

Detailed Contents

At a first reading of the book, some sections are optional in the sense that they are not necessary to understand the material that follows. An asterisk (*) indicates these sections.

Part A. Fundamentals, Strategies, and Design Options in Integral Logistics Management	1
1 Logistics, Operations, and Supply Chain Management.....	3
1.1 Basic Definitions, Issues, and Challenges.....	3
1.1.1 Products, Services, and the Product Life Cycle.....	4
1.1.2 Logistics and Operations Management, the Synchronization between Supply and Demand, and the Role of Inventories	6
1.1.3 The Supply Chain, Supply Chain Management, and Integral Logistics Management.....	10
1.1.4 The Role of Planning and Control and the SCOR Model	12
1.2 Business Objects	15
1.2.1 Business-Partner, and Order-Related Business Objects	15
1.2.2 Product-Related Objects	18
1.2.3 Process-Related Business Objects	21
1.2.4 Resource-Related Business Objects	23
1.2.5 Rough-Cut Business Objects	26
1.3 Strategies in the Entrepreneurial Context	29
1.3.1 Entrepreneurial Objectives in a Company and in a Supply Chain	30
1.3.2 Resolving Conflicting Entrepreneurial Objectives.....	31
1.3.3 Customer Order Penetration Point (OPP) and Coordination with Product and Process Design.....	35
1.3.4 Target Area Flexibility: Investments in Enabling Organizations, Processes, and Basic Technologies.....	37
1.3.5 Enabling Technologies Toward Personalized Production.....	40
1.4 Performance Measurement	42
1.4.1 The Basics of the Measurement, Meaning, and Practical Applicability of Logistics Performance Indicators.....	43
1.4.2 Performance Indicators in the Target Area of Quality	44
1.4.3 Performance Indicators in the Target Area of Costs	44
1.4.4 Performance Indicators in the Target Area of Delivery	46
1.4.5 Performance Indicators in the Target Area of Flexibility.....	48
1.4.6 Performance Indicators of the Primary Entrepreneurial Objective	50
1.5 Summary	51
1.6 Keywords	51
1.7 Scenarios and Exercises	52
1.7.1 Improvements in Meeting Entrepreneurial Objectives.....	52
1.7.2 Entrepreneurial Objectives and ROI.....	53
1.7.3 Assessing the Economic Value Added (EVA) of Supply Chain Initiatives	54
1.7.4 Rough-Cut Business Objects	57
1.8 References	59
2 Supply Chain Design: Business Relations and Risks	61

2.1	Ownership and Trade in a Supply Chain	61
2.1.1	The Make-or-Buy Decision — Transaction Costs as the Basis of Forming Companies ..	62
2.1.2	Global Trading — Value Content Requirements and Tariff-Oriented in a Supply Chain.....	66
2.1.3	Total Cost of Ownership in a Global Supply Chain.....	69
2.2	Strategic Procurement	72
2.2.1	Overview on Strategic Procurement.....	73
2.2.2	Traditional Market-Oriented Relationship Compared with Customer-Supplier Partnership.....	75
2.2.3	Strategic Procurement Portfolios.....	78
2.2.4	Strategic Selection of Suppliers.....	80
2.2.5	Basics of Supplier Relationship Management and E-Procurement Solutions.....	83
2.3	Designing a Partnership Relationship	85
2.3.1	Target Area Strategies for Intensive Cooperation	85
2.3.2	The Advanced Logistics Partnership (ALP) Model, a Framework for Implementation of Intensive Cooperation in the Supply Chain	88
2.3.3	Top Management Level: Building Trust and Establishing Principal Relationships	89
2.3.4	Middle Management Level: Working Out Collaborative Processes in the Supply Chain ..	90
2.3.5	Operational Management Level: Collaborative Order Processing — Avoiding the Bullwhip Effect.....	93
2.3.6	Example Practical Application	95
2.3.7	The Virtual Enterprise and Other Forms of Coordination among Companies.....	97
2.4	Supply Chain Risk Management.....	100
2.4.1	Identification of Supply Chain Risks.....	102
2.4.2	Assessment of Supply Chain Risks	103
2.4.3	Handling Supply Chain Risks.....	106
2.5	Summary	107
2.6	Keywords	108
2.7	Scenarios and Exercises	108
2.7.1	Advanced Logistics Partnership (ALP).....	108
2.7.2	Evaluate Company Relationships in the Supply Chain	109
2.7.3	The Bullwhip Effect	112
2.8	References.....	113
3	Supply Chain Design: Location Planning and Sustainability	117
3.1	Design Options for Production, Distribution, and Service Networks	118
3.1.1	Design Options for Production Networks	118
3.1.2	Design Options for Distribution Networks.....	122
3.1.3	Network Structure for Decentralized Distribution, and Design Options for Retail Networks.....	127
3.1.4	Design Options for Service Networks	130
3.1.5	Design Options for Transportation Networks	135
3.2	Location Selection and Location Configuration	140
3.2.1	Location Selection Using Qualitative Methods.....	141
3.2.2	Location Selection and Location Configuration with Linear Programming	149
3.3	Sustainable Supply Chains.....	150
3.3.1	The Changing Concept of Sustainability with Reference to the Triple Bottom Line	151
3.3.2	Economic Opportunities for Social Commitment	154

3.3.3	Economic Opportunities for Environmental Commitment	155
3.3.4	Energy Management Concepts and Measures for Improved Environmental Performance.....	158
3.3.5	The Measurement of the Environmental Performance	161
3.4	Summary	162
3.5	Keywords	163
3.6	Scenarios and Exercises	163
3.6.1	Location Configuration with Linear Programming	163
3.7	References	167

Part B. Strategic and Tactical Concepts of Planning & Control in Integral Logistics Management 169

4	Business Process Analysis and Concepts for Planning & Control.....	171
4.1	Elements of Business Process Management	173
4.1.1	Basic Definitions of Work, Task, Function, and Process	173
4.1.2	Terms in Business Process Engineering.....	174
4.1.3	Order Management and Graphical Representation of Logistics Processes	176
4.2	Push and Pull in the Design of Business Processes	178
4.2.1	Pull Logistics	178
4.2.2	Push Logistics.....	180
4.2.3	The Temporal Synchronization between Use and Manufacturing with Inventory Control Processes.....	182
4.3	Important Techniques of Analysis in Business Process Engineering	183
4.3.1	Organization-Oriented Process Chart.....	184
4.3.2	Manufacturing and Service Processes in the Company-Internal and Transcorporate Layout	186
4.3.3	Detailed Analysis and Time Study of Processes	188
4.4	Characteristic Features Relevant to Planning & Control in Supply Chains....	190
4.4.1	Principle and Validity of Characteristics in Planning & Control.....	190
4.4.2	Six Features in Reference to Customer, and Item or Product or Product Family	191
4.4.3	Five Features in Reference to Logistics and Production Resources.....	196
4.4.4	Seven Features in Reference to the Production or Procurement Order	202
4.4.5	Important Relationships between Characteristic Features.....	206
4.4.6	Features of Transcorporate Logistics in Supply Chains	209
4.5	Branches, Production Types, and Concepts for Planning & Control.....	211
4.5.1	Branches of Industry in Dependency upon Characteristic Features	211
4.5.2	Production Types	213
4.5.3	Concepts for Planning & Control	215
4.5.4	Selecting an Appropriate Branch Model, Production Type, and Concept for Planning & Control	217
4.6	Summary	219
4.7	Keywords	220
4.8	Scenarios and Exercises	220
4.8.1	Concepts for Planning & Control within the Company	220
4.8.2	Synchronization between Use and Manufacturing with Inventory Control Processes....	221
4.8.3	Basic Process Analysis and Manufacturing Processes in the Company-Internal Layout	221

4.9	References	223
5	The MRP II / ERP Concept: Business Processes and Methods	225
5.1	Business Processes and Tasks in Planning & Control	225
5.1.1	The MRP II Concept and Its Planning Hierarchy	225
5.1.2	Part Processes and Tasks in Long-Term and Medium-Term Planning	227
5.1.3	Part Processes and Tasks in Short-Term Planning & Control	230
5.1.4	Reference Model of Processes and Tasks in Planning & Control	232
5.1.5	Beyond MRP II: DRP II, Integrated Resource Management, and the "Theory of Constraints"	235
5.2	Master Planning — Long-Term Planning	238
5.2.1	Demand Management: Bid and Customer Blanket Order Processing and Demand Forecasting	239
5.2.2	Sales and Operations Planning and Resource Requirements Planning	241
5.2.3	Master Scheduling and Rough-Cut Capacity Planning	245
5.2.4	Supplier Scheduling: Blanket Order Processing, Release, and Coordination	250
5.3	Introduction to Detailed Planning and Execution	252
5.3.1	Basic Principles of Materials Management Concepts	252
5.3.2	Overview of Materials Management Techniques	255
5.3.3	Basic Principles of Scheduling and Capacity Management Concepts	258
5.3.4	Overview of Scheduling and Capacity Management Techniques	261
5.3.5	Available-to-Promise and Capable-to-Promise	265
5.4	Logistics Business Methods in R&D (*)	267
5.4.1	Integrated Order Processing and Simultaneous Engineering	267
5.4.2	Release Control and Engineering Change Control	270
5.4.3	Different Views of the Business Object According to Task	272
5.5	Summary	274
5.6	Keywords	275
5.7	Scenarios and Exercises	275
5.7.1	Master Scheduling and Product Variants	275
5.7.2	Available-to-Promise (ATP)	276
5.7.3	Theory of Constraints	277
5.7.4	Master Planning Case	277
5.8	References	282
6	The Lean / Just-in-Time Concept and Repetitive Manufacturing	283
6.1	Characterizing Lean / Just-in-Time and Repetitive Manufacturing	284
6.1.1	Just-in-Time and Jidoka — Increasing Productivity through Reduction of Overburdening, Unevenness, and Useless Effort, or Waste	284
6.1.2	Characteristic Features for Simple and Effective Planning & Control Techniques of Repetitive Manufacturing	287
6.2	The Lean / Just-in-Time Concept	288
6.2.1	Lead Time Reduction through Setup Time Reduction and Batch Size Reduction	288
6.2.2	Further Concepts of Lead Time Reduction	291
6.2.3	Line Balancing — Harmonizing the Content of Work	296
6.2.4	Just-in-Time Logistics	298
6.2.5	Generally Valid Advantages of the Lean / Just-in-Time Concept for Materials Management	300

6.2.6	Generally Valid Advantages of the Lean / Just-in-Time Concept for Capacity Management	302
6.3	The Kanban Technique	302
6.3.1	Kanban: A Technique of Execution and Control of Operations	303
6.3.2	Kanban: A Technique of Materials Management.....	305
6.3.3	Kanban: Long- and Medium-Term Planning	308
6.4	The Cumulative Production Figures Principle.....	309
6.5	Implementing Procedure and Comparison of Techniques	311
6.5.1	Implementing Procedure.....	311
6.5.2	Comparison of Techniques: Kanban versus Order Point Technique (*).....	313
6.6	Summary	316
6.7	Keywords	317
6.8	Scenarios and Exercises	317
6.8.1	Operation Time versus Operation Cost, or the Effect of Varying Setup Time and Batch Size	317
6.8.2	The Effect of Cellular Manufacturing on Lead Time Reduction	318
6.8.3	Line Balancing — Harmonizing the Content of Work.....	319
6.8.4	Calculating the Number of Kanban Cards.....	321
6.9	References	322
7	The Concept for Product Families and One-of-a-Kind Production	323
7.1	Logistics Characteristics of a Product Variety Concept.....	323
7.1.1	High-Variety and Low-Variety Manufacturing.....	324
7.1.2	Different Variant-Oriented Techniques, and the Final Assembly Schedule	326
7.2	Adaptive Techniques.....	329
7.2.1	Techniques for Standard Products with Few Variants	329
7.2.2	Techniques for Product Families	333
7.3	Generative Techniques.....	335
7.3.1	The Combinatorial Aspect and the Problem of Redundant Data	335
7.3.2	Variants in Bills of Material and Routing Sheets: Production Rules of a Knowledge-Based System.....	337
7.3.3	The Use of Production Rules in Order Processing	339
7.4	Generative and Adaptive Techniques for Engineer-to-Order	341
7.4.1	Classical Procedure and Different Archetypes of Engineer-to-Order	341
7.4.2	Approach for Basic Engineer-to-Order	343
7.4.3	Approach for Repeatable Engineer-to-Order	344
7.5	Summary	346
7.6	Keywords	348
7.7	Scenarios and Exercises	348
7.7.1	Adaptive Techniques for Product Families	348
7.7.2	Generative Techniques — the Use of Production Rules in Order Processing	349
7.7.3	Generative Techniques — Setting the Parameters of a Product Family	349
7.8	References	350
8	The Concept for the Process Industry	351
8.1	Characteristics of the Process Industry	352

8.1.1	Divergent Product Structures and By-Products	352
8.1.2	High-Volume Line Production, Flow Resources, and Inflexible Facilities	356
8.1.3	Large Batches, Lot Traceability, and Loops in the Order Structure	358
8.2	Processor-Oriented Master and Order Data Management	359
8.2.1	Processes, Technology, and Resources	359
8.2.2	The Process Train: A Processor-Oriented Production Structure	361
8.2.3	Lot Control in Inventory Management	363
8.3	Processor-Oriented Resource Management	364
8.3.1	Campaign Planning	364
8.3.2	Processor-Dominated Scheduling versus Material-Dominated Scheduling	367
8.3.3	Consideration of a Nonlinear Usage Quantity and of a Product Structure with Loops	368
8.4	Special Features of Long-Term Planning	369
8.4.1	Determining the Degree of Detail of the Master Production Schedule	369
8.4.2	Pipeline Planning across Several Independent Locations	370
8.5	Summary	373
8.6	Keywords	374
8.7	Scenarios and Exercises	374
8.7.1	Batch Production versus Continuous Production	374
8.7.2	Manufacture of By-Products	375
8.7.3	Production Planning in Process Industries	376
8.8	References	377
9	ERP and SCM Software	379
9.1	Software in the Area of ERP and SCM: An Introduction	379
9.1.1	History and Origin of ERP Software	379
9.1.2	Scope and Range of ERP and SCM Software	381
9.2	Contents of ERP and SCM Software	383
9.2.1	Classical MRP II / ERP Software	383
9.2.2	Software for Customer Order Production or the Variant-Oriented Concept	384
9.2.3	Software for the Process Industry or the Processor-Oriented Concept	386
9.2.4	Software for Transcorporate Planning & Control in a Supply Chain	386
9.2.5	Software for Customer Relationship Management (CRM)	388
9.2.6	Standard or Company-Specific Software?	390
9.3	Factors for Successful Implementation of ERP and SCM Software	391
9.3.1	Possibilities and Limitations of the IT Support of Planning & Control	392
9.3.2	Factors That Influence Individual Acceptance and the Range of Implementation of ERP Software	396
9.4	Summary	399
9.5	Keywords	400
9.6	Scenarios and Exercises	400
9.6.1	Factors That Influence People's Acceptance of ERP Software	400
9.6.2	Standard or Company-Specific Software	401
9.6.3	Software for Transcorporate Planning & Control	401
9.7	References	402
	Part C. Methods of Planning & Control in Complex Logistics Systems	403

10	Demand Planning and Demand Forecasting	405
10.1	Overview of Demand Planning and Forecasting Techniques	406
10.1.1	The Problem of Demand Planning	406
10.1.2	Subdivision of Forecasting Techniques.....	408
10.1.3	Principles of Forecasting Techniques with Extrapolation of Time Series and the Definition of Variables	409
10.2	Historically Oriented Techniques for Constant Demand	413
10.2.1	Moving Average Forecast	414
10.2.2	First-Order Exponential Smoothing Forecast.....	416
10.2.3	Moving Average Forecast versus First-Order Exponential Smoothing Forecast.....	419
10.3	Historically Oriented Techniques with Trend-Shaped Behavior (*)	419
10.3.1	Regression Analysis Forecast.....	420
10.3.2	Second-Order Exponential Smoothing Forecast	421
10.3.3	Trigg and Leach Adaptive Smoothing Technique.....	424
10.3.4	Seasonality.....	426
10.4	Future-Oriented Techniques	428
10.4.1	Trend Extrapolation Forecast	428
10.4.2	Intuitive Forecasting Techniques.....	430
10.5	Using Forecasts in Planning.....	431
10.5.1	Comparison of Techniques and Choice of Suitable Forecasting Technique.....	431
10.5.2	Consumption Distributions and Their Limits, Continuous and Discontinuous Demand	432
10.5.3	Demand Forecasting of Variants of a Product Family	435
10.5.4	Safety Demand Calculation for Various Planning Periods	436
10.5.5	Translation of Forecast into Quasi-Deterministic Demand and Administration of the Production or Purchase Schedule	438
10.6	Summary	439
10.7	Keywords	440
10.8	Scenarios and Exercises	441
10.8.1	Choice of Appropriate Forecasting Techniques	441
10.8.2	Moving Average Forecasting Technique	442
10.8.3	First-Order Exponential Smoothing	442
10.8.4	Moving Average Forecast versus First-Order Exponential Smoothing Forecast.....	443
10.9	References.....	444
11	Inventory Management and Stochastic Materials Management	445
11.1	Stores and Inventory Management.....	446
11.1.1	Characteristic Features of Stores Management	446
11.1.2	Inventory Transactions	449
11.1.3	Physical Inventory and Inventory Valuation	451
11.2	Usage Statistics, Analyses, and Classifications	453
11.2.1	Statistics on Inventory Transactions, Sales, and Bid Activities	453
11.2.2	The ABC Classification and the Pareto Chart	455
11.2.3	The XYZ Classification and Other Analyses and Statistics	457
11.3	Order Point Technique and Safety Stock Calculation.....	458
11.3.1	The Order Point Technique	458
11.3.2	Variants of the Order Point Technique.....	460
11.3.3	Safety Stock Calculation with Continuous Demand	462

11.3.4	Determining the Service Level and the Relation of Service Level to Fill Rate (*).....	468
11.4	Batch or Lot Sizing	473
11.4.1	Production or Procurement Costs: Batch-Size-Dependent Unit Costs, Setup and Ordering Costs, and Carrying Cost.....	474
11.4.2	Optimum Batch Size and Optimum Length of Order Cycle: The Classic Economic Order Quantity.....	476
11.4.3	Optimum Batch Size and Optimum Length of Order Cycle in Practical Application ...	479
11.4.4	Extensions of the Batch Size Formula (*).....	482
11.5	Summary	485
11.6	Keywords	486
11.7	Scenarios and Exercises	486
11.7.1	The ABC Classification.....	486
11.7.2	Combined ABC-XYZ Classification.....	487
11.7.3	Safety Stock Variation versus Demand Variation.....	488
11.7.4	Batch Size Depending on Stockout Costs (*).....	489
11.7.5	Effectiveness of the Order Point Technique.....	490
11.8	References.....	490
12	Deterministic Materials Management.....	491
12.1	Demand and Available Inventory along the Time Axis.....	492
12.1.1	Projected Available Inventory.....	493
12.1.2	Projected Available Inventory Calculation.....	495
12.1.3	Scheduling and Cumulative Projected Available Inventory Calculation	497
12.1.4	Operating Curves for Stock on Hand	499
12.2	Deterministic Determination of Independent Demand	501
12.2.1	Customer Order and Distribution Requirements Planning (DRP)	501
12.2.2	Consuming the Forecast by Actual Demand (*)	503
12.3	Deterministic Determination of Dependent Demand.....	504
12.3.1	Characteristics of Discontinuous Dependent Demand	504
12.3.2	Material Requirements Planning (MRP) and Planned Orders.....	506
12.3.3	Determining the Timing of Dependent Demand and the Load of a Planned Order	510
12.4	Batch or Lot Sizing	512
12.4.1	Combining Net Requirements into Batches	512
12.4.2	Comparison of the Different Batch-Sizing Policies	515
12.5	Analyzing the Results of Material Requirements Planning (MRP)	517
12.5.1	Projected Available Inventory and Pegging	517
12.5.2	Action Messages.....	518
12.6	Summary	519
12.7	Keywords	521
12.8	Scenarios and Exercises	521
12.8.1	Projected Available Inventory Calculation.....	521
12.8.2	MRP Technique: Determining Net Requirements and Planned Release	522
12.8.3	Order Point Technique versus MRP Technique.....	523
12.9	References.....	524
13	Time Management and Scheduling	525

13.1	Elements of Time Management	526
13.1.1	The Order of the Operations of a Production Order	526
13.1.2	Operation Time and Operation Load	528
13.1.3	The Elements of Interoperation Time	529
13.1.4	Administrative Time	530
13.1.5	Transportation Time	531
13.2	Buffers and Queues	532
13.2.1	Wait Time, Buffers, and the Funnel Model	533
13.2.2	Queues as an Effect of Random Load Fluctuations	536
13.2.3	Conclusions for Job Shop Production	539
13.2.4	Logistic Operating Curves	540
13.3	Scheduling of Orders and Scheduling Algorithms	542
13.3.1	The Manufacturing Calendar	542
13.3.2	Calculating the Manufacturing Lead Time	543
13.3.3	Backward Scheduling and Forward Scheduling	545
13.3.4	Network Planning	548
13.3.5	Central Point Scheduling	551
13.3.6	The Lead-Time-Stretching Factor and Probable Scheduling	552
13.3.7	Scheduling Process Trains	556
13.4	Splitting, Overlapping, and Extended Scheduling Algorithms	556
13.4.1	Order or Lot Splitting	556
13.4.2	Overlapping	557
13.4.3	An Extended Formula for Manufacturing Lead Time (*)	558
13.4.4	Extended Scheduling Algorithms (*)	560
13.5	Summary	561
13.6	Keywords	563
13.7	Scenarios and Exercises	563
13.7.1	Queues as an Effect of Random Load Fluctuations (1)	563
13.7.2	Queues as an Effect of Random Load Fluctuations (2)	564
13.7.3	Network Planning	564
13.7.4	Backward Scheduling and Forward Scheduling	565
13.7.5	The Lead-Time-Stretching Factor and Probable Scheduling	567
13.8	References	568
14	Capacity Management	569
14.1	Fundamentals of Capacity Management	570
14.1.1	Capacity, Work Centers, and Capacity Determination	570
14.1.2	Overview of Capacity Management Techniques	573
14.2	Infinite Loading	574
14.2.1	Load Profile Calculation	575
14.2.2	Problems Associated with Algorithms for Load Profile Calculation	577
14.2.3	Methods of Balancing Capacity and Load	579
14.2.4	Order-Wise Infinite Loading	581
14.3	Finite Loading	582
14.3.1	Operations-Oriented Finite Loading	582
14.3.2	Order-Oriented Finite Loading	586
14.3.3	Constraint-Oriented Finite Loading	591
14.4	Rough-Cut Capacity Planning	592

14.4.1	Rough-Cut Network Plans and Load Profiles	593
14.4.2	Rough-Cut Infinite Loading	596
14.4.3	Rough-Cut Finite Loading.....	599
14.5	Summary	600
14.6	Keywords	602
14.7	Scenarios and Exercises	602
14.7.1	Capacity Determination.....	602
14.7.2	Algorithms for Load Profile Calculation.....	604
14.7.3	Rough-Cut Capacity Planning	605
14.8	References.....	608
15	Order Release and Control.....	609
15.1	Order Release	610
15.1.1	Order Proposals for Production and Procurement and Order Release	610
15.1.2	Load-Oriented Order Release (Loor)	613
15.1.3	Capacity-Oriented Materials Management (Corma).....	619
15.2	Shop Floor Control.....	625
15.2.1	Issuance of Accompanying Documents for Production	626
15.2.2	Operations Scheduling, Dispatching, and Finite Forward Scheduling.....	626
15.2.3	Sequencing Methods.....	630
15.3	Order Monitoring and Shop Floor Data Collection	631
15.3.1	Recording Issues of Goods from Stock	631
15.3.2	Recording Completed Operations	632
15.3.3	Progress Checking, Quality Control, and Report of Order Termination.....	632
15.3.4	Automatic and Rough-Cut Data Collection.....	634
15.4	Distribution Control	636
15.4.1	Order Picking.....	637
15.4.2	Packaging and Load Building.....	640
15.4.3	Transportation to Receiver	643
15.5	Summary	647
15.6	Keywords	648
15.7	Scenarios and Exercises	649
15.7.1	Load-Oriented Order Release (Loor)	649
15.7.2	Capacity-Oriented Materials Management (Corma)	650
15.7.3	Finite Forward Scheduling	651
15.7.4	Order Picking.....	652
15.8	References.....	653
16	Cost Estimating, Job-Order Costing, and Activity-Based Costing.....	655
16.1	Costs, Cost Elements, and Cost Structures	656
16.1.1	Actual, Direct, and Overhead Costs	656
16.1.2	Average Costs and Standard Costs.....	657
16.1.3	Variable Costs and Fixed Costs.....	658
16.1.4	Cost Accumulation Breakdown: The Cost Breakdown Structure of a Product	659
16.2	Cost Estimating.....	663
16.2.1	An Algorithm for Cost Estimation of Goods Manufactured.....	663

16.2.2	Representation of the Cost Accumulation and Comprehensive Calculation for a Product Line.....	665
16.3	Job-Order Costing	667
16.3.1	Actual Quantities and Actual Costs.....	667
16.3.2	Cost Analysis.....	668
16.3.3	The Interface from Order Management to Cost Accounting.....	669
16.4	Activity-Based Costing	670
16.4.1	Limits of Traditional Product Costing.....	670
16.4.2	Introducing Activity-Based Costing: Aim, Basic Premise, Requirements, and Technique.....	672
16.4.3	Typical Processes (Activities) and Process Variables.....	675
16.4.4	Activity-Based Product Cost Estimation.....	677
16.5	Summary.....	680
16.6	Keywords.....	681
16.7	Scenarios and Exercises.....	681
16.7.1	Job-Order Costing.....	681
16.7.2	Activity-Based Costing.....	683
16.7.3	Comparing Job-Order Costing and Activity-Based Costing.....	686
16.8	References.....	686
17	Representation and System Management of Logistic Objects	687
17.1	Order Data in Sales, Distribution, Production, and Procurement	688
17.1.1	Customers and Suppliers.....	688
17.1.2	The General Structure of Orders in Sales and Distribution, Production, and Procurement.....	689
17.1.3	The Order and Partial Order Header.....	691
17.1.4	The Order Position.....	692
17.1.5	Inventories and Inventory Transactions.....	694
17.2	The Master Data for Products and Processes	694
17.2.1	Product, Product Structure, Components, and Operations.....	694
17.2.2	Item Master.....	697
17.2.3	Bill of Material, Bill-of-Material Position, and Where-Used List.....	699
17.2.4	Work Center Master Data.....	706
17.2.5	The Work Center Hierarchy.....	707
17.2.6	Operation and Routing Sheet.....	709
17.2.7	Production Equipment, Bill of Production Equipment, and Bill of Tools.....	710
17.2.8	Composition of the Basic Master Data Objects.....	711
17.3	Extensions Arising from the Variant-Oriented Concept	713
17.3.1	Expert Systems and Knowledge-Based Systems.....	713
17.3.2	Implementation of Production Rules.....	715
17.3.3	A Data Model for Parameterized Representation of a Product Family (*).....	717
17.4	Extensions Arising from the Processor-Oriented Concept	718
17.4.1	Process, Technology, and the Processor-Oriented Production Structure.....	719
17.4.2	Objects for Lot Control.....	720
17.5	The Management of Product Data and Product Life Cycle Data	720
17.5.1	Product Life Cycle Management and Engineering Data Management.....	721
17.5.2	The Engineering Database as Part of a Computerized System.....	723
17.5.3	Data and Functional Model for General EDM Tasks.....	724

17.5.4	Object Classes and Functions for Release and Engineering Change Control (*)	725
17.6	Summary	726
17.7	Keywords	727
17.8	Scenarios and Exercises	727
17.8.1	Different Forms of Representing Bills of Material	727
17.8.2	Where-Used Lists	728
17.8.3	Basic Master Data Objects	728
