS	206
6.2	Modelling Selexol Processes with the PC-SAFT Package (HYSYS, Aspen Plus).....	215
7	Rectisol	217
7.1	Tutorial: Example Rectisol Process for CO ₂ and H ₂ S Removal Using Invensys Pro/II.....	218
7.2	Example Rectisol Process for CO ₂ Removal Only in Aspen HYSYS	226
7.3	Notes for Modelling in Aspen Plus.....	226
8	Conclusions	226
	References	229
CHAPTER 7	Chemical-Looping Processes for Fuel-Flexible Combustion and Fuel Production	233
1	Introduction.....	233
2	Fuel Composition and Fuel Flexibility	236
2.1	Fuel Contaminants.....	236

2.2 Fuel Flexibility	240
2.3 Chemical-Looping Oxygen Uncoupling	247
3 Chemical-Looping Reforming	252
3.1 Chemical-Looping Steam Reforming	255
3.2 Chemical-Looping Dry Reforming	259
3.3 Chemical-Looping Mixed Reforming	261
3.4 Chemical-Looping Partial Oxidation	263
4 Summary and Outlook	271
Acknowledgment	273
References	273
 Index	 281
