Preface page xii			
1	Introduc	tion: the need for a quantum theory	1
	1.1	Introducing quantum mechanics	1
2	Experim	ental foundations of quantum theory	5
	2.1	Black-body radiation	5
		2.1.1 Kirchhoff laws	6
		2.1.2 Electromagnetic field in a hollow cavity	7
		2.1.3 Stefan and displacement laws	9
		2.1.4 Planck model	13
		2.1.5 Contributions of Einstein	17
		2.1.6 Dynamic equilibrium of the radiation field	19
	2.2	Photoelectric effect	19
		2.2.1 Classical model	21
		2.2.2 Quantum theory of the effect	23
	2.3	Compton effect	25
		2.3.1 Thomson scattering	29
	2.4	Particle-like behaviour and the Heisenberg picture	30
		2.4.1 Atomic spectra and the Bohr hypotheses	30
	2.5	Corpuscular character: the experiment of Franck and Hertz	34
	2.6	Wave-like behaviour and the Bragg experiment	35
		2.6.1 Connection between the wave picture and the discrete-level	
		picture	35
	2.7	Experiment of Davisson and Germer	39
	2.8	Interference phenomena among material particles	41
	Appen	dix 2.A Classical electrodynamics and the Planck formula	46
3	Waves a	and particles	51
	3.1	Waves: d'Alembert equation	51
	3.2	Particles: Hamiltonian equations	58
		3.2.1 Poisson brackets among velocity components for a charged	
		particle	62
	3.3	Homogeneous linear differential operators and equations of motion	64
	3.4	Symmetries and conservation laws	65

viii Contents

		3.4.1	Homomorphism between $SU(2)$ and $SO(3)$	67	
	3.5	Motiva	ations for studying harmonic oscillators	72	
	3.6		lex coordinates for harmonic oscillators	74	
	3.7	Canonical transformations			
3.8 Time-dependent Hami			dependent Hamiltonian formalism	75 76	
	3.9	Hamilton–Jacobi equation			
	3.10	Motion	n of surfaces	81	
	Append	lix 3.A	Space-time picture	83	
		3.A.1	Inertial frames and comparison dynamics	84	
		3.A.2	Lagrangian descriptions of second-order differential equations	85	
		3.A.3	Symmetries and constants of motion	88	
		3.A.4	Symmetries and constants of motion in the Hamiltonian		
			formalism	91	
		3.A.5	Equivalent reference frames	92	
4	Schrödir	ıger pictı	ure, Heisenberg picture and probabilistic aspects	94	
	4.1	From o	classical to wave mechanics	94	
		4.1.1	Properties of the Schrödinger equation	96	
		4.1.2	Physical interpretation of the wave function	100	
		4.1.3	Mean values	103	
		4.1.4	Eigenstates and eigenvalues	106	
	4.2	Probab	pility distributions associated with vectors in Hilbert spaces	106	
	4.3	Uncert	tainty relations for position and momentum	109	
	4.4	Transf	formation properties of wave functions	111	
		4.4.1	Direct approach to the transformation properties of the		
			Schrödinger equation	113	
		4.4.2	Width of the wave packet	114	
	4.5	Heisen	aberg picture	115	
	4.6	States	in the Heisenberg picture	119	
	4.7	'Concl	lusions': relevant mathematical structures	120	
5	Integrat	ing the e	equations of motion	122	
	5.1	Green	kernel of the Schrödinger equation	122	
		5.1.1	Discrete version of the Green kernel by using a fundamental		
			set of solutions	125	
		5.1.2	General considerations on how we use solutions of the		
			evolution equation	127	
	5.2	Integra	ating the equations of motion in the Heisenberg picture:		
		harmo	nic oscillator	129	
6	Element	ary appli	ications: one-dimensional problems	131	
	6.1	Bound	lary conditions	131	
		6.1.1	Particle confined by a potential	132	
		6.1.2	A closer look at improper eigenfunctions	134	

ix Contents

27-22-15-03 严值

	6.2	Reflection and transmission	135
	6.3	Step-like potential	139
	0.5	6.3.1 Tunnelling effect	142
	6.4	One-dimensional harmonic oscillator	143
	0.1	6.4.1 Hermite polynomials	146
	6.5	Problems	147
		lix 6.A Wave-packet behaviour at large time values	148
7	Element	ary applications: multi-dimensional problems	151
	7.1	The Schrödinger equation in a central potential	151
		7.1.1 Use of symmetries and geometrical interpretation	158
		7.1.2 Angular momentum operators and spherical harmonics	159
		7.1.3 Angular momentum eigenvalues: algebraic treatment	162
		7.1.4 Radial part of the eigenvalue problem in a central potential	163
	7.2	Hydrogen atom	165
		7.2.1 Runge–Lenz vector	168
	7.3	s-Wave bound states in the square-well potential	170
	7.4	Isotropic harmonic oscillator in three dimensions	172
	7.5	Multi-dimensional harmonic oscillator: algebraic treatment	174
		7.5.1 An example: two-dimensional isotropic harmonic oscillator	175
	7.6	Problems	177
8	Coheren	t states and related formalism	180
	8.1	General considerations on harmonic oscillators and coherent states	180
	8.2	Quantum harmonic oscillator: a brief summary	182
	8.3	Operators in the number operator basis	185
	8.4	Representation of states on phase space, the Bargmann-Fock	
		representation	186
		8.4.1 The Weyl displacement operator	100
	8.5		188
	0.5	Basic operators in the coherent states' basis	188
	8.6	Basic operators in the coherent states' basis Uncertainty relations	
		Basic operators in the coherent states' basis	190
	8.6	Basic operators in the coherent states' basis Uncertainty relations	190 191
9	8.6 8.7 8.8	Basic operators in the coherent states' basis Uncertainty relations Ehrenfest picture	190 191 192
9	8.6 8.7 8.8	Basic operators in the coherent states' basis Uncertainty relations Ehrenfest picture Problems	190 191 192 194
9	8.6 8.7 8.8	Basic operators in the coherent states' basis Uncertainty relations Ehrenfest picture Problems ction to spin	190 191 192 194
9	8.6 8.7 8.8 Introdu 9.1	Basic operators in the coherent states' basis Uncertainty relations Ehrenfest picture Problems ction to spin Stern—Gerlach experiment and electron spin	190 191 192 194 195 195 199 201
9	8.6 8.7 8.8 Introdu 9.1 9.2	Basic operators in the coherent states' basis Uncertainty relations Ehrenfest picture Problems ction to spin Stern–Gerlach experiment and electron spin Wave functions with spin	190 191 192 194 195 195 199 201 203
9	8.6 8.7 8.8 Introdu 9.1 9.2 9.3	Basic operators in the coherent states' basis Uncertainty relations Ehrenfest picture Problems ction to spin Stern—Gerlach experiment and electron spin Wave functions with spin Addition of orbital and spin angular momenta	190 191 192 194 195 195 199 201
9	8.6 8.7 8.8 Introdu 9.1 9.2 9.3 9.4	Basic operators in the coherent states' basis Uncertainty relations Ehrenfest picture Problems ction to spin Stern—Gerlach experiment and electron spin Wave functions with spin Addition of orbital and spin angular momenta The Pauli equation	190 191 192 194 195 195 199 201 203
9	8.6 8.7 8.8 Introdu 9.1 9.2 9.3 9.4	Basic operators in the coherent states' basis Uncertainty relations Ehrenfest picture Problems ction to spin Stern—Gerlach experiment and electron spin Wave functions with spin Addition of orbital and spin angular momenta The Pauli equation Solutions of the Pauli equation	190 191 192 194 195 195 199 201 203 205 207 209

X Contents

10	Symmet	ries in quantum mechanics	214	
	10.1	Meaning of symmetries	214	
		10.1.1 Transformations that preserve the description	216	
	10.2	Transformations of frames and corresponding quantum symmetries	222	
		10.2.1 Rototranslations	222	
	10.3	Galilei transformations	226	
	10.4	Time translation	229	
	10.5	Spatial reflection	230	
	10.6	Time reversal	232	
	10.7	Problems	232	
11	Approxir	nation methods	234	
11A	Perturba	ition theory	235	
	11A.1	Approximation of eigenvalues and eigenvectors	235	
	11A.2	Hellmann–Feynman theorem	239	
	11A.3	Virial theorem	241	
		Anharmonic oscillator	245	
	11A.5	Secular equation for problems with degeneracy	248	
	11A.6	Stark effect	249	
		Zeeman effect	251	
		Anomalous Zeeman effect	254	
		Relativistic corrections (α^2) to the hydrogen atom	256	
		Variational method	258	
		Time-dependent formalism	259	
		Harmonic perturbations	261	
		Fermi golden rule	263	
		Towards limiting cases of time-dependent theory	263	
		Adiabatic switch on and off of the perturbation	266	
		Perturbation suddenly switched on	266	
		Two-level system	267	
		The quantum K^0 – K^0 system	269	
	11A.19	The quantum system of three active neutrinos	271	
11B	Jeffreys-Wentzel-Kramers-Brillouin method			
	11B.1	The JWKB method	274	
	11B.2	Potential barrier	277	
	11B.3	Energy levels in a potential well	278	
	11B.4	α -decay	279	
110	Scatterin	ng theory	282	
	11C.1	Aims and problems of quantum scattering theory	282	
	11C.2	Time-dependent scattering	282	
	11C.3	An example: classical scattering	284	

xi Contents

	11C.4		dependent scattering	287
		11C.4.1	One-dimensional stationary description of scattering	287
	11C.5	_	equation for scattering problems	289
	11C.6	The Bor	m series	293
	11C.7	Partial v	vave expansion	295
	11C.8	s-Wave	scattering states in the square-well potential	298
	11C.9	Problem	ıs	299
12	Modern	pictures of	f quantum mechanics	301
	12.1	-	m mechanics on phase space	301
	12.2	Represe	entations of the group algebra	304
	12.3	Moyal b	prackets	308
	12.4	Tomogra	aphic picture: preliminaries	309
	12.5	Tomogra	aphic picture	311
		12.5.1	Classical tomography	312
			Quantum tomography	313
	12.6		of quantum mechanics for a two-level system	315
		12.6.1	von Neumann picture	317
		12.6.2	Heisenberg picture	319
		12.6.3	Unitary group $U(2)$	320
		12.6.4	A closer look at states in the Heisenberg picture	321
			Weyl picture	322
		12.6.6	Probability distributions and states	324
			Ehrenfest picture	325
	12.7	Compos	site systems	329
		12.7.1	Inner product in tensor spaces	330
			Complex linear operators in tensor spaces	330
		12.7.3	Composite systems and Kronecker products	331
	12.8	Identica	l particles	332
		12.8.1	Product basis	332
		12.8.2	Exchange symmetry	333
			Exchange interaction	334
		12.8.4	Two-electron atoms	335
	12.9	General	ized paraFermi and paraBose oscillators	337
	12.10	Problem	ıs	337
13	Formula	tions of au	uantum mechanics and their physical implications	339
	13.1		s an overall view	339
	13.2		chrödinger to Feynman	339
		13.2.1	Remarks on the Feynman approach	341
	13.3		egral for systems interacting with an electromagnetic field	344
	13.4		tion of quantum theory and special relativity	346
	13.5		es: quantum mechanics leads to new fundamental symmetries	351
