Chapter 1 Basic scientific principles of physiology	1
<i>Peter S Vickers</i>	
Introduction	2
Levels of organisation	2
Characteristics of life	2
Bodily requirements	4
Atoms	4
Atomic number	5
Carbon atom	5
Molecules	6
Chemical bonds	6
Ionic bonding of atoms	7
Ions	7
Covalent bonds	8
Polar bonds	10
Electrolytes	10
Elements	11
Properties of elements	12
Compounds	12
Chemical equations/chemical reactions	13
Acids and bases (pH)	15
Blood and pH values	17
Homeostasis	17
Organic and inorganic substances	18
Examples of organic substances	18
Examples of inorganic substances	19
Units of measurement	19
Conclusion	22
Glossary	22
References	24
Activities	24

Chapter 2	Cells, cellular compartments, transport systems, fluid movement between compartments	29
	<i>Muralitharan Nair</i>	
	Introduction	30
	Cell membrane	32
	Functions of the cell membrane	33
	Cellular fluid compartments	34
	Intracellular fluid	35
	Extracellular fluid	36
	Fluid movement between compartments	37
	Composition of body fluid	38
	Effects of water deficiency	38
	Variation in body fluid content	39
	Transport systems	40
	Simple diffusion	40
	Facilitated diffusion	41
	Osmosis	42
	Filtration	43
	Active transport system	43
	Electrolytes	46
	Functions of electrolytes	47
	Hormones that regulate fluid and electrolytes	50
	Antidiuretic hormone	50
	Aldosterone	51
	Atrial natriuretic peptide	52
	Parathyroid hormone	52
	Conclusion	52
	Glossary	53
	References	54
	Further reading	54
	Activities	54
Chapter 3	Genetics	61
	<i>Peter S Vickers</i>	
	Anatomical map	62
	Introduction	62
	The double helix	63
	Nucleotides	63
	Bases	64
	Chromosomes	65
	From DNA to proteins	67
	Protein synthesis	67
	Key steps in protein synthesis	69
	Summary of protein synthesis	72
	The transference of genes	74
	Mitosis	74
	Meiosis	76
	First meiotic division	78

Mendelian genetics	79
Dominant genes and recessive genes	81
Autosomal dominant inheritance and ill health	81
Autosomal recessive inheritance and ill health	81
Morbidity and mortality of dominant versus recessive disorders	84
X-linked recessive disorders	85
Spontaneous mutation	86
Conclusion	86
Glossary	87
References	89
Further reading	89
Activities	90

Chapter 4 Tissue 95

Anthony Wheeldon

Introduction	96
Epithelial tissue	96
Simple epithelium	97
Stratified epithelium	100
Glandular epithelia	102
Connective tissue	102
Connective tissue proper	105
Cartilage	106
Bone	107
Liquid connective tissue	107
Membranes	107
Cutaneous membranes	107
Mucous membranes	108
Seros membranes	109
Synovial membranes	109
Muscle tissue	110
Nervous tissue	112
Tissue repair	112
Conclusion	113
Glossary	113
References	115
Activities	115

Chapter 5 The skeletal system 121

Ian Peate

Body map	122
Introduction	122
The axial and appendicular skeleton	122
The axial skeleton	123
The appendicular skeleton	123
Bone and its functions	123
Support	123
Movement	126

Storage	126
Protection	127
Production	127
Bone formation and growth (ossification)	128
Embryonic formation	128
Intramembranous ossification	129
Endochondral ossification	130
Bone length and thickness	130
Bone remodelling	130
Bone fractures	132
Bone structure and blood supply (histology)	134
Blood supply	135
Organisation of bone based on shape	135
Long bones	136
Short bones	136
Flat bones	139
Irregular bones	139
Sesamoid bones	139
Joints	140
Fibrous joints	140
Cartilaginous joints	141
Synovial joints	141
Conclusion	144
Glossary	144
References	146
Further reading	146
Activities	147

Chapter 6 The muscular system 153

Janet G Miglioizzi

Body map	154
Introduction	154
Types of muscle tissue	154
Smooth or visceral muscle	154
Cardiac	155
Skeletal	155
Functions of the muscular system	155
Maintenance of body posture	155
Production of movement	155
Stabilisation of joints	155
Protection and control of internal tissue structures/organs	155
Generation of heat	156
Composition of skeletal muscle tissue	156
Gross anatomy of skeletal muscles	156
Microanatomy of skeletal muscle fibre	157
The sarcolemma and transverse tubules	157
The sarcoplasm	157
The myofibrils	159
The sarcomeres	159

Types of muscle fibres	159
Blood supply	160
Skeletal muscle contraction and relaxation	160
Energy sources for muscle contraction	163
Aerobic respiration	163
Oxygen debt	164
Muscle fatigue	165
Organisation of the skeletal muscular system	165
Skeletal muscle movement	168
The effects of ageing	177
Conclusion	178
Glossary	178
References	178
Further reading	179
Activities	179

Chapter 7 Circulatory system

185

Muralitharan Nair

Body map	186
Introduction	186
Components of blood	186
Properties of blood	188
Plasma	188
Water in plasma	188
Functions of blood	188
Formation of blood cells	190
Red blood cells	190
Haemoglobin	192
Formation of red blood cells	192
Life cycle of the red blood cell	194
Transport of respiratory gases	195
White blood cells	196
Neutrophils	196
Eosinophils	197
Basophils	197
Monocytes	198
Lymphocytes	198
Platelets	199
Haemostasis	199
Vasoconstriction	199
Platelet aggregation	199
Coagulation	199
Blood groups	202
Blood vessels	203
Structure and function of arteries and veins	204
Capillaries	207
Blood pressure	207
Physiological factors regulating blood pressure	208
Control of arterial blood pressure	208

Lymphatic system	208
Lymph	208
Lymph capillaries and large lymph vessels	210
Lymph nodes	210
Lymphatic organs	213
Spleen	213
The thymus gland	214
Functions of the lymphatic system	214
Conclusion	214
Glossary	215
References	216
Further reading	216
Activities	217

Chapter 8 The cardiac system **223**

Carl Clare

Body map	224
Introduction	224
Size and location of the heart	224
The structures of the heart	225
Heart wall	225
The heart chambers	227
The blood supply to the heart	230
Blood flow through the heart	233
The electrical pathways of the heart	234
The cardiac cycle	239
Factors affecting cardiac output	243
Regulation of stroke volume	243
Preload	243
Force of contraction	244
Afterload	244
Regulation of heart rate	244
Autonomic nervous system activity	245
Baroreceptors and the cardiovascular centre	245
Hormone activity	245
Conclusion	247
Glossary	247
References	250
Further reading	250
Activities	251

Chapter 9 The digestive system **257**

Louise McErlean

Body map	258
Introduction	258
The activity of the digestive system	258
The organisation of the digestive system	259
The digestive system organs	259

The mouth (oral cavity)	259
Pharynx	263
Oesophagus	264
The structure of the digestive system	266
Stomach	267
Small intestine	272
The pancreas	274
The liver and production of bile	276
The functions of the liver	278
The gallbladder	278
The large intestine	278
Digestive tract hormones	281
Nutrition, chemical digestion and metabolism	281
Nutrients	281
Balanced diet	282
Nutrient groups	283
Conclusion	286
Glossary	287
References	291
Further reading	291
Activities	292

Chapter 10 The renal system

299

Muralitharan Nair

Body map	300
Introduction	300
Renal system	300
Kidneys: external structures	301
Kidneys: internal structures	303
Nephrons	306
Functions of the kidney	309
Blood supply of the kidney	311
Urine formation	313
Filtration	313
Selective reabsorption	313
Excretion	314
Hormonal control of tubular reabsorption and secretion	315
Angiotensin and aldosterone	316
Antidiuretic hormone	316
Atrial natriuretic peptide	316
Composition of urine	317
Characteristics of normal urine	318
Ureters	320
Urinary bladder	320
Urethra	322
Male urethra	322
Female urethra	323
Micturition	323

Conclusion	324
Glossary	325
References	325
Further reading	326
Activities	326

Chapter 11 The respiratory system 333

Anthony Wheeldon

Body map	334
Introduction	334
Organisation of the respiratory system	334
The upper respiratory tract	335
The lower respiratory tract	336
Larynx	337
Trachea	338
Bronchial tree	338
Blood supply	341
Respiration	341
Pulmonary ventilation	343
The mechanics of breathing	343
Work of breathing	345
Volumes and capacities	346
Control of breathing	347
External respiration	348
Gaseous exchange	348
Factors influencing diffusion	349
Ventilation and perfusion	352
Transport of gases	352
Transport of oxygen	353
Transport of carbon dioxide	355
Acid–base balance	355
Internal respiration	358
Conclusion	358
Glossary	358
References	362
Further reading	363
Activities	363

Chapter 12 The reproductive systems 371

Ian Peate

Body map	372
Introduction	372
The male reproductive system	373
The testes	373
Spermatogenesis	375
Sperm	376
The testes and hormonal influences	377
The scrotum	379

The penis	380
Epididymis	382
The vas deferens, ejaculatory duct and spermatic cord	382
The prostate gland	382
The female reproductive system	382
The primary genitalia	389
The internal organs	392
The external genitalia	393
The breasts	394
Conclusion	394
Glossary	396
References	397
Further reading	397
Activities	397

Chapter 13 The nervous system

403

Louise McErlean and Janet G Migliozi

Body map	404
Introduction	404
Organisation of the nervous system	405
Sensory division of the peripheral nervous system	405
Central nervous system	406
Motor division of the peripheral nervous system	406
Somatic nervous system	406
Autonomic nervous system	406
Neurones	407
Dendrites	408
Cell body	408
Axons	408
Myelin sheath	408
Sensory (afferent) nerves	409
Motor (efferent) nerves	409
The action potential	409
Simple propagation of nerve impulses	409
Saltatory conduction	409
The refractory period	411
Neurotransmitters	411
Neuroglia	412
The meninges	413
Cerebrospinal fluid	415
The brain	415
Cerebrum	417
Diencephalon	418
Brainstem	418
Cerebellum	418
The limbic system and the reticular formation	419
The peripheral nervous system	420
Cranial nerves	420

The spinal cord	420
Functions of the spinal cord	420
Spinal nerves	421
The autonomic nervous system	426
Sympathetic division (fight or flight)	426
Parasympathetic division (rest and digest)	426
Conclusion	430
Glossary	430
References	432
Further reading	432
Activities	433
Chapter 14 The senses	439
<i>Carl Clare</i>	
Introduction	440
The chemical senses	440
The sense of smell (olfaction)	440
The sense of taste	445
The senses of equilibrium and hearing	449
The structure of the ear	449
Equilibrium	452
Hearing	455
The sense of sight	459
Lacrimal apparatus	460
The eye	460
The processing of visual information	468
Conclusion	469
Glossary	469
References	471
Further reading	472
Activities	472
Chapter 15 The endocrine system	479
<i>Carl Clare</i>	
Body map	480
Introduction	480
The endocrine organs	481
Hormones	482
The transportation of hormones	484
Effects of hormones	485
Control of hormone release	485
Destruction and removal of hormones	486
The physiology of the endocrine organs	486
The hypothalamus and the pituitary gland	486
Hormones released by the anterior pituitary gland	488
Growth hormone	488
Prolactin	489
Follicle-stimulating hormone and luteinising hormone (gonadotrophins)	489

Thyroid-stimulating hormone	489
Adrenocorticotrophic hormone	489
The thyroid gland	490
The parathyroid glands	494
The adrenal glands	495
Adrenal medulla	496
Adrenal cortex	497
Mineralocorticoids	497
Glucocorticoids	498
Pancreas	500
Insulin	501
Glucagon	503
Somatostatin	504
Conclusion	504
Glossary	504
References	505
Further reading	506
Activities	507

Chapter 16 The immune system

513

Peter S Vickers

Body map	514
Introduction	514
Blood cell development	514
Organs of the immune system	517
The thymus	517
The lymphatic system	518
Lymph nodes	520
Lymphoid tissue	522
The spleen	522
Types of immunity	523
The innate immune system	523
Physical barriers	523
Mechanical barriers	524
Chemical barriers	524
Blood cells	524
Blood cells of the immune system	524
The acquired immune system	531
Cell-mediated immunity (T-cell lymphocytes)	531
Humoral immunity (B-cell lymphocytes)	533
Immunoglobulins (antibodies)	535
Immunoglobulin G	536
Immunoglobulin A	536
Immunoglobulin M	536
Immunoglobulin E	537
Immunoglobulin D	537
Role of immunoglobulins	538
Natural killer cells	541

Primary and secondary response to infection	541
Primary immune response	541
Secondary immune response	542
Immunisations	543
Passive immunisation	543
Active immunity	543
Conclusion	543
Glossary	544
References	546
Further reading	546
Activities	547

Chapter 17 The skin **551**

Ian Peate

Body map	552
Introduction	552
The structure of skin	553
The epidermis	553
Keratinocytes	553
Melanocytes	554
Langerhans cells	555
Merkel cells	555
Layers of the epidermis	555
Stratum basale	557
Stratum spinosum	557
Stratum granulosum	557
Stratum lucidum	558
Stratum corneum	558
The dermis	558
The papillary and reticular aspects	558
The accessory skin structures	559
The hair	559
Skin glands	561
Nails	562
The functions of the skin	563
Sensation	563
Thermoregulation	564
Protection	565
Excretion and absorption	566
Synthesis of vitamin D	567
Conclusion	567
Glossary	567
References	568
Further reading	569
Activities	569

<i>Normal values</i>	575
<i>Answers</i>	579
<i>Index</i>	603
