Part II Interaction of Other Components with Phytohormones 1

1	Interaction between Hormone and Redox Signaling in Plants: Divergent Pathways and Convergent Roles	3
	<i>Srivastava AK, Redij T, Sharma B, and Suprasanna P</i>	
1.1	Introduction	3
1.2	Redox-Hormone Crosstalk in Plants	4
1.3	Auxin	4
1.4	Abscisic Acid	9
1.5	Ethylene	11
1.6	Jasmonic Acid	11
1.7	Salicylic Acid	12
1.8	Brassinosteroids	14
1.9	Conclusion and Future Perspectives	15
	References	15
2	Redox Regulatory Networks in Response to Biotic Stress in Plants: A New Insight Through Chickpea-<i>Fusarium</i> Interplay	23
	<i>Anirban Bhar, Sumanti Gupta, Moniya Chatterjee, and Sampa Das</i>	
2.1	Introduction	23
2.2	Production and Scavenging of ROS: The Balance versus Perturbations	24
2.2.1	NADPH Oxidase, the Biological ROS Factory	24
2.2.2	Detoxification of ROS	25
2.3	Role of ROS in Plants: Ease and Disease	28
2.4	Reactive Oxygen Species Networks in Plants	28
2.4.1	Oxidative Sensors: Decoding of ROS Language	28
2.4.2	The Role of ROS in Cell Wall Fortification	29
2.4.3	The MAP Kinase Signaling Cascade: Relation to the Cellular Redox State	32
2.4.4	ROS, an Inducer in Plant Systemic Responses	33

2.5	ROS Signaling in Chickpea- <i>Fusarium</i> Interplay	34
2.6	Concluding Remarks	36
	Acknowledgments	37
	References	37
3	Ca²⁺, The Miracle Molecule in Plant Hormone Signaling During Abiotic Stress	45
	<i>Swatishmita Dhar Ray</i>	
3.1	Introduction	45
3.2	Intricacies of Hormonal Signaling in Abiotic Stress	46
3.3	Ca ²⁺ Regulated Hormonal Signaling	50
3.3.1	Calcium-Dependent Protein Kinase (CDPK/CPK)	50
3.3.2	Calcineurin B-Like Protein (CBL)-CBL-Interacting Protein Kinase (CIPK)	62
3.3.3	Ca ²⁺ Binding Protein Calmodulin (CAM), CAM-Like Protein (CML) and CAM-Binding Transcription Activator (CAMTA)	64
3.3.4	Ca ²⁺ /Calmodulin-Dependent Protein Kinase (CCaMK)	65
3.3.5	Ca ²⁺ /H ⁺ Antiporter (CAX)	66
3.3.6	Ca ²⁺ ATPase (ACA)	66
3.4	Calreticulin (CRT)	67
3.5	Conclusion	67
	Acknowledgment	68
	Abbreviations	68
	References	69
4	Phosphoglycerolipid Signaling in Response to Hormones Under Stress	91
	<i>Igor Pokotylo, Martin Janda, Tetiana Kalachova, Alain Zachowski, and Eric Ruelland</i>	
4.1	Main Players in Phosphoglycerolipid Signaling Machinery	91
4.1.1	Phosphoglycerolipid Signaling Pathways	91
4.1.2	Which Molecules Act as Mediators?	93
4.1.2.1	Targets of Phosphatidic Acid	93
4.1.2.2	Phosphoinositides	94
4.1.2.3	Diacylglycerol	96
4.1.2.4	Phosphorylated Inositols	96
4.1.2.5	Lysophosphoglycerolipids and Free Fatty Acids	96
4.2	Lipid Signaling, An Important Component of Plant Stress Responses	97
4.2.1	The Effect of Abiotic or Biotic Stresses on the Expression of Genes Encoding Enzymes of Lipid Signaling Machinery	97
4.2.2	The Effects of Abiotic Stresses on the Components of Lipid Signaling Machinery	99
4.2.2.1	Salt and Osmotic Stresses	99
4.2.2.2	Drought stress	100
4.2.2.3	Temperature Stress	101
4.2.2.4	Nutrient Deficiency and Toxic Metals	102
4.2.3	Effects of Biotic Stresses on Components of Lipid Signaling Machinery	102
4.3	Involvement of Phosphoglycerolipids in Phytohormone Signaling	104
4.3.1	Abscisic Acid	104

4.3.2	Salicylic Acid	107
4.3.3	Jasmonates	108
4.3.4	Ethylene	109
4.3.5	Auxins	109
4.3.6	Brassinosteroids	110
4.4	Stresses Can Affect Responses to Hormones by Altering Phosphoglycerolipid Machinery	111
4.5	Conclusion	113
	Acknowledgments	113
	References	113

5 The Role of the Plant Cytoskeleton in Phytohormone Signaling under Abiotic and Biotic Stresses 127

Yaroslav B. Blume, Yuliya A. Krasnylenko, and Alla I. Yemets

5.1	Introduction	127
5.2	Phytohormone-Mediated Perception of Abiotic Factors via the Cytoskeleton	131
5.2.1	Osmotic Stress and its Main Signaling Molecules Absciscic Acid and Ethylene: Interplay with the Cytoskeleton	131
5.2.1.1	Osmotic Stress	131
5.2.1.2	Osmotic Stress and Cytoskeleton	132
5.2.1.3	ABA and MTs	136
5.2.1.4	ABA and AFs	138
5.2.1.5	Ethylene and MTs	139
5.2.1.6	Ethylene and AFs	141
5.2.2	Microgravity and Mechanical Alterations Signal Transduction via Auxin and Brassinosteroids	142
5.2.2.1	Gravity	142
5.2.2.2	Mechanosensing	142
5.2.2.3	MTs as a Moving Force of Gravity Response	143
5.2.2.4	AFs and Gravity Response	143
5.2.2.5	Auxins as a Gravity Signal	144
5.2.2.6	Auxins and NO Interplay	144
5.2.2.7	Auxins and cGMP	145
5.2.2.8	Auxins and MTs	145
5.2.2.9	Auxins and AFs	147
5.2.2.10	Auxin and Brassinosteroid Interplay	150
5.2.2.11	Brassinosteroids and Cytoskeleton	150
5.2.3	Light Causes Cytoskeleton Rearrangement Mediated by Gibberellins	152
5.2.4	Cytoskeleton and Phytohormones as the Players of Common Signaling Cascades Under Extreme Temperatures	154
5.2.4.1	Cold and Phytohormones	155
5.2.4.2	Cold, MTs, and ABA	156
5.2.4.3	Cold, ABA, and AFs	158
5.2.4.4	Heat Shock Stress	158
5.2.4.5	Heat Shock-Induced Phytohormonal Imbalance	159
5.2.4.6	Hydrogen Peroxide (H ₂ O ₂) and Nitric Oxide (NO)	160

5.2.4.7	ROS	160
5.2.4.8	Heat and the Cytoskeleton	161
5.3	Cytoskeleton Regulation in Plant Interactions with Pathogens/Symbionts: Jasmonic and Salicylic Acids, and Strigolactones	162
5.3.1	Jasmonic Acid	164
5.3.2	Salicylic Acid	166
5.3.3	Strigolactones	167
5.4	Conclusions and Future Perspectives	169
	Acknowledgments	169
	Abbreviations	169
	References	170
6	Proteins in Phytohormone Signaling Pathways for Abiotic Stress in Plants	187
	<i>Sasikiran Reddy Sangireddy, Zhujiu Ye, Sarabjit Bhatti, Xiao Bo Pei, Muhammad Younas Khan Barozai, Theodore Thannhauser, and Suping Zhou</i>	
6.1	Introduction	187
6.2	Metabolic Pathways of Phytohormones and Stress-Induced Protein Expression Affecting their Biosynthesis Process	187
6.3	Proteins for Intra- and Inter-Cellular Transport of Phytohormones	190
6.4	Hormone Signaling Systems, Hormone Crosstalk, and Stress Responses	191
6.5	The Application of Proteomics in the Identification of Hormone Signaling Pathways	193
6.6	Conclusion and Prospective	194
	References	194
7	Perturbation and Disruption of Plant Hormone Signaling by Organic Xenobiotic Pollution	199
	<i>Anne-Antonella Serra, Diana Alberto, Fanny Ramel, Gwenola Gouesbet, Cécile Sulmon, and Ivan Couée</i>	
7.1	Introduction	199
7.2	Plant-Hormone-Interfering Naturally-Occurring Organic Compounds Play Important Roles in the Chemical Ecology of Plants	204
7.3	Transcriptome Profiling Reveals the Wide-Ranging Molecular Effects of Plant-Organic Xenobiotic Interactions	205
7.4	The Wide-Ranging Molecular Effects of Plant-Organic Xenobiotic Interactions Emphasize the Involvement of Regulatory Processes	206
7.5	Specifically Designed Organic Xenobiotics Directly Interact with Plant Hormone Systems	209
7.6	Organic Xenobiotics Can Cause Biological Effects that Interfere with Plant Hormone Dynamics and Signaling	210
7.7	The Diversity of Organic Xenobiotic Occurrences in Environmental Pollutions Can Induce Plant Hormone Perturbations in Non-Target Plant Communities	212
7.8	Conclusions and Perspectives	214
	Acknowledgments	214

Part III **Transcriptional Regulators of Phytohormones** 237

9 **Transcription Factors and Hormone-Mediated Mechanisms Regulate Stomata Development and Responses Under Abiotic Stresses: An Overview** 239

Marco Landi, Alice Basile, Marco Fambrini, and Claudio Pugliesi

9.1 Introduction 239

9.2 Stomata Development 240

9.2.1 The Transition from a Non-Differentiated Cell to GC Pair 240

9.2.2 The Positive Regulators from the Transition of a Non-Differentiated Cell to a GC Pair 241

9.2.3 Genetic Control of Stomatal Patterning 245

9.2.4 Additional Genes Involved in Stomatal Differentiation and Function 248

9.2.5 Regulation of Stomata Differentiation and Patterning via Phytohormones 250

9.2.6 Regulation of Stomata Differentiation and Patterning via Environmental Cues 252

9.3 Stomatal Response to Drought/Salinity and Waterlogging/Anoxia Constraints 253

9.3.1 Root-to-Shoot Communication 253

9.3.2 The Harsh Conditions Experienced by Plants in Mediterranean Environment: The Stomatal Responses to Drought and Salinity 253

9.3.2.1 Transcription Factors and Hormones Mediate Stomatal Response in Drought and Salinity Stresses 254

9.3.3 Waterlogging and Oxygen Shortage 258

9.4 Conclusions and Perspectives 262

Acknowledgments 264
