<i>Preface</i>	<i>xi</i>
<i>About the front cover</i>	<i>xiii</i>
<i>Symbols and abbreviations</i>	<i>xv</i>
1 Introduction to dynamic systems	1
1.1 <i>What is dynamics and why is it important?</i> 1	
1.1.1 <i>Why dynamics matters</i> 2	
1.1.1.1 <i>The Tacoma Narrows Bridge</i> 2	
1.1.1.2 <i>The Northridge and Kobe Earthquakes</i> 3	
1.1.1.3 <i>The London Millennium Bridge</i> 5	
1.2 <i>Basic definitions</i> 6	
1.3 <i>Describing oscillatory motion</i> 7	
1.3.1 <i>Time and frequency domains</i> 7	
1.3.2 <i>The basics of harmonic motion</i> 8	
1.3.3 <i>Phasors</i> 12	
1.3.4 <i>Some everyday examples of harmonic motion</i> 13	
1.3.4.1 <i>Pendulum</i> 13	
1.3.4.2 <i>Bobbing in water</i> 13	
1.4 <i>Dynamic properties of physical systems</i> 14	
1.4.1 <i>Mass and stiffness</i> 14	
1.4.2 <i>Damping</i> 15	
1.4.3 <i>Modelling physical systems for dynamic analysis</i> 17	
1.5 <i>Dynamic loads</i> 19	
1.5.1 <i>Impulsive loads</i> 19	
1.5.2 <i>Periodic loads</i> 20	
1.5.3 <i>Random loads</i> 22	
<i>Key points</i> 24	
<i>Tutorial problems</i> 24	

2 Single-degree-of-freedom systems	27
2.1 <i>Introduction</i>	27
2.2 <i>Equation of motion</i>	27
2.2.1 <i>With an applied force</i>	27
2.2.2 <i>With a ground motion</i>	29
2.3 <i>Free vibration</i>	30
2.3.1 <i>Undamped free vibration</i>	31
2.3.2 <i>Damped free vibration</i>	33
2.3.2.1 <i>Critically damped: $\xi = 1$ (or $c^2 = 4 km$)</i>	34
2.3.2.2 <i>Underdamped: $\xi < 1$ (or $c^2 < 4 km$)</i>	35
2.3.2.3 <i>Overdamped: $\xi > 1$ (or $c^2 > 4 km$)</i>	36
2.3.2.4 <i>Logarithmic decrement</i>	36
2.4 <i>Response to dynamic loads</i>	37
2.4.1 <i>Step load</i>	38
2.4.2 <i>Harmonic load</i>	40
2.4.3 <i>Harmonic base motion</i>	45
2.4.4 <i>Response to periodic loads</i>	49
2.4.5 <i>Impulse response</i>	52
2.4.6 <i>Response to irregular dynamic loads</i>	54
2.4.7 <i>Earthquake response spectrum</i>	59
2.5 <i>Transfer functions and block diagrams</i>	64
2.5.1 <i>Laplace transforms</i>	65
2.5.2 <i>Transfer function of a linear SDOF system</i>	66
2.5.3 <i>Relationship to impulse response</i>	68
Key points	69
Tutorial problems	69

3 Multi-degree-of-freedom systems	73
3.1 <i>Introduction</i>	73
3.2 <i>Equations of motion</i>	74
3.2.1 <i>MDOF systems with dynamic forces</i>	74
3.2.2 <i>MDOF systems subjected to base motions</i>	77
3.2.3 <i>Some comments on MDOF equations of motion</i>	79
3.3 <i>Free vibration of MDOF systems</i>	80
3.3.1 <i>Natural frequencies and mode shapes</i>	80
3.3.2 <i>Properties of mode shapes</i>	86
3.3.3 <i>Empirical methods</i>	88
3.4 <i>Vibration analysis of 2DOF systems</i>	89
3.4.1 <i>Equivalence between 2DOF and two SDOF systems</i>	89
3.4.2 <i>Undamped response to a harmonic load</i>	92
3.4.3 <i>Tuned mass dampers</i>	94
3.5 <i>Response of MDOF systems to dynamic loads</i>	96
3.5.1 <i>Mode superposition method: theory</i>	96
3.5.2 <i>Modelling damping in MDOF systems</i>	97

3.5.2.1	<i>Modal damping</i>	98
3.5.2.2	<i>Rayleigh damping</i>	98
3.5.2.3	<i>Other damping formulations</i>	99
3.5.3	<i>Implementing the mode superposition method</i>	100
3.5.4	<i>Mode superposition for MDOF systems with base motions</i>	104
3.5.5	<i>Truncation of modes</i>	106
3.5.6	<i>Mode superposition and response spectrum analysis</i>	111

Key points 113

Tutorial problems 113

4 Continuous systems	117
-----------------------------	------------

4.1	<i>Introduction</i>	117
4.2	<i>Vibrations of beams</i>	117
4.2.1	<i>Undamped equation of motion</i>	117
4.2.2	<i>Undamped free vibration of uniform beams</i>	119
4.2.3	<i>Forced vibration response</i>	124
4.3	<i>Equivalent single-degree-of-freedom systems</i>	128
4.3.1	<i>Generalised properties</i>	128
4.3.2	<i>Response to applied loads</i>	133
4.3.3	<i>Response to a base motion</i>	135

Key points 138

Tutorial problems 139

5 Non-linear dynamics	141
------------------------------	------------

5.1	<i>Introduction</i>	141
5.2	<i>Non-linearity in structural properties</i>	142
5.2.1	<i>Variable mass</i>	142
5.2.2	<i>Non-proportional damping</i>	142
5.2.3	<i>Non-linear stiffness</i>	147
5.2.3.1	<i>Elastic-perfectly plastic hysteresis</i>	149
5.2.3.2	<i>A bilinear stiffness model</i>	150
5.2.4	<i>Geometric non-linearity</i>	152
5.2.5	<i>Dynamic characteristics of non-linear systems</i>	156
5.3	<i>Time-stepping algorithms</i>	158
5.3.1	<i>The need for a different approach</i>	158
5.3.2	<i>A simple algorithm: the central difference method</i>	159
5.3.3	<i>Stability, accuracy and time step</i>	165
5.3.3.1	<i>Accuracy</i>	165
5.3.3.2	<i>Stability</i>	167
5.3.4	<i>A more complex algorithm: the Newmark method</i>	169
5.3.5	<i>Extension to MDOF systems</i>	171
5.3.5.1	<i>Damping</i>	171
5.3.5.2	<i>Stability, accuracy and time step</i>	172
5.3.6	<i>How many non-linear analyses?</i>	172

5.4	<i>Approximate treatment of non-linearity</i>	174
5.4.1	<i>Ductility-modified spectra</i>	174
5.4.2	<i>Application to strain hardening and MDOF structures</i>	179
	<i>Key points</i>	181
	<i>Tutorial problems</i>	181
6	Fourier analysis and random vibrations	183
6.1	<i>Introduction</i>	183
6.2	<i>Properties of random variables and processes</i>	184
6.2.1	<i>Deterministic and random variables</i>	184
6.2.2	<i>Discrete and continuous random variables</i>	184
6.2.3	<i>Statistical properties of random variables</i>	187
6.2.4	<i>Two random variables</i>	188
6.2.5	<i>Properties of random processes</i>	189
6.3	<i>Autocorrelation</i>	191
6.3.1	<i>Convolution integral</i>	191
6.3.2	<i>Autocorrelation function</i>	192
6.4	<i>Fourier analysis</i>	197
6.4.1	<i>Fourier transform</i>	197
6.4.2	<i>Properties of Fourier transforms</i>	200
6.4.3	<i>The Dirac delta function</i>	200
6.4.4	<i>Practical use of Fourier transforms</i>	202
6.5	<i>Power spectral density</i>	203
6.5.1	<i>White noise</i>	206
6.6	<i>Impulse response and transfer function</i>	208
6.6.1	<i>Impulse response function</i>	208
6.6.2	<i>Transfer function</i>	211
6.6.3	<i>Application to random vibration analysis</i>	212
6.6.4	<i>Modal testing</i>	214
	<i>Key points</i>	215
	<i>Tutorial problems</i>	216

APPENDICES**Background mathematics****219**

<i>Appendix A: Basic trigonometry and the complex exponential</i>	221
<i>Appendix B: Second order ordinary differential equations</i>	223
<i>Appendix C: Fourier analysis</i>	229
<i>Appendix D: Laplace transforms</i>	235
<i>Appendix E: Eigenvalues and eigenvectors of matrices</i>	241
<i>Appendix F: Partial differential equations</i>	245
<i>Appendix G: Tutorial problems: answers and hints</i>	249
<i>Further reading</i>	255
<i>Index</i>	259
