

Contents

Chapter 1 Principles and Concepts of Green Chemistry	1
1.1 Introduction	1
1.2 Sustainable Development and Green Chemistry	3
1.3 Green Engineering	6
1.4 Atom Economy	7
1.4.1 Atom Economic Reactions	9
1.4.2 Atom Uneconomic Reactions	14
1.5 Reducing Toxicity	18
1.6 Measuring Toxicity	20
1.6.1 LD ₅₀ and LC ₅₀	20
1.6.2 Fixed-Dose Procedure	21
1.6.3 Ames Test	21
1.6.4 Alternatives to Animal Testing	22
Further Reading	23
Chapter 2 Waste: Production, Problems, and Prevention	24
2.1 Introduction	24
2.2 Some Problems Caused by Waste	26
2.3 Sources of Waste in the Chemical Industry	27
2.3.1 Quality by Design	32
2.4 The Cost of Waste	33
2.5 Waste-Minimisation Techniques	36
2.5.1 The Team Approach to Waste Minimisation	37
2.5.2 Process Design for Waste Minimisation	39
2.5.3 Minimising Waste from Existing Processes	42
2.6 On-site Waste Treatment	44
2.6.1 Physical Treatment	45

2.6.2	Chemical Treatment	47
2.6.3	Electrochemical Waste Treatment	49
2.6.4	Biotreatment Plants	51
2.7	Design for Degradation	53
2.7.1	Degradation and Surfactants	53
2.7.2	DDT	54
2.7.3	Polymers	55
2.7.4	Some Rules for Degradation	57
2.8	Polymer Recycling	58
2.8.1	Separation and Sorting	58
2.8.2	Incineration	61
2.8.3	Mechanical Recycling	62
2.8.4	Chemical Recycling to Monomers	63
	Further Reading	66
Chapter 3	Measuring and Controlling Environmental Performance	67
3.1	The Importance of Measurement	67
3.1.1	Lactic Acid Production	68
3.1.2	Safer Gasoline	71
3.2	Introduction to Life-Cycle Assessment	72
3.2.1	Four Stages of LCA	75
3.2.2	Adipic-Acid Example	79
3.2.3	Carbon Footprinting	79
3.3	Green Process Metrics	80
3.4	Environmental Management Systems (EMS)	84
3.4.1	ISO 14001	85
3.4.2	ISO 50001	89
3.5	Legislation	90
3.5.1	Industrial Emissions Directive (IED)	91
3.5.2	Clean Air and Clean Water Acts	91
3.6	Chemical Product Legislation	92
	Further Reading	94
Chapter 4	Catalysis and Green Chemistry	95
4.1	Introduction to Catalysis	95
4.1.1	Comparison of Catalyst Types	97
4.2	Heterogeneous Catalysts	99
4.2.1	Basics of Heterogeneous Catalysis	100
4.2.2	Zeolites and the Bulk Chemical Industry	102
4.2.3	Heterogeneous Catalysts in the Inorganic Chemical Industry	111
4.2.4	Heterogeneous Catalysis in the Fine Chemical and Pharmaceutical Industries	112
4.2.5	Catalytic Converters	122

4.3 Homogeneous Catalysts	124
4.3.1 Transition-Metal Catalysts With Phosphine or Carbonyl Ligands	125
4.3.2 Greener Lewis Acids	129
4.3.3 Asymmetric Catalysis	130
4.4 Phase-Transfer Catalysis	136
4.4.1 Hazard Reduction	137
4.4.2 C-C Bond Formation	138
4.4.3 Oxidation Using Hydrogen Peroxide	139
4.5 Biocatalysis	140
4.6 Photocatalysis	144
4.7 Conclusions	145
Further Reading	146
Chapter 5 Organic Solvents: Environmentally Benign Solutions	147
5.1 Organic Solvents and Volatile Organic Compounds	147
5.2 Solvent-Free Systems	149
5.3 Supercritical Fluids	151
5.3.1 Supercritical Carbon Dioxide (scCO ₂)	153
5.3.2 Supercritical Water	164
5.4 Water as a Reaction Solvent	165
5.4.1 Water-Based Coatings	169
5.5 Ionic Liquids	171
5.5.1 Ionic Liquids as Catalysts	173
5.5.2 Ionic Liquids as Solvents	175
5.6 Fluorous Biphasic Solvents	179
5.7 Comparing Greenness of Solvents	181
5.8 Conclusions	182
Further Reading	183
Chapter 6 Renewable Resources	184
6.1 Biomass as a Renewable Resource	184
6.2 Energy	185
6.2.1 Fossil Fuels	185
6.2.2 Energy from Biomass	189
6.2.3 Solar Power	197
6.2.4 Other Forms of Renewable Energy	200
6.2.5 Fuel Cells	200
6.3 Chemicals from Renewable Feedstocks	206
6.3.1 Chemicals from Fatty Acids	208
6.3.2 Polymers from Renewable Resources	217
6.4 Some other Chemicals from Natural Resources	224
6.4.1 Furans	224

6.4.2 Levulinic Acid	226
6.4.3 Adipic Acid	227
6.4.4 1,3 Propane Diol	228
6.4.5 Maleic Acid/Anhydride	229
6.4.6 Glycerol	229
6.4.7 Sorbitol	230
6.4.8 Succinic/Butanedioic Acid	231
6.5 Alternative Economies	231
6.5.1 The Syngas Economy	232
6.5.2 The Hydrogen Economy	233
6.6 The Biorefinery	235
6.7 Conclusions	237
Further Reading	237
Chapter 7 Emerging Greener Technologies and Alternative Energy Sources	238
7.1 Design for Energy Efficiency	238
7.2 Photochemical Reactions	242
7.2.1 Advantages of and Challenges Faced by Photochemical Processes	242
7.2.2 Examples of Photochemical Reactions	245
7.3 Chemistry Using Microwaves	249
7.3.1 Microwave Heating	249
7.3.2 Microwave-Assisted Reactions	250
7.4 Sonochemistry	254
7.4.1 Sonochemistry and Green Chemistry	256
7.5 Electrochemical Synthesis	258
7.5.1 Examples of Electrochemical Synthesis	259
7.6 Conclusions	262
Further Reading	262
Chapter 8 Designing Greener Processes	263
8.1 Introduction	263
8.2 Conventional Reactors	264
8.2.1 Batch Reactors	264
8.2.2 Continuous Reactors	267
8.3 Inherently Safer Design	269
8.3.1 Minimisation	271
8.3.2 Simplification	272
8.3.3 Substitution	272
8.3.4 Moderation	273
8.3.5 Limitation	274
8.4 Process Intensification	275
8.4.1 Some PI Equipment	276
8.4.2 Some Examples of Intensified Processes	280

8.5	Inprocess Monitoring	282
8.5.1	Near-Infrared Spectroscopy	285
8.6	Process Safety	286
	Further Reading	287
Chapter 9	Industrial Case Studies	288
9.1	Introduction	288
9.2	Methyl Methacrylate	288
9.3	Acetic Acid	290
9.4	EPDM Rubbers	295
9.5	Vitamin C	298
9.6	Leather Manufacture	299
9.6.1	Tanning	302
9.6.2	Fatliquoring	305
9.7	Dyeing to be Green	306
9.7.1	Some Manufacturing and Improvements	307
9.7.2	Dye Application	310
9.8	Polyethylene	311
9.8.1	Radical Process	311
9.8.2	Ziegler–Natta Catalysis	312
9.8.3	Metallocene Catalysis	313
9.8.4	Postmetallocene Catalysts	315
9.8.5	Degradable Polyethylene	316
9.9	Ecofriendly Pesticides	316
9.9.1	Insecticides	317
9.10	Epichlorohydrin	319
9.11	Can all Paints be Green?	321
9.11.1	Water-Based Paints	322
9.11.2	High-Solids Paints	322
9.11.3	Low-TiO ₂ Paints	323
9.12	Sulfuric Acid	323
Chapter 10	The Future is Green: An Integrated Approach to a Greener Chemical Industry	327
10.1	Society and Sustainability	327
10.2	Barriers and Drivers	328
10.3	The Role of Legislation	330
10.4	The Circular Economy	332
10.5	Green Chemical Supply Strategies	333
10.6	Greener Energy	335
10.7	Carbon Capture and Utilisation	336
10.8	Conclusions	338
	Further Reading	338
	Subject Index	339
