<i>About the author</i>	IX
<i>Preface</i>	XI
Introduction	1
Fractured rock hydraulics	1
Scope	2
Chapter 1 Fundamentals	3
1.1 Basic concepts	3
1.1.1 Pseudo-continuity	3
1.1.2 Observation scale	4
1.1.3 Description at different scales	8
1.1.4 Representative elementary volume	8
1.1.5 Hydraulic variables	8
1.1.5.1 Introduction	8
1.1.5.2 Specific discharge	9
1.1.5.3 Hydraulic gradient	10
1.1.6 Hydraulic conductivity	17
1.1.6.1 Introduction	17
1.1.6.2 Fractures and conduits	19
1.2 Governing equations	28
1.2.1 Preliminaries	28
1.2.2 Energy conservation principle: Darcy's law	28
1.2.3 Mass conservation principle: continuity equation	30
1.2.3.1 General equation	30
1.2.3.2 Dupuit's approximation	31
1.2.4 Boundary and initial conditions	35
1.2.4.1 Main boundary types	35
1.2.4.2 Submerged boundaries	36
1.2.4.3 Impervious boundaries	36
1.2.4.4 Seepage boundaries	37
1.2.4.5 Unconfined groundwater-air interface	37

1.3	Addenda to Chapter 1	39
1.3.1	Addendum 1.1: Effective velocity and specific discharge	39
1.3.2	Addendum 1.2: Hydrodynamic gradient	40
1.3.3	Addendum 1.3: Hydraulic conductivity for randomly fractured subsystems	41
1.3.4	Addendum 1.4: Energy conservation principle	42
1.3.5	Addendum 1.5: Mass conservation principle	43
Chapter 2	Approximate solutions	47
2.1	Overview	47
2.2	Differential operators	48
2.3	Uniqueness of solutions	53
2.4	Approximate solution errors	53
2.5	Approximation methods	59
2.5.1	Preliminaries	59
2.5.2	Collocation method	60
2.5.3	Least squares method	65
2.5.4	Galerkin's method	71
2.5.4.1	Orthogonality	71
2.5.4.2	Galerkin's approach	71
2.5.4.3	"Weak solutions"	76
2.5.4.4	Variational notation	77
2.5.5	Time-dependent solutions	80
2.6	Addenda to Chapter 2	87
2.6.1	Addendum 2.1: Classification of second order linear partial differential equations	87
2.6.2	Addendum 2.2: Minimisation of the sum of the squared residuals	88
2.6.3	Addendum 2.3: Minimisation of the sum of the squared residuals transformed by the differential operators D_V and D_N	89
2.6.4	Addendum 2.4: The concept of "orthogonality"	89
Chapter 3	Data analysis	91
3.1	Preliminaries	91
3.2	Analysing geological features	91
3.3	Handling of hydraulic head data	91
3.3.1	Variation in time	93
3.3.2	Variation in space	96
3.4	Handling of flow rate data	105
3.5	Handling of hydraulic conductivity data	107
3.5.1	Preliminaries	107
3.6	Hydraulic transmissivity and connectivity	108
3.6.1	Preliminaries	108
3.6.2	Hydraulic conductivity appraisal	108
3.6.2.1	Hydraulic tests at "core sample" scale	109
3.6.2.2	Hydraulic tests at "borehole integral core" scale	109
3.6.2.3	Hydraulic tests at "cluster of boreholes" scale	112
3.6.2.4	Hydraulic tests at "aquifer" scale	115

3.6.3	Hydraulic connectivity appraisal	119
3.6.3.1	Dynamic correlations of WT time series	119
3.6.3.2	Filtering WT contour maps	119
3.7	Modelling hydrogeological systems	120
3.7.1	Concepts	120
3.7.2	Guidelines to conceptual models	121
Chapter 4	Finite differences	125
4.1	Preliminaries	125
4.2	Finite difference basics	125
4.2.1	Difference equations	125
4.2.2	Finite differences	126
4.2.3	Difference equations for steady-state systems	128
4.2.4	Difference equations for unsteady-state systems	131
4.2.5	Difference equations for boundary conditions	133
4.2.6	Simultaneous difference equations	134
4.2.6.1	Preliminaries	134
4.2.6.2	Gauss-Seidel iterative routine	134
4.2.6.3	Crank-Nicholson iterative routine	140
4.3	Finite differences algorithms for fractured rock masses	143
4.3.1	Preliminaries	143
4.3.2	Steady-state solutions	144
4.3.2.1	Dupuit's approximation	144
4.3.2.2	3D algorithms	158
4.3.3	Transient solutions	174
	Subject Index	177
