Contents

Preface *xi*
List of Abbreviations *xvii*
List of Symbols *xix*

1 **Introduction to Power System Analysis** *1*
1.1 Introduction *1*
1.2 Scope of the Material *2*
1.3 General Characteristics of Power Systems *5*
1.3.1 AC versus DC Systems *5*
Shape of the alternating voltage *6*
Sinusoidal alternating voltage *7*
1.3.2 50 and 60 Hz Frequency *9*
1.3.3 Balanced Three-Phase Systems *10*
Power considerations *12*
Rotating magnetic field *14*
1.3.4 Voltage Levels *17*
Line-to-line and line-to-neutral voltages *19*
1.4 Phasors *20*
1.4.1 Network Elements in the Phasor Domain *22*
1.4.2 Calculations in the Phasor Domain *24*
1.5 Equivalent Line-to-neutral Diagrams *28*
1.6 Power in Single-phase Circuits *30*
1.6.1 Active and Reactive Power *31*
1.6.2 Complex Power *34*
1.6.3 Power Factor *38*
1.7 Power in Three-phase Circuits *40*
1.8 Per-unit Normalization *41*
1.9 Power System Structure *45*
Problems *47*
References *49*

2 The Generation of Electric Energy *51*
2.1 Introduction *51*
2.2 Thermal Power Plants *53*
2.2.1 The Principles of Thermodynamics *53*
2.3 Nuclear Power Plants *58*
2.3.1 Nuclear Fission *59*
2.3.2 Nuclear Fusion *62*
2.4 Renewable Energy *63*
2.4.1 Wind Energy and Wind Turbine Concepts *63*
2.4.2 Hydropower and Pumped Storage *67*
2.4.3 Solar Power *69*
2.4.4 Geothermal Power *71*
2.5 The Synchronous Machine *74*
Problems *82*
References *84*

3 The Transmission of Electric Energy *85*
3.1 Introduction *85*
3.2 Transmission and Distribution Network *86*
3.3 Network Structures *89*
3.4 Substations *91*
3.5 Substation Concepts *93*
3.5.1 Single Bus System *94*
3.5.2 Double Bus System *95*
3.5.3 Polygon Bus System *96*
3.5.4 One-and-a-Half Circuit Breaker Concept *96*
3.6 Protection of Transmission and Distribution Networks *97*
3.6.1 Protective Relay Operating Principles *99*
3.6.2 Fuses *104*
3.6.3 Circuit Breakers *106*
3.6.4 The Switching Arc *107*
3.6.5 Oil Circuit Breakers *109*
3.6.6 Air-Blast Circuit Breakers *109*
3.6.7 SF_6 Circuit Breakers *110*
3.6.8 Vacuum Circuit Breakers *112*
3.7 Surge Arresters *113*
3.8 Transformers *115*
3.8.1 Phase Shifts in Three-Phase Transformers *119*
3.8.2 The Magnetizing Current *123*
3.8.3 Transformer Inrush Current *126*
3.8.4 Open Circuit and Short Circuit Tests *127*

3.9 Power Carriers *129*
3.9.1 Overhead Transmission Lines *131*
Insulators *131*
Bundled conductors *134*
Galloping lines *138*
Ground wires or shield wires *141*
Transposition *144*
3.9.2 Underground Cables *145*
Plastic insulation *147*
Paper–oil insulation *148*
3.9.3 Gas-Insulated Transmission Lines *151*
3.10 High-Voltage Direct Current Transmission *152*
From AC to DC *156*
Problems *160*
References *161*

4 The Utilization of Electric Energy *163*
4.1 Introduction *163*
4.2 Types of Load *164*
4.2.1 Mechanical Energy *165*
Synchronous motors *166*
Induction motors *168*
4.2.2 Light *171*
4.2.3 Heat *173*
4.2.4 DC Electrical Energy *173*
4.2.5 Chemical Energy *175*
4.3 Classification of Grid Users *177*
4.3.1 Residential Loads *177*
4.3.2 Commercial and Industrial Loads *179*
4.3.3 Electric Railways *180*
Problems *182*
Reference *184*

5 Power System Control *185*
5.1 Introduction *185*
5.2 Basics of Power System Control *187*
5.3 Active Power and Frequency Control *190*
5.3.1 Primary Control *190*
5.3.2 Secondary Control or Load Frequency Control (LFC) *196*

5.4 Voltage Control and Reactive Power *198*
5.4.1 Generator Control (AVR) *199*
5.4.2 Tap-Changing Transformers *201*
5.4.3 Reactive Power Injection *203*
Static shunt capacitors and reactors *203*
Synchronous compensators *204*
Static var compensator (SVC) *204*
Static synchronous compensator (STATCOM) *206*
5.5 Control of Transported Power *207*
5.5.1 Controlling Active Power Flows *207*
The phase shifter *208*
5.5.2 Controlling Reactive Power Flows *210*
Static series capacitors *211*
Thyristor-controlled series capacitor (TCSC) *211*
Static synchronous series compensator (SSSC) *212*
5.5.3 Unified Power Flow Controller (UPFC) *214*
5.6 Flexible AC Transmission Systems (FACTS) *215*
Problems *215*
References *218*

6 Energy Management Systems *219*
6.1 Introduction *219*
6.2 Load Flow or Power Flow Computation *220*
6.2.1 Load Flow Equations *220*
6.2.2 General Scheme of the Newton–Raphson Load Flow *230*
6.2.3 Decoupled Load Flow *234*
6.2.4 DC Load Flow *238*
Active power equations *239*
Reactive power equations *240*
6.3 Optimal Power Flow *241*
6.4 State Estimator *242*
6.4.1 General Scheme of the State Estimator *245*
6.4.2 Bad Data Analysis *247*
6.4.3 Statistical Analysis of the State Estimator *254*
Properties of the estimates *254*
Bad data detection *255*
Bad data identification *256*
Problems *257*
References *260*

7 Electricity Markets *261*
7.1 Introduction *261*
7.2 Electricity Market Structure *262*

7.2.1 Transmission and Distribution *262*
7.2.2 Market Architecture *263*
7.3 Market Clearing *265*
7.4 Social Welfare *267*
7.5 Market Coupling *269*
7.6 Allocation Mechanism and Zonal/Nodal Markets *274*
References *277*

8 Future Power Systems *279*
8.1 Introduction *279*
8.2 Renewable Energy *280*
8.3 Decentralized or Distributed Generation *281*
8.4 Power-Electronic Interfaces *285*
8.5 Energy Storage *286*
8.6 Blackouts and Chaotic Phenomena *287*
8.6.1 Nonlinear Phenomena and Chaos *287*
8.6.2 Blackouts *290*
References *298*

A Maxwell's Laws *299*
A.1 Introduction *299*
A.2 Power Series Approach to Time-Varying Fields *300*
A.3 Quasi-static Field of a Parallel-plate Capacitor *302*
A.3.1 Quasi-static Solution *303*
A.3.2 Validity of the Quasi-static Approach *305*
A.4 Quasi-static Field of a Single-turn Inductor *307*
A.4.1 Quasi-static Solution *308*
A.4.2 Validity of the Quasi-static Approach *310*
A.5 Quasi-static Field of a Resistor *312*
A.5.1 Quasi-static Solution *312*
A.6 Circuit Modeling *315*
Reference *316*

B Power Transformer Model *317*
B.1 Introduction *317*
B.2 The Ideal Transformer *317*
B.3 Magnetically Coupled Coils *320*
B.3.1 Equivalence with the Ideal Transformer *323*
B.4 The Nonideal Transformer *324*
B.5 Three-Phase Transformer *327*

C Synchronous Machine Model *329*
C.1 Introduction *329*
C.2 The Primitive Synchronous Machine *329*

C.3 The Single-Phase Synchronous Machine *335*
C.4 The Three-Phase Synchronous Machine *341*
C.5 Synchronous Generator in the Power System *345*

D Induction Machine Model *349*
D.1 Introduction *349*
D.2 The Basic Principle of the Induction Machine *350*
D.2.1 A Single Rotor Winding *351*
D.2.2 Two Rotor Windings *354*
D.2.3 Rotating Rotor *354*
D.3 The Magnetic Field in the Air Gap *356*
D.3.1 Contribution of the Rotor Currents to the Air-Gap Field *356*
D.3.2 The Flux Linkage with the Stator Windings *359*
D.4 A Simple Circuit Model for the Induction Machine *360*
D.4.1 The Stator Voltage Equation *360*
D.4.2 The Induction Machine as Two Magnetically Coupled Coils *361*
D.4.3 A Practical Model of the Induction Machine *362*
D.5 Induction Motor in the Power System *363*

E The Representation of Lines and Cables *365*
E.1 Introduction *365*
E.2 The Long Transmission Line *365*
E.3 The Medium-Length Transmission Line *370*
E.4 The Short Transmission Line *371*
E.5 Comparison of the Three Line Models *371*
E.6 The Underground Cable *374*

Solutions *375*

Further Reading *391*

Index *393*
