

# DETAILED CONTENTS

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	What is cancer?	2
1.2	Evidence suggests that cancer is a disease of the genome at the cellular level	5
1.3	Influential factors in human carcinogenesis	10
1.4	Principles of conventional cancer therapies	13
1.5	Clinical trials	15
1.6	The role of molecular targets in cancer therapies	16
<b>2</b>	<b>DNA structure and stability: mutations versus repair</b>	<b>22</b>
2.1	Gene structure—two parts of a gene: the regulatory region and the coding region	23
2.2	Mutations	24
2.3	Carcinogenic agents	27
2.4	DNA repair and predispositions to cancer	39
	Ⓢ Therapeutic strategies	43
2.5	Conventional therapies: chemotherapy and radiation therapy	43
2.6	Strategies that target DNA repair pathways	48
<b>3</b>	<b>Regulation of gene expression</b>	<b>53</b>
3.1	Transcription factors and transcriptional regulation	54
3.2	Chromatin structure	61
3.3	Epigenetic regulation of transcription	62
3.4	Evidence of a role for epigenetics in carcinogenesis	65
3.5	Long non-coding RNAs	68
3.6	MicroRNAs (miRNAs) and regulation of mRNA expression	68
3.7	Telomeres and telomerase	70
	Ⓢ Therapeutic strategies	73
3.8	Epigenomic and histonomic drugs	73
3.9	Non-coding RNAs for diagnosis	75
3.10	Telomerase inhibitors	75
<b>4</b>	<b>Growth factor signaling and oncogenes</b>	<b>79</b>
4.1	Epidermal growth factor signaling: an important paradigm	80
4.2	Oncogenes	89
	Ⓢ Therapeutic strategies	97
4.3	Kinases as drug targets	97

<b>5</b>	<b>The cell cycle</b>	<b>109</b>
5.1	Cyclins and cyclin-dependent kinases (cdks)	110
5.2	Mechanisms of cdk regulation	112
5.3	Progression through the G <sub>1</sub> checkpoint	115
5.4	The G <sub>1</sub> checkpoint	117
5.5	The mitotic checkpoint	118
5.6	The cell cycle and cancer	120
	⊙ Therapeutic strategies	123
5.7	Cyclin-dependent kinase inhibitors	123
5.8	Other cell cycle kinase targets	124
5.9	Inhibitors of the mitotic spindle	124
<b>6</b>	<b>Growth inhibition and tumor suppressor genes</b>	<b>128</b>
6.1	Definitions of tumor suppressor genes	128
6.2	The retinoblastoma gene	133
6.3	Mutations in the RB pathway and cancer	134
6.4	The p53 pathway	135
6.5	Mutations in the p53 pathway and cancer	143
6.6	Interaction of DNA viral protein products with RB and p53	145
	⊙ Therapeutic strategies	147
6.7	Targeting of the p53 pathway	147
<b>7</b>	<b>Apoptosis</b>	<b>155</b>
7.1	Molecular mechanisms of apoptosis	156
7.2	Apoptosis and cancer	166
7.3	Apoptosis and chemotherapy	169
	⊙ Therapeutic strategies	171
7.4	Apoptotic drugs	171
<b>8</b>	<b>Cancer stem cells and the regulation of self-renewal and differentiation pathways: focus on colon cancer and leukemias</b>	<b>178</b>
8.1	Cancer stem cells	180
8.2	The regulation of differentiation by gene expression	192
	⊙ Therapeutic strategies	196
8.3	Inhibitors of the Wnt pathway	197
8.4	Inhibitors of the Hh pathway	198
8.5	Inhibitors of PcG proteins	200
8.6	Leukemia and differentiation therapies	200
<b>9</b>	<b>Metastasis</b>	<b>205</b>
9.1	How do tumors spread?	206
9.2	The process of metastasis	206
9.3	Invasion and the epithelial–mesenchymal transition	208
9.4	Intravasation	212

9.5	Transport	213
9.6	Extravasation	213
9.7	Metastatic colonization	215
	⊙ Therapeutic strategies	219
9.8	Metalloproteinase inhibitors (MPis)	220
9.9	Strategies for restoring metastasis suppressors	220
9.10	Targeting several steps of metastasis at once	222
<b>10</b>	<b>Angiogenesis</b>	<b>228</b>
10.1	The angiogenic switch	229
10.2	Cell behavior during angiogenic sprouting	234
10.3	Other means of tumor neovascularization	235
	⊙ Therapeutic strategies	236
10.4	Anti-angiogenic therapy	236
10.5	Vascular targeting by vascular disrupting agents	240
<b>11</b>	<b>Nutrient and hormone effects on the genome</b>	<b>245</b>
11.1	Introduction to food and cancer	245
11.2	Causative factors	248
11.3	Preventative factors: microconstituents of fruits and vegetables	253
11.4	Reprogramming energy metabolism in tumor cells—an emerging hallmark of cancer	258
11.5	Genetic polymorphisms and diet	262
11.6	Vitamin D: a link between nutrients and hormone action	264
11.7	Hormones and cancer	265
	⊙ Therapeutic strategies	269
11.8	“Enhanced” foods and dietary supplements for chemoprevention	269
11.9	Drugs that target energy pathways	270
11.10	Drugs that target estrogen	270
<b>12</b>	<b>Tumor immunology and immunotherapy</b>	<b>277</b>
12.1	Lymphocytes: B cells and T cells	278
12.2	The tumor suppressive roles of the immune system	279
12.3	Immune checkpoints	281
12.4	Cancer immunoediting and tumor promotion	284
12.5	Mechanisms of avoiding immune destruction	285
	⊙ Therapeutic strategies	286
12.6	Therapeutic antibodies	286
12.7	Cancer vaccines	287
12.8	Immune checkpoint blockades	293
12.9	Adoptive T-cell transfer, modified T-cell receptors, and chimeric antigen receptors	296
12.10	Oncolytic viruses and virotherapy	298

<b>13</b>	<b>Infectious agents and inflammation</b>	<b>302</b>
13.1	Identifying infectious agents as carcinogens	303
13.2	Inflammation and cancer	310
	© Therapeutic strategies	317
13.3	A national vaccination program against hepatitis B virus in Taiwan	317
13.4	Eradication of <i>H. pylori</i> and the relationship to prevention of gastric cancer	318
13.5	Cancer vaccines to prevent cervical cancer	318
13.6	Inhibition of inflammation	320
<b>14</b>	<b>Technology and drug and diagnostics development</b>	<b>326</b>
14.1	Microarrays and gene expression profiling	327
14.2	Analysis of biomarkers for diagnostics and prognostics	329
14.3	Studying gene function by CRISPR-Cas9	331
14.4	Imaging	332
14.5	Cancer nanotechnology	333
14.6	Strategies of drug development	335
14.7	Development of imatinib	339
14.8	Second- and third-generation therapeutics	340
14.9	Improved clinical trial design	342
14.10	Personalized medicine and bioinformatics	345
14.11	Are we making progress?	347
	APPENDIX 1: CELL CYCLE REGULATION	353
	GLOSSARY	354
	INDEX	365
