<i>Preface</i>	x
<i>About the Author</i>	xv
1. Introduction	1
2. Process Dynamics	3
2.1 Definition	3
2.2 Cascade Control	10
2.3 Model Identification	12
2.4 Integrating Processes	26
2.5 Other Types of Process	29
2.6 Robustness	31
3. PID Algorithm	35
3.1 Definitions	35
3.2 Proportional Action	36
3.3 Integral Action	41
3.4 Derivative Action	43
3.5 Versions of Control Algorithm	49
3.6 Interactive PID Controller	51
3.7 Proportional-on-PV Controller	56
3.8 Nonstandard Algorithms	64
3.9 Tuning	65
3.10 Ziegler-Nichols Tuning Method	66
3.11 Cohen-Coon Tuning Method	72
3.12 Tuning Based on Penalty Functions	73
3.13 Manipulated Variable Overshoot	77
3.14 Lambda Tuning Method	80
3.15 IMC Tuning Method	80
3.16 Choice of Tuning Method	83
3.17 Suggested Tuning Method for Self-Regulating Processes	84
3.18 Tuning for Load Changes	87
3.19 Tuning for SP Ramps	89
3.20 Tuning for Unconstrained MV Overshoot	91
3.21 PI Tuning Compared to PID Tuning	92
3.22 Tuning for Large Scan Interval	94
3.23 Suggested Tuning Method for Integrating Processes	97
3.24 Measure of Robustness	99
3.25 Implementation of Tuning	100

3.26	Tuning Cascades	101
3.27	Loop Gain	104
3.28	Adaptive Tuning	105
3.29	Initialisation	106
3.30	Anti-Reset Windup	108
3.31	On-Off Control	109
4.	Level Control	112
4.1	Use of Cascade Control	112
4.2	Parameters Required for Tuning Calculations	113
4.3	Tight Level Control	120
4.4	Averaging Level Control	122
4.5	Error-Squared Controller	129
4.6	Gap Controller	132
4.7	Impact of Noise on Averaging Control	134
4.8	Potential Disadvantage of Averaging Level Control	136
4.9	General Approach to Tuning	137
4.10	Three-Element Level Control	139
5.	Signal Conditioning	143
5.1	Instrument Linearisation	143
5.2	Process Linearisation	145
5.3	Control of pH	147
5.4	Constraint Conditioning	151
5.5	Pressure Compensation of Distillation Tray Temperature	153
5.6	Compensation of Gas Flow Measurement	153
5.7	Filtering	155
5.8	Exponential Filter	157
5.9	Nonlinear Exponential Filter	161
5.10	Moving Average Filter	161
5.11	Least Squares Filter	163
5.12	Tuning the Filter	169
5.13	Control Valve Characterisation	170
5.14	Equal Percentage Valve	172
5.15	Split-Range Valves	178
6.	Feedforward Control	184
6.1	Ratio Algorithm	185
6.2	Bias Algorithm	188
6.3	Deadtime and Lead-Lag Algorithms	190
6.4	Tuning	194
6.5	Laplace Derivation of Dynamic Compensation	199
7.	Deadtime Compensation	201
7.1	Smith Predictor	201
7.2	Internal Model Control	206
7.3	Dahlin Algorithm	206

8. Multivariable Control	210
8.1 Constraint Control	210
8.2 SISO Constraint Control	211
8.3 Signal Selectors	213
8.4 Relative Gain Analysis	217
8.5 Niederlinski Index	226
8.6 Condition Number	227
8.7 Steady State Decoupling	229
8.8 Dynamic Decoupling	231
8.9 MPC Principles	237
8.10 Parallel Coordinates	239
8.11 Enhanced Operator Displays	240
8.12 MPC Performance Monitoring	242
9. Inferentials and Analysers	248
9.1 Inferential Properties	248
9.2 Assessing Accuracy	256
9.3 Laboratory Update of Inferential	262
9.4 Analyser Update of Inferential	266
9.5 Monitoring On-Stream Analysers	268
10. Combustion Control	270
10.1 Fuel Gas Flow Correction	270
10.2 Measuring NHV	278
10.3 Dual Firing	280
10.4 Heater Inlet Temperature Feedforward	281
10.5 Fuel Pressure Control	284
10.6 Firebox Pressure	287
10.7 Combustion Air Control	288
10.8 Boiler Control	299
10.9 Fired Heater Pass Balancing	300
11. Compressor Control	306
11.1 Polytropic Head	306
11.2 Load Control (Turbo-Machines)	310
11.3 Load Control (Reciprocating Machines)	314
11.4 Anti-Surge Control	315
12. Distillation Control	322
12.1 Key Components	325
12.2 Relative Volatility	325
12.3 McCabe-Thiele Diagram	328
12.4 Cut and Separation	333
12.5 Effect of Process Design	345
12.6 Basic Controls	350
12.7 Pressure Control	350
12.8 Level Control	364

12.9	Tray Temperature Control	382
12.10	Pressure Compensated Temperature	393
12.11	Inferentials	402
12.12	First-Principle Inferentials	411
12.13	Feedforward on Feed Rate	413
12.14	Feed Composition Feedforward	416
12.15	Feed Enthalpy Feedforward	418
12.16	Decoupling	419
12.17	Multivariable Control	424
12.18	On-Stream Analysers	433
12.19	Towers with Sidestreams	433
12.20	Column Optimisation	435
12.21	Optimisation of Column Pressure	438
12.22	Energy/Yield Optimisation	441
13.	APC Project Execution	444
13.1	Benefits Study	444
13.2	Benefit Estimation for Improved Regulatory Control	445
13.3	Benefits of Closed-Loop Real-Time Optimisation	455
13.4	Basic Controls	458
13.5	Basic Control Monitoring	459
13.6	Inferential Properties	464
13.7	Organisation	464
13.8	Vendor Selection	468
13.9	Safety in APC Design	471
13.10	Alarms	471
14.	Statistical Methods	473
14.1	Central Limit Theorem	473
14.2	Generating a Normal Distribution	475
14.3	Quantile Plots	477
14.4	Calculating Standard Deviation	478
14.5	Skewness and Kurtosis	480
14.6	Correlation	480
14.7	Confidence Interval	481
14.8	Westinghouse Electric Company Rules	484
14.9	Gamma Function	485
14.10	Student t Distribution	486
14.11	χ^2 Distribution	489
14.12	F Distribution	492
14.13	Akaike Information Criterion	497
14.14	Adjusted R^2	499
14.15	Levene's Test	500
14.16	Box-Wetz Ratio	501
14.17	Regression Analysis	502
14.18	Outliers	513
14.19	Model Identification	514

14.20	Autocorrelation and Autocovariance	518
14.21	Artificial Neural Networks	527
14.22	Repeatability	533
14.23	Reproducibility	533
14.24	Six-Sigma	535
14.25	Data Reconciliation	535
15.	Mathematical Techniques	540
15.1	Fourier Transform	540
15.2	Recursive Filters	548
15.3	Lagrangian Interpolation	553
15.4	Padé Approximation	557
15.5	Laplace Transform Derivations	560
15.6	Laplace Transforms for Processes	563
15.7	Laplace Transforms for Controllers	569
15.8	I-PD versus PI-D Algorithm	572
15.9	Direct Synthesis	573
15.10	Predicting Filter Attenuation	578
15.11	Stability Limit for PID Control	579
15.12	Ziegler-Nichols Tuning from Process Dynamics	583
15.13	Partial Fractions	586
15.14	z-Transforms and Finite Difference Equations	588
	References	594
	Index	596
