

# Contents

Acknowledgments..... xvii

## **CHAPTER 1 An Introduction to Fermentation Processes..... 1**

The Range of Fermentation Processes.....	1
Microbial Biomass.....	3
Microbial Enzymes.....	3
Microbial Metabolites.....	3
Recombinant Products.....	8
Transformation Processes.....	8
The Chronological Development of the Fermentation Industry.....	9
The Component Parts of a Fermentation Process.....	18
References.....	19

## **CHAPTER 2 Microbial Growth Kinetics..... 21**

Batch Culture.....	21
Exponential Phase.....	21
Deceleration and Stationary Phases.....	25
Continuous Culture.....	33
Multistage Systems.....	40
Feedback Systems.....	41
Comparison of Batch and Continuous Culture in Industrial Processes.....	44
Comparison of Batch and Continuous Culture as Investigative Tools.....	55
Fed-Batch Culture.....	58
Variable Volume Fed-Batch Culture.....	58
Fixed Volume Fed-Batch Culture.....	61
Fed-Batch Culture at a Constant Specific Growth Rate.....	62
Cyclic Fed-Batch Culture.....	62
Application of Fed-Batch Culture.....	63
Examples of the Use of Fed-Batch Culture.....	65
References.....	68

## **CHAPTER 3 The Isolation and Improvement of Industrially Important Microorganisms..... 75**

Isolation of Industrially Important Microorganisms.....	75
Isolation Methods Utilizing Selection of the Desired Characteristic.....	78

Isolation Methods not Utilizing Selection of the Desired Characteristic—from the “Waksman Platform” to the 1990s.....	81
Screening Methods and High Throughput Screening .....	84
Return of Natural Products .....	90
Broadening the Base of the Discovery Process and Maximizing Gene Expression.....	91
Improvement of Industrial Microorganisms .....	98
Improvement of Strains Producing Primary Biosynthetic Products .....	99
Improvement of Strains Producing Secondary Biosynthetic Products .....	150
Summary .....	194
References.....	194
<b>CHAPTER 4 Media for Industrial Fermentations .....</b>	<b>213</b>
Introduction.....	213
Typical Media .....	215
Medium Formulation .....	215
Water .....	220
Energy Sources .....	220
Carbon Sources .....	221
Factors Influencing the Choice of Carbon Source.....	221
Examples of Commonly Used Carbon Sources.....	222
Nitrogen Sources.....	227
Examples of Commonly Used Nitrogen Sources .....	227
Factors Influencing the Choice of Nitrogen Source.....	229
Minerals .....	231
Chelators .....	233
Growth Factors.....	234
Nutrient Recycle .....	234
Buffers.....	234
The Addition of Precursors and Metabolic Regulators to Media.....	235
Precursors .....	235
Inhibitors.....	235
Inducers.....	237
Oxygen Requirements.....	239
Fast Metabolism.....	239
Rheology .....	239
Antifoams.....	240
Medium Optimization.....	242
Animal Cell Media.....	251

The Development of Basal Media .....	251
Serum-Free, Animal-Component Free, Protein-Free, and Chemically Defined Media .....	252
References .....	260
<b>CHAPTER 5 Sterilization .....</b>	<b>273</b>
Introduction .....	273
Medium Sterilization .....	275
Design of Batch Sterilization Processes .....	285
Calculation of the Del Factor During Heating and Cooling .....	286
Calculation of the Holding Time at Constant Temperature .....	287
Richards' Rapid Method for the Design of Sterilization Cycles .....	287
Scale Up and Optimization of a Batch Sterilization Process.....	288
An Alternative Approach to Sterilization Kinetics: <i>D</i> , <i>Z</i> , and <i>F</i> Values.....	292
Variation in the Values of Sterilization Kinetic "Constants" .....	298
Methods of Batch Sterilization .....	299
Design of Continuous Sterilization Processes .....	300
Sterilization of the Fermenter .....	307
Sterilization of the Feeds .....	307
Sterilization of Liquid Wastes.....	308
Sterilization by Filtration .....	311
Theory of Nonfixed Pore or Depth Filters .....	317
Filter Sterilization of Liquids.....	319
Filter Sterilization of Fermenter Inlet Air .....	326
Sterilization of Fermenter Exhaust Air .....	327
Vessel Vent Filters.....	330
References.....	330
<b>CHAPTER 6 Culture Preservation and Inoculum Development .....</b>	<b>335</b>
Preservation of Industrially Important Cell Cultures and Microorganisms .....	335
Storage at Reduced Temperature .....	335
Storage in a Dehydrated Form .....	337
Quality Control of Preserved Stock Cultures .....	337
Inoculum Development.....	342
Criteria for the Transfer of Inoculum.....	348
Development of Inocula for Animal Cell Processes .....	351
Development of Inocula for Yeast Processes .....	358
Baker's Yeast.....	358

Brewing.....	358
Fuel Ethanol.....	361
Development of Inocula for Unicellular Bacterial Processes .....	361
Development of Inocula for Mycelial Processes .....	368
Sporulation on Solidified Media.....	368
Sporulation on Solid Media.....	368
Sporulation in Submerged Culture .....	372
Use of the Spore Inoculum .....	375
Inoculum Development for Vegetative Fungi .....	376
Effect of the Inoculum on the Morphology of Filamentous Organisms in Submerged Culture.....	377
Aseptic Inoculation of Plant Fermenters.....	383
Inoculation from a Laboratory Fermenter or a Spore Suspension Vessel .....	384
Inoculation of Disposable Reactors and use of Disposable Connectors .....	387
Inoculation from a Plant Fermenter .....	390
References.....	390

**CHAPTER 7 Design of a Fermenter ..... 401**

Introduction.....	401
Basic Functions of a Fermenter .....	402
Aseptic Operation and Containment .....	405
Fermenter Body Construction.....	409
Construction Materials.....	409
Temperature Control.....	415
Aeration and Agitation.....	417
Agitator (Impeller).....	418
Stirrer Glands and Bearings.....	423
Baffles .....	428
Aeration System (Sparger).....	429
Achievement and Maintenance of Aseptic Conditions .....	431
Sterilization of the Fermenter .....	432
Sterilization of the Air Supply .....	432
Sterilization of the Exhaust Gas from a Fermenter .....	434
Addition of Inoculum, Nutrients, and Other Supplements .....	434
Sampling .....	435
Feed Ports .....	438
Sensor Probes.....	438
Foam Control.....	439
Monitoring and Control of Various Parameters .....	441

Valves and Steam Traps .....	441
Gate Valves .....	442
Globe Valves .....	442
Piston Valves .....	443
Needle Valves .....	443
Plug Valves .....	445
Ball Valves .....	445
Butterfly Valves .....	446
Pinch Valves .....	446
Diaphragm Valves .....	447
Most Suitable Valve .....	448
Check Valves .....	448
Pressure-Control Valves .....	449
Pressure-Reduction Valves .....	449
Pressure-Retaining Valves .....	449
Safety Valves .....	449
Steam Traps .....	451
Complete Loss of Contents from a Fermenter .....	453
Testing New Fermenters .....	453
Scale-Up of Fermenters .....	454
Other Fermentation Vessels .....	454
Waldhof-Type Fermenter .....	454
Acetators and Cavitators .....	455
Tower or Bubble Column Fermenter .....	457
Cylindro-Conical Vessels .....	459
Air-Lift Fermenters .....	461
Deep-Jet Fermenter .....	465
Cyclone Column .....	467
Packed Towers, Biofilters, and Other Fixed Film Processes .....	467
Solid-State Fermenters .....	468
Membrane Fermenters .....	469
Single Use and Disposable Fermenters .....	469
Animal Cell Culture .....	470
Stirred Fermenters .....	472
Air-Lift Fermenters .....	472
Radial Flow Fermenters .....	472
Microcarriers .....	473
Encapsulation .....	474
Hollow Fiber Chambers .....	474
Packed Glass Bead Reactors .....	475
Perfusion Cultures .....	475
References .....	476
Further Reading .....	485

<b>CHAPTER 8 Instrumentation and Control.....</b>	<b>487</b>
Introduction.....	487
Methods of Measuring Process Variables .....	489
Temperature .....	489
Flow Measurement and Control .....	490
Pressure Measurement .....	494
Pressure Control.....	496
Safety Valves.....	496
Agitator Shaft Power .....	496
Rate of Stirring .....	497
Foam Sensing and Control.....	497
Weight.....	498
Microbial Biomass.....	498
Measurement and Control of Dissolved Oxygen.....	499
Inlet and Exit-Gas Analysis .....	502
pH Measurement and Control.....	504
Redox .....	506
Carbon Dioxide Electrodes.....	507
On-Line Analysis of Other Chemical Factors.....	507
Chemical and Ion-Specific Sensors .....	508
Enzyme and Microbial Electrodes (Biosensors).....	508
Near Infrared Spectroscopy .....	509
Mass Spectrometers .....	510
Control Systems.....	510
Manual Control.....	511
Automatic Control .....	512
Combinations of Methods of Control .....	518
Controllers .....	519
More Complex Control Systems.....	519
Computer Applications in Fermentation Technology .....	523
Components of a Computer-Linked System.....	524
Data Logging .....	525
Data Analysis.....	526
Process Control.....	527
References.....	531
<b>CHAPTER 9 Aeration and Agitation .....</b>	<b>537</b>
Introduction.....	537
Oxygen Requirements of Industrial Fermentations .....	537
Oxygen Supply.....	547

Determination of $K_{La}$ Values.....	549
Sulfite Oxidation Technique .....	550
Gassing-Out Techniques .....	550
Oxygen-Balance Technique .....	555
Fluid Rheology.....	557
Bingham Plastic Rheology .....	559
Pseudoplastic Rheology.....	560
Dilatant Rheology .....	560
Casson Body Rheology.....	561
Factors Affecting $K_{La}$ Values in Fermentation Vessels .....	561
Effect of Airflow Rate on $K_{La}$ .....	561
Effect of the Degree of Agitation on $K_{La}$ .....	566
Effect of Medium and Culture Rheology on $K_{La}$ .....	572
Effect of Foam and Antifoams on Oxygen Transfer.....	590
Balance Between Oxygen Supply and Demand .....	591
Controlling Biomass Concentration .....	592
Controlling the Specific Oxygen Uptake Rate.....	594
Scale-Up and Scale-Down .....	594
Influence of Scale-Down Studies.....	595
Approaches to Scale-Up of Aeration and Agitation .....	603
Scale-Up of Air-Lift Reactors.....	607
References.....	608

## **CHAPTER 10 The Recovery and Purification of Fermentation**

<b>Products .....</b>	<b>619</b>
Introduction .....	619
Removal of Microbial Cells and Other Solid Matter.....	623
Foam Separation (Floatation) .....	625
Precipitation .....	626
Filtration.....	627
Theory of Filtration.....	627
Use of Filter Aids.....	629
Continuous Filters.....	632
Cross-Flow Filtration (Tangential Filtration).....	636
Centrifugation .....	637
Cell Aggregation and Flocculation .....	639
Range of Centrifuges .....	640
Cell Disruption.....	647
Physicomechanical Methods .....	647
Chemical and Biological Methods.....	651

Liquid–Liquid Extraction.....	653
Solvent Recovery .....	657
Two-Phase Aqueous Extraction .....	660
Reversed Micelle Extraction .....	661
Supercritical Fluid Extraction .....	661
Adsorption.....	662
Removal of Volatile Products.....	663
Chromatography .....	664
Adsorption Chromatography .....	664
Ion Exchange .....	665
Gel Permeation .....	666
Affinity Chromatography.....	666
Reverse Phase Chromatography (RPC).....	667
High Performance Liquid Chromatography (HPLC) .....	667
Continuous Chromatography .....	668
Membrane Processes.....	669
Ultrafiltration and Reverse Osmosis .....	669
Ultrafiltration .....	669
Reverse Osmosis.....	670
Liquid Membranes.....	670
Drying .....	671
Crystallization.....	673
Whole Broth Processing .....	674
References.....	677
Further Reading .....	686

**CHAPTER 11 Effluent Treatment.....687**

Introduction.....	687
Sustainability .....	689
Dissolved Oxygen Concentration as an Indicator of Water Quality.....	689
Site Surveys.....	690
Strengths of Fermentation Effluents .....	692
Treatment and Disposal of Effluents.....	694
Disposal.....	694
Seas and Rivers .....	694
Lagoons (Oxidation Ponds) .....	695
Spray Irrigation.....	695
Landfilling.....	696
Incineration .....	696
Disposal of Effluents to Sewers .....	697

Treatment Processes.....	697
Physical Treatment.....	698
Chemical Treatment.....	700
Biological Treatment .....	701
Aerobic Processes.....	701
Anaerobic Treatment .....	711
Advanced or Tertiary Treatment.....	714
Constructed Wetlands .....	715
By-Products.....	716
Distilleries.....	716
Breweries .....	717
Amino Acid Wastes.....	717
Fuel Alcohol Wastes .....	717
References.....	718
Further Reading .....	723
<b>CHAPTER 12 The Production of Heterologous Proteins .....</b>	<b>725</b>
Introduction.....	725
Heterologous Protein Production by Bacteria.....	727
Cloning Vectors.....	732
Expression Vectors.....	733
The Manipulation of the Host Bacterium .....	744
Heterologous Protein Production by Yeast.....	750
Yeast Expression Vectors .....	751
Protein Secretion.....	755
The Manipulation of the Host.....	756
Heterologous Protein Production by Mammalian Cell Cultures .....	757
Transient Gene Expression .....	758
Stable Gene Expression .....	760
Other Contributing Factors to the Success of Mammalian Cell Culture Processes .....	768
References.....	769
<b>Index.....</b>	<b>777</b>
