	Foreword	ix
	Series introduction	xi
	About this book	xiii
	About the contributors	xvii
	Acknowledgements	xxi
	Dedication	xxii
	Part I: Principles	1
01	Introduction	3
	<i>Richard Fenner and Charles Ainger</i>	
	1.1. Water – essential infrastructure	3
	1.2. Global water: from source to service	3
	1.3. Current unsustainable features of water infrastructure – and ‘technical lock-in’	8
	1.4. Changing approaches to water management	10
	1.5. Water management in cities of the future	14
	1.6. Resilience and adaptive management	15
	1.7. The way forward – developing good practice for sustainable water services	17
	References	18
02	Challenges and opportunities	21
	<i>Richard Fenner and Charles Ainger</i>	
	2.1. Introduction	21
	2.2. Cross-cutting themes and absolute principles	22
	2.3. New challenges for water management	23
	2.4. Scale and governance	29
	References	31
	Part II: Practice	33
03	Water resources	35
	<i>Trevor Bishop (with additional contributions by Ian Barker)</i>	
	3.1. Introduction	35
	3.2. Integrated planning for sustainable catchments	36
	3.3. Water-resource planning: principles, pressures and managing uncertainty	40
	3.4. Supply/demand planning: principles and approach	43
	3.5. Adaptive management and resilience – key sustainability actions	45
	What practitioners can do	48
	References	48

04	Water in the urban system	51
	<i>Richard Ashley</i>	
	4.1. Introduction	51
	4.2. We have always done it this way	54
	4.3. Planning with water for sustainability	60
	4.4. Getting there	62
	What practitioners can do	72
	References	72
	Further reading	75
05	Water in the rural system	77
	<i>Martin Ross</i>	
	5.1. Key challenges and opportunities	77
	5.2. Integrated catchment management – a more sustainable practice	78
	5.3. Sustainability benefits from integrated catchment management	83
	5.4. How to do it – working with stakeholders and regulators	88
	5.5. Data, analysis and modelling	89
	5.6. Collaborative working	89
	5.7. International experience and practice	90
	What practitioners can do	91
	References	91
06	Water demand and supply	93
	<i>Richard Burns</i>	
	6.1. The water supply–demand balance	93
	6.2. Avoiding unnecessary use of potable water	96
	6.3. Using alternative water sources of supply	97
	6.4. Reducing losses from the water system	102
	6.5. Water-demand management	109
	6.6. A water company response	115
	6.7. Resilience	117
	What practitioners can do	118
	References	118
07	Wastewater management	123
	<i>Adrian Johnson</i>	
	7.1. Introduction	123
	7.2. What does sustainable wastewater management look like?	126
	7.3. How do we achieve sustainable wastewater management?	138
	What practitioners can do	144
	References	144
	Further reading	146

08	<p>Drainage and flood resilience 147</p> <p><i>David Balmforth</i></p> <p>8.1. Introduction 147</p> <p>8.2. Unsustainable drainage 148</p> <p>8.3. A new paradigm for urban drainage 149</p> <p>8.4. The role of standards in sustainable drainage development 151</p> <p>8.5. Achieving sustainable drainage 154</p> <p>8.6. Be clear on the desired outcomes from developing the drainage system 158</p> <p>8.7. Understand the performance of the existing drainage system 159</p> <p>8.8. Apply the solutions matrix: challenge convention 160</p> <p>8.9. Recognise that the developed system will have a finite capacity: plan for exceedance 163</p> <p>8.10. Build resilience against flooding and other impacts 165</p> <p>8.11. Manage other receptor impacts 169</p> <p>8.12. Achieving multiple benefits 170</p> <p>What practitioners can do 171</p> <p>References 171</p>
09	<p>Innovating beyond operations – a water company example 173</p> <p><i>Steve Kaye, Charles Ainger and Richard Fenner</i></p> <p>9.1. Innovating beyond ‘operations’ 173</p> <p>9.2. Drivers and strategies for company-wide innovation for sustainability 174</p> <p>9.3. Innovation through engagement with all stakeholders 178</p> <p>9.4. Tying it all together 190</p> <p>What practitioners can do 194</p> <p>References 195</p>
10	<p>Water in development 197</p> <p><i>Richard Carter</i></p> <p>10.1. Introduction 197</p> <p>10.2. Water (in)security in developing countries 199</p> <p>10.3. Developing countries are different 205</p> <p>10.4. What constitutes sustainable water development? 207</p> <p>10.5. Three case studies 211</p> <p>What practitioners can do 213</p> <p>References 214</p>

	Part III: Change	217
11	Drivers and barriers to innovation, and effective responses	219
	<i>Charles Ainger, Richard Fenner and Adrian Johnson</i>	
	11.1. Drivers for change and innovation	219
	11.2. Barriers to innovation	219
	11.3. The shape of change – driving up the innovation curve	222
	11.4. Responses – asking the right question at the right time	226
	11.5. Apply a robust methodology to identify, assess and select sustainable solutions	227
	11.6. Explore wider options and collaborative multifunctional solutions – enabling innovative thinking	231
	What practitioners can do	233
	References	233
12	Case studies – enablers for sustainability innovation	235
	<i>Charles Ainger and Richard Fenner</i>	
	12.1. Trends that enable better sustainability practice	235
	12.2. Regulation for innovation	235
	12.3. Measurement and targets for innovation – the example of CO ₂ e emissions	241
	12.4. ‘Big data’ analysis, and data modelling for innovation	245
	12.5. Innovation through procurement	248
	What practitioners can do – the sum is greater than the parts	254
	References	254
13	Ending thoughts – the journey to sustainable water	257
	<i>Charles Ainger and Richard Fenner</i>	
Appendix 1	Principles for sustainable infrastructure	261
Appendix 2	Sharing new practice for sustainable water	263
	Index	265
