Preface to English Edition ix
Preface to Japanese Edition xi
Author xiii

1. Task of Imaging and Role of Image Sensors 1
1.1 Factors Constructing Image Information 1
1.2 Image Sensor Output and Structure of Image Signal 4
1.2.1 Monochrome Still Images 4
1.2.2 Color Still Images 5
1.2.3 Color Moving Images 6
1.3 Functional Elements of Image Sensors 9
References 10

2. Device Elements and Circuits for Image Sensors 11
2.1 Device Element Components 11
2.1.1 Foundation of Silicon Device Physics 11
2.1.2 *pn*-Junction 14
2.1.3 MOS Structure 17
2.1.4 Buried MOS Structure 20
2.1.5 Photogate 24
2.1.6 Photodiode 25
2.1.7 Buried Photodiode/Pinned Photodiode 25
2.2 Silicon as a Photosensitive Material 26
2.2.1 *np* Photodiode on *p*-Type Substrate 27
2.2.2 *npn* Photodiode on *p*-Well 29
2.3 Circuit Components 29
2.3.1 Floating Diffusion Amplifier 29
2.3.2 Source Follower Amplifier 30
2.3.3 Correlated Double Sampling Circuit 32
References 34

3. Major Types of Noise in Image Sensors 35
3.1 Amplitude of Noise 35
3.2 Circuitry Noise (kTC Noise) 37
3.3 Transistor Noise 39
3.3.1 1/f Noise 39
3.3.2 Thermal Noise 39
3.3.3 Random Telegraph Noise 40
3.4 Shot Noise 41
3.5 FDA Noise Reduction by CDS 43
References 45

4. Integration Period and Scanning Mode 47
4.1 Progressive Mode 47
4.2 Interlaced Mode 47
4.3 Electronic Shutter Mode 49

5. Types of Image Sensors 51
5.1 CCD Sensors 51
5.1.1 Principle of CCDs 51
5.1.1.1 Interline Transfer CCDs 57
5.1.1.2 Basic Pixel Structure of IT-CCD 59
5.1.2 Pixel Technology of IT-CCD 62
5.1.2.1 Vertical Overflow Drain Structure 63
5.1.2.2 Depleted Photodiode and Transfer Mechanism 66
5.1.2.3 Buried Photodiode/Pinned Photodiode 70
5.1.3 Progress of CCD Sensor 73
5.1.3.1 Frame Transfer CCD 73
5.1.3.2 Frame-Interline Transfer CCD 74
5.2 MOS Sensors 76
5.2.1 Principle of MOS Sensors 76
5.2.2 Pixel Technology of MOS Sensors 80
5.2.3 Progress in MOS Sensors 81
5.2.3.1 Pixel Interpolation Array Imager 81
5.2.3.2 Transversal Signal Line Imager 82
5.3 CMOS Sensors 83
5.3.1 Principle of CMOS Sensors 83
5.3.2 Pixel Technology of CMOS Sensors 84
5.3.2.1 Three-Transistor Pixel Configuration 84
5.3.2.2 Four-Transistor Pixel Configuration 90
5.3.2.3 Shared Pixel Architecture 93
5.3.3 Progress in CMOS Sensors 95
5.3.3.1 Noise Reduction Circuits in Analog Output Sensor 95
5.3.3.2 Digital Output Sensors 97
5.3.3.3 Sensitivity Improvement Technology 110
5.3.3.4 Organic Sensors 116
5.4 Electronic Shutter 120
5.4.1 Electronic Shutter of CCD Sensors 120
5.4.2 Electronic Shutter of MOS and CMOS Sensors 121
5.5 Comparison of Situation and Prospects of Each Sensor Type 123
References 126

6. Impacts of Digitization by Built-In Coordinate Points on Image Information Quality 131
6.1 Sampling and Sampling Theorem 131
6.2 Sampling in Space Domain 133
6.3 Sampling in Time Domain 138
6.4 Sampling in Wavelength Domain and Color Information 139
References 142

7. Technologies to Improve Image Information Quality 143
7.1 Light Intensity Information 143
7.1.1 Sensitivity 143
7.1.2 Dynamic Range 145
7.1.2.1 Hyper-D CCD 145
7.1.2.2 CMOS Image Sensor with Lateral Overflow Capacitor 146
7.2 Space Information 147
7.3 Time Information 150
7.3.1 Frame-Based Sensors 150
7.3.1.1 Parallel Output–Type Sensor 150
7.3.1.2 Column-Parallel ADC-Type Sensor 151
7.3.1.3 Burst-Type Sensor 151
7.3.1.4 Coexistence Type of Burst and Continuous Imaging Modes 153
7.3.2 Event-Driven Sensor 154
7.4 Color and Wavelength Information 155
7.4.1 Single-Chip Color Camera System 155
7.4.2 Multiband Camera System 156
7.4.3 Hyperspectral Imaging System 156
References 157

8. Imaging Systems 159
8.1 Deteriorating Elements of Image Information Quality 159
8.2 Signal Processing 162
8.2.1 Defect Correction, Brightness Correction 163
8.2.2 White Balance 163
8.2.3 Demosaicking 164
8.2.4 Color Conversion 165
8.2.5 Color and Tone Matching 165
8.2.6 Noise Reduction 166
8.2.7 Edge Enhancement 167
8.2.8 Image Format 167
8.2.9 Problem of DSP Correction Dependence Syndrome 167
8.3 Three-Chip Color Camera System 168
Reference 168

Epilogue 169

Index 171
