01	Introduction	1
	1.1. Geotechnical engineering	1
	1.2. Soils	2
	1.3. Rocks	9
	1.4. Foundations	16
	1.5. The role of engineers and concepts of geotechnical design	21
	Chapter summary	23
	Questions for practice	23
	References	24
	Further reading	25
02	Site investigation	27
	2.1. Introduction	27
	2.2. Methods and phases of site investigation	28
	2.3. Test pits, trenches and boreholes	30
	2.4. Sampling and laboratory tests	32
	2.5. Tests for in situ total unit weight and in situ water content	38
	2.6. Standard penetration test	40
	2.7. Static cone penetration test	44
	2.8. Dynamic cone penetration test	45
	2.9. Plate load test	45
	2.10. Field vane shear test	48
	2.11. Site investigation report	49
	Chapter summary	50
	Questions for practice	51
	References	51
	Further reading	53
03	Ground-improvement techniques	55
	3.1. Introduction	55
	3.2. Surface compaction	56
	3.3. Preloading	59
	3.4. Dewatering and electro-osmosis	64
	3.5. Dynamic compaction	66
	3.6. Explosion	68
	3.7. Vibro-compaction and vibro-replacement	69
	3.8. Heating and freezing	71
	3.9. Improvement with admixtures	72
	3.10. Grouting	74
	3.11. Soil-replacement technique	76
	3.12. Selection and evaluation of ground-improvement technique	76
	Chapter summary	77
	Questions for practice	77
	References	77
	Further reading	78

04	Shallow foundations	79
	4.1. Introduction	79
	4.2. Failure modes of foundation soil	80
	4.3. Bearing capacity equation	83
	4.4. Settlement of the foundation	95
	4.5. Contact stress and settlement profiles	105
	Chapter summary	108
	Questions for practice	109
	References	110
	Further reading	111
05	Deep foundations	113
	5.1. Introduction	113
	5.2. Piles and their types	113
	5.3. Ultimate load-carrying capacity of pile foundations	114
	5.4. Groups of piles	126
	5.5. Negative skin friction	129
	5.6. Pile load test	130
	5.7. Settlement analysis for pile foundations	131
	5.8. Allowable load-carrying capacity of pile foundations	134
	5.9. Well foundations	135
	Chapter summary	138
	Questions for practice	139
	References	141
	Further reading	142
06	Retaining structures	143
	6.1. Introduction	143
	6.2. Types of retaining structure	143
	6.3. Lateral earth pressures	144
	6.4. Sheet pile walls	160
	6.5. Design of retaining structures	163
	Chapter summary	165
	Questions for practice	166
	References	167
	Further reading	167
07	Slopes, embankments and earth dams	169
	7.1. Introduction	169
	7.2. Slope failure	169
	7.3. Factor of safety	172
	7.4. Stability of infinite slopes	173
	7.5. Stability of finite slopes	182
	7.6. Embankments	193
	7.7. Earth dams	193
	Chapter summary	196
	Questions for practice	196
	References	197
	Further reading	198

08	Machine foundations	199
	8.1. Introduction	200
	8.2. Soil dynamics and terminology	200
	8.3. Types of machine foundations	200
	8.4. Dynamic analysis of machine foundations	203
	8.5. General design requirements and design approach for machine foundations	214
	Chapter summary	219
	Questions for practice	219
	References	220
	Further reading	220
09	Geotechnical structures with reinforcement and confinement	221
	9.1. Introduction	221
	9.2. Basic description of geosynthetics	222
	9.3. Geotechnical structures with geosynthetic reinforcement	227
	9.4. Geotechnical structures with anchoring, bolting and nailing	234
	9.5. Geotechnical structures with confinement	235
	Chapter summary	237
	Questions for practice	237
	References	238
	Further reading	239
	Index	241
