

TABLE OF CONTENTS

<i>List of Figures</i>	ix
<i>List of Tables</i>	xiii
<i>Preface</i>	xv
1. Purpose of Creative Design Engineering	1
1.1 Science and technology, products, and society	1
1.2 Perspectives on design: Analytical and synthetic methods	3
1.3 The main questions: Why do we design and why are we able to design?	6
1.4 The design cycle model: Pre-design phase, design phase, and post-design phase	8
1.5 Requisite knowledge	9
1.6 Structure of this book	10
<i>Task: What do we need to learn in order to be able to design outstanding things?</i>	11
References	11
PART 1 MOTIVE OF DESIGN AND THE DESIGN CYCLE MODEL	
2. Motive of Design and the Design Cycle Model	15
2.1 Social motive and personal motive	15
2.2 Outer motive and inner motive	17
2.3 The design cycle model and missing links	18
2.4 Continuous and non-continuous design cycles	22
<i>Task: Why do we continue to make cars?</i>	25
References	25
3. Aspects of Motive of Design: One Form of Inner and Outer Motive	27
3.1 One form of inner motive: Complex networks of expanding associations	27
3.2 One form of outer motive: Latent functions and latent fields	33
<i>Task: Think of a new usage of clothes pegs that differs from the norm and generate a concept of a product that need not be a type of clothes peg.</i>	38
References	38

PART 2 THEORY AND METHODOLOGY OF CONCEPT GENERATION

4. The Metaphor Method: Theory and Methodology of Concept Generation (First Method)	43
4.1 Theoretical framework of concept generation using metaphors	43
4.2 Methodology of concept generation using property mapping	48
4.3 The practice of design using property mapping	49
4.4 Multiple loops of design using metaphors	54
<i>Task: Think of a man-made object like a living thing.</i>	55
References	55
5. The Blending Method: Theory and Methodology of Concept Generation (Second Method)	57
5.1 Concept generation using blending	57
5.2 Theoretical framework of concept generation using blending	59
5.3 Alignable difference and nonalignable difference	65
5.4 The practice of concept generation using blending	67
<i>Task: Think of a new concept of product by blending the two concepts of 'firefly' and 'rice'.</i>	69
References	69
6. Using Thematic Relations: Theory and Methodology of Concept Generation (Third Method)	71
6.1 Taxonomic and thematic relations	71
6.2 The role of thematic relations in design	72
6.3 Methodology and practice of design using thematic relations	73
6.4 Function design using thematic relations	77
<i>Task: Think of a situation that involves the three keywords 'skyscraper,' 'banana,' and 'pencil'.</i>	78
References	78
7. Abduction and Concept Generation	79
7.1 Deduction, induction, and abduction	79
7.2 Abduction and design	81
7.3 The relationship between abduction and metaphor	86
<i>Task: Verify that when we try to generate new knowledge, there is the possibility that odd knowledge is generated.</i>	87
References	87

8. Basic Principles of Concept Generation	89
8.1 The validity of categorizing concept generation methods into three types	89
8.2 First-order concept generation and high-order concept generation	92
8.3 The significance of performing high-order concept generation	95
8.4 Divergent thinking in creative design	96
8.5 Analytical concept generation and synthetic concept generation	102
<i>Task: Can we say that crows design?</i>	104
References	104

PART 3 THEORY AND METHODOLOGY OF CONCEPTUAL DESIGN

9. Methodology of Conceptual Design	107
9.1 An overview of design methodology	107
9.2 Function decomposition	111
9.3 Searching for solution principles	114
9.4 Firming up into concept variants by combining solution principles	116
9.5 Evaluating concept variants	116
<i>Task: Follow the steps and experience conceptual design.</i>	117
Reference	118

10. Basic Principles of Conceptual Design	119
10.1 Theoretical framework of conceptual design	119
10.2 Characteristics and methodology of function decomposition	120
10.3 Function decomposition matrix	127
10.4 Analytical function decomposition and synthetic function decomposition	128
<i>Task: Verify the importance of function decomposition using a card shuffler as an example.</i>	129
References	129

PART 4 DESIGN CAPABILITY AND SOCIALITY

11. Competencies Required for Creative Design Thinking and Their Transfer	133
11.1 Competencies required for creative design thinking	133
11.2 Transferring the competencies required for creative design thinking	137
<i>Task: Will computers become able to design?</i>	144
References	144

12. From Product Design to Technology Design	145
12.1 The relationship between science and technology and design	145
12.2 Interactions of science and technology and its products with society	147
12.3 Analytical and synthetic acceptance	152
12.4 Design of technology	153
Task: Think about the relationship between science and technology and art and culture, using the example of a five-storied pagoda.	154
Reference	154
 13. The Meaning of Creative Design Engineering	 155
13.1 Why do we design?	155
13.2 Why are we able to design?	157
13.3 The meaning of design in engineering	158
Task: Why does it take less effort to communicate our experiences to our descendants 1000 years from now than to investigate vestiges from 1000 years ago?	165
Reference	165
 Epilogue	 167
Subject Index	173
