About the Author xxii

Chapter 1 Introduction to Statistics 1

1.1 What Is Statistics? 1

1.2 Why Learn Statistics? 1

1.3 Introduction to the Stages of the Research Process 2

Developing a Research Hypothesis to Be Tested 3

Collecting Data 8

Analyzing the Data 15

Drawing a Conclusion Regarding the Research Hypothesis 16

Communicating the Findings of the Study 17

1.4 Plan of the Book 17

1.5 Looking Ahead 18

1.6 Summary 18

1.7 Important Terms 19

1.8 Exercises 20

Chapter 2 Examining Data: Tables and Figures 24

2.1 An Example From the Research: Winning the Lottery 24

2.2 Why Examine Data? 25

Gaining an Initial Sense of the Data 26

Detecting Data Coding or Data Entry Errors 27

Identifying Outliers 27

Evaluating Research Methodology 27

Determining Whether Data Meet Statistical Criteria and Assumptions 27

2.3 Examining Data Using Tables 28

What Are the Values of the Variable? 28

How Many Participants in the Sample Have Each Value of the Variable? 28

What Percentage of the Sample Has Each Value of the Variable? 29

2.4 Grouped Frequency Distribution Tables 31

Cumulative Percentages 32

2.5 Examining Data Using Figures 34

Displaying Nominal and Ordinal Variables: Bar Charts and Pie Charts 35

Displaying Interval and Ratio Variables:

Histograms and Frequency Polygons 36

Drawing Inappropriate Conclusions From Figures 39

2.6 Examining Data: Describing Distributions	42
Modality	42
Symmetry	42
Variability	44
2.7 Looking Ahead	46
2.8 Summary	46
2.9 Important Terms	47
2.10 Formulas Introduced in This Chapter	47
2.11 Using IBM® SPSS® Software	47
2.12 Exercises	53

Chapter 3 Measures of Central Tendency 70

3.1 An Example From the Research: The 10% Myth	70
3.2 Understanding Central Tendency	73
3.3 The Mode	74
Determining the Mode	74
3.4 The Median	74
Calculating the Median: Odd Number of Scores	74
Calculating the Median: Even Number of Scores	76
Calculating the Median When Multiple Scores Have the Median Value	78
3.5 The Mean	80
Calculating the Mean	80
Calculating the Mean From Frequency Distribution Tables	82
The Mean as a Balancing Point in a Distribution	83
The Sample Mean vs. the Population Mean: Statistics vs. Parameters	86
3.6 Comparison of the Mode, Median, and Mean	86
Strengths and Weaknesses of the Mode	87
Strengths and Weaknesses of the Median	88
Strengths and Weaknesses of the Mean	91
Choosing a Particular Measure of Central Tendency	92
3.7 Measures of Central Tendency: Drawing Conclusions	93
3.8 Looking Ahead	95
3.9 Summary	96
3.10 Important Terms	96
3.11 Formulas Introduced in This Chapter	96
3.12 Exercises	97

Chapter 4 Measures of Variability 104

4.1 An Example From the Research: How Many “Sometimes” in an “Always”?	104
4.2 Understanding Variability	106
4.3 The Range	108

Strengths and Weaknesses of the Range	110
4.4 The Interquartile Range	110
Strengths and Weaknesses of the Interquartile Range	112
4.5 The Variance (s^2)	112
Definitional Formula for the Variance	114
Computational Formula for the Variance	116
Why Not Use the Absolute Value of the Deviation in Calculating the Variance?	119
Why Divide by $N - 1$ Rather Than N in Calculating the Variance?	120
4.6 The Standard Deviation (s)	120
Definitional Formula for the Standard Deviation	120
Computational Formula for the Standard Deviation	122
4.7 Measures of Variability for Populations	124
The Population Variance (σ^2)	124
The Population Standard Deviation (σ)	124
Measures of Variability for Samples vs. Populations	125
4.8 Measures of Variability: Drawing Conclusions	126
4.9 Looking Ahead	126
4.10 Summary	127
4.11 Important Terms	128
4.12 Formulas Introduced in This Chapter	128
4.13 Using SPSS	129
4.14 Exercises	131

Chapter 5 Normal Distributions 139

5.1 Example: SAT Scores	139
5.2 Normal Distributions	139
What Are Normal Distributions?	140
Why Are Normal Distributions Important?	140
Is There Only One Normal Distribution?	141
5.3 The Standard Normal Distribution	142
What Is the Standard Normal Distribution?	143
Interpreting z-Scores: Distance From the Mean	143
Interpreting z-Scores: Relative Position Within the Distribution	144
5.4 Applying z-Scores to Normal Distributions	150
Transforming Normal Distributions Into the Standard Normal Distribution	151
Understanding the z-Score Formula	152
Example: Transforming SAT Scores Into z-Scores	153
Interpreting z-Scores: Distance From the Mean	153
Interpreting z-Scores: Relative Position Within Distribution	153
Transforming Scores Into z-Scores: Drawing Conclusions	156
5.5 Standardizing Frequency Distributions	157
Example: Measuring Politicians' Behavior	158
Standardizing a Frequency Distribution	160

Interpreting Standardized Scores	160
Using Standardized Scores to Compare or Combine Variables	162
Characteristics of Standardized Distributions	162
When Can You Apply the Normal Curve Table to a Standardized Distribution?	164
5.6 Looking Ahead	166
5.7 Summary	166
5.8 Important Terms	167
5.9 Formulas Introduced in This Chapter	167
5.10 Exercises	167

Chapter 6 Probability and Introduction to Hypothesis Testing 175

6.1 A Brief Introduction to Probability	175
What Is Probability?	176
Why Is Probability Important to Researchers?	177
Applying Probability to Normal Distributions	177
Applying Probability to Binomial Distributions	178
6.2 Example: Making Heads or Tails of the Super Bowl	181
6.3 Introduction to Hypothesis Testing	184
State the Null and Alternative Hypotheses (H_0 and H_1)	184
Make a Decision About the Null Hypothesis	186
Draw a Conclusion From the Analysis	192
Relate the Result of the Analysis to the Research Hypothesis	192
Summary of Steps in Hypothesis Testing	192
6.4 Issues Related to Hypothesis Testing: An Introduction	195
The Issue of “Proof” in Hypothesis Testing	195
Errors in Decision Making	195
Factors Influencing the Decision About the Null Hypothesis	196
6.5 Looking Ahead	201
6.6 Summary	204
6.7 Important Terms	206
6.8 Formulas Introduced in This Chapter	206
6.9 Exercises	206

Chapter 7 Testing One Sample Mean 214

7.1 An Example From the Research: Do You Read Me?	214
7.2 The Sampling Distribution of the Mean	218
Characteristics of the Sampling Distribution of the Mean	219
7.3 Inferential Statistics: Testing One Sample Mean (σ Known)	221
State the Null and Alternative Hypotheses (H_0 and H_1)	221
Make a Decision About the Null Hypothesis	222

Draw a Conclusion From the Analysis 229
Relate the Result of the Analysis to the Research Hypothesis 230
Assumptions of the z-Test for One Mean 231
Summary 232

7.4 A Second Example From the Research: Unique
Invulnerability 234

7.5 Introduction to the t -Distribution 236
Characteristics of the Student t -Distribution 237

7.6 Inferential Statistics: Testing
One Sample Mean (σ Not Known) 239
State the Null and Alternative Hypotheses (H_0 and H_1) 239
Make a Decision About the Null Hypothesis 239
Draw a Conclusion From the Analysis 246
Relate the Result of the Analysis to the Research Hypothesis 246
Assumptions of the t -Test for One Mean 246
Summary 247

7.7 Factors Affecting the Decision About the Null
Hypothesis 248
Sample Size 249
Alpha (α) 250
Directionality of the Alternative Hypothesis 250

7.8 Looking Ahead 253

7.9 Summary 253

7.10 Important Terms 254

7.11 Formulas Introduced in This Chapter 254

7.12 Using SPSS 255

7.13 Exercises 257

Chapter 8 Estimating the Mean of a Population 271

8.1 An Example From the Research: Salary Survey 271

8.2 Introduction to the Confidence Interval for the Mean 273
Using the Sampling Distribution of the Mean to Create the Confidence Interval
for the Mean 275

8.3 The Confidence Interval for the Mean (σ Not Known) 276
State the Desired Level of Confidence 276
Calculate the Confidence Interval and Confidence Limits 277
Draw a Conclusion About the Confidence Interval 279
Summary 282

8.4 The Confidence Interval for the Mean (σ Known) 284
State the Desired Level of Confidence 284
Calculate the Confidence Interval and Confidence Limits 284
Draw a Conclusion About the Confidence Interval 286
Summary 286

8.5 Factors Affecting the Width of the
Confidence Interval for the Mean 286

- Sample Size 288
- Level of Confidence 291
- 8.6 Interval Estimation and Hypothesis Testing 295
 - Concerns About Hypothesis Testing 296
 - Interval Estimation as an Alternative to Hypothesis Testing 297
- 8.7 Looking Ahead 298
- 8.8 Summary 299
- 8.9 Important Terms 299
- 8.10 Formulas Introduced in This Chapter 299
- 8.11 Using SPSS 300
- 8.12 Exercises 302

Chapter 9 Testing the Difference Between Two Means 312

- 9.1 An Example From the Research: You Can Just Wait 312
- 9.2 The Sampling Distribution of the Difference 317
 - Characteristics of the Sampling Distribution of the Difference 318
- 9.3 Inferential Statistics: Testing the Difference Between Two Sample Means 319
 - State the Null and Alternative Hypotheses (H_0 and H_1) 320
 - Make a Decision About the Null Hypothesis 320
 - Draw a Conclusion From the Analysis 326
 - Relate the Result of the Analysis to the Research Hypothesis 327
 - Assumptions of the t -Test for Independent Means 327
 - Summary 331
- 9.4 Inferential Statistics: Testing the Difference Between Two Sample Means (Unequal Sample Sizes) 331
 - An Example From the Research: Kids' Motor Skills and Fitness 331
 - Inferential Statistics: Testing the Difference Between Two Sample Means (Unequal Sample Sizes) 332
 - Assumptions of the t -Test for Independent Means (Unequal Sample Sizes) 338
 - Summary 338
- 9.5 Inferential Statistics: Testing the Difference Between Paired Means 340
 - Research Situations Appropriate for Within-Subjects Research Designs 341
 - An Example From the Research: Web-Based Family Interventions 341
 - Inferential Statistics: Testing the Difference Between Paired Means 342
 - Assumptions of the t -Test for Dependent Means 350
 - Summary 350
- 9.6 Looking Ahead 352
- 9.7 Summary 353
- 9.8 Important Terms 353
- 9.9 Formulas Introduced in This Chapter 354

9.10 Using SPSS 354

9.11 Exercises 359

Chapter 10 Errors in Hypothesis Testing, Statistical Power, and Effect Size 377

10.1 Hypothesis Testing vs. Criminal Trials 377

10.2 An Example From the Research: Truth or Consequences 379

Correct Decisions and Mistakes in Criminal Trials 379

10.3 Two Errors in Hypothesis Testing: Type I and Type II Error 381

Type I Error: The Risk in Rejecting the Null Hypothesis 381

Type II Error: The Risk in Not Rejecting the Null Hypothesis 385

Type I and Type II Error: Summary 387

10.4 Controlling Type I and Type II Error 389

Controlling Type I Error 389

Controlling Type II Error 392

Controlling Type I and Type II Error: Summary 399

10.5 Measures of Effect Size 401

Interpreting Inferential Statistics: The Influence of Sample Size 401

The Inappropriateness of “Highly Significant” 402

Effect Size as Variance Accounted for 404

Measure of Effect Size for the Difference Between Two Sample Means: r^2 405

Interpreting Measures of Effect Size 405

Presenting Measures of Effect Size 406

Reasons for Calculating Measures of Effect Size 406

A Second Measure of Effect Size for the Difference Between Two Sample Means: Cohen's d 407

10.6 Looking Ahead 409

10.7 Summary 410

10.8 Important Terms 411

10.9 Formulas Introduced in This Chapter 411

10.10 Exercises 411

Chapter 11 One-Way Analysis of Variance (ANOVA) 421

11.1 An Example From the Research: It's Your Move 421

11.2 Introduction to Analysis of Variance (ANOVA) 425

Review: Testing the Difference Between the Means of Two Samples 425

Introduction to Analysis of Variance (ANOVA) and the F -Ratio 429

11.3 Inferential Statistics: One-Way Analysis of Variance (ANOVA) 431

State the Null and Alternative Hypotheses (H_0 and H_1) 431

Make a Decision About the Null Hypothesis 432

Draw a Conclusion From the Analysis 443

- Relate the Result of the Analysis to the Research Hypothesis 444
- Summary 444
- 11.4 A Second Example: The Parking Lot Study Revisited 447
 - State the Null and Alternative Hypotheses (H_0 and H_1) 448
 - Make a Decision About the Null Hypothesis 448
 - Draw a Conclusion From the Analysis 452
 - The Relationship Between the t -Test and the F -Ratio 452
- 11.5 Analytical Comparisons Within the One-Way ANOVA 452
 - Planned Versus Unplanned Comparisons 453
 - Between-Group and Within-Group Variance in Analytical Comparisons 453
 - Conducting Planned Comparisons 454
 - Conducting Unplanned Comparisons 458
- 11.6 Looking Ahead 465
- 11.7 Summary 465
- 11.8 Important Terms 466
- 11.9 Formulas Introduced in This Chapter 466
- 11.10 Using SPSS 468
- 11.11 Exercises 471

Chapter 12 Two-Way Analysis of Variance (ANOVA) 486

- 12.1 An Example From the Research: Vote—or Else! 486
- 12.2 Introduction to Factorial Research Designs 488
 - Testing Interaction Effects 489
 - Testing Main Effects 494
 - The Relationship Between Main Effects and Interaction Effects 495
 - Factorial Designs vs. Single-Factor Designs: Advantages and Disadvantages 498
- 12.3 The Two-Factor ($A \times B$) Research Design 502
 - Notational System for Components of the Two-Factor Research Design 502
 - Analyzing the Two-Factor Research Design: Descriptive Statistics 502
- 12.4 Introduction to Analysis of Variance (ANOVA) for the Two-Factor Research Design 506
 - F -Ratios in the Two-Factor Research Design 507
- 12.5 Inferential Statistics: Two-Way Analysis of Variance (ANOVA) 508
 - State the Null and Alternative Hypotheses (H_0 and H_1) 508
 - Make Decisions About the Null Hypotheses 509
 - Draw Conclusions From the Analyses 526
 - Relate the Results of the Analyses to the Research Hypothesis 526
- 12.6 Investigating a Significant $A \times B$ Interaction Effect: Analysis of Simple Effects 531
- 12.7 Looking Ahead 533
- 12.8 Summary 534

- 12.9 Important Terms 535
- 12.10 Formulas Introduced in This Chapter 535
- 12.11 Using SPSS 537
- 12.12 Exercises 540

Chapter 13 Correlation and Linear Regression 570

- 13.1 An Example From the Research: Snap Judgment 570
- 13.2 Introduction to the Concept of Correlation 574
 - Describing the Relationship Between Variables 574
 - Measuring the Relationship Between Variables: Correlational Statistics 578
- 13.3 Inferential Statistics: Pearson Correlation Coefficient 582
 - State the Null and Alternative Hypotheses (H_0 and H_1) 582
 - Make a Decision About the Null Hypothesis 583
 - Draw a Conclusion From the Analysis 592
 - Relate the Result of the Analysis to the Research Hypothesis 592
 - A Computational Formula for the Pearson r 592
- 13.4 Predicting One Variable From Another: Linear Regression 600
 - The Linear Regression Equation 603
 - Calculating the Linear Regression Equation 603
 - Drawing the Linear Regression Equation 605
 - A Second Example: Put Down Your Pencils 607
- 13.5 Correlating Two Sets of Ranks: The Spearman Rank-Order Correlation 610
 - Introduction to Ranked Variables 611
 - An Example From the Research: Do Students and Teachers Think Alike? 611
 - Inferential Statistics: The Spearman Rank-Order Correlation Coefficient 612
- 13.6 Correlational Statistics vs. Correlational Research 617
 - Does ANOVA = Causality? 621
 - “Correlation Is Not Causality”—What Does That Mean? 621
- 13.7 Looking Ahead 622
- 13.8 Summary 622
- 13.9 Important Terms 624
- 13.10 Formulas Introduced in This Chapter 624
- 13.11 Using SPSS 626
- 13.12 Exercises 631

Chapter 14 Chi-Square 648

- 14.1 An Example From the Research (One Categorical Variable): Are You My Type? 648
- 14.2 Introduction to the Chi-Square Statistic 651
 - Observed and Expected Frequencies 652
 - Characteristics of the Distribution of Chi-Square Statistics 654
 - Assumptions Underlying the Chi-Square Statistic 654

14.3 Inferential Statistic: Chi-Square Goodness-of-Fit Test	655
State the Null and Alternative Hypotheses (H_0 and H_1)	657
Make a Decision About the Null Hypothesis	657
Draw a Conclusion From the Analysis	663
Relate the Result of the Analysis to the Research Hypothesis	664
Conducting the Chi-Square Goodness-of-Fit Test With Unequal Hypothesized Proportions	666
14.4 An Example From the Research (Two Categorical Variables): Seeing Red	669
14.5 Inferential Statistic: Chi-Square Test of Independence	674
State the Null and Alternative Hypotheses (H_0 and H_1)	675
Make a Decision About the Null Hypothesis	675
Draw a Conclusion From the Analysis	679
Relate the Result of the Analysis to the Research Hypothesis	680
14.6 Parametric and Nonparametric Statistical Tests	682
Parametric vs. Nonparametric Statistical Tests	682
Reasons for Using Nonparametric Statistical Tests	685
Examples of Nonparametric Statistical Tests	685
14.7 Looking Ahead	686
14.8 Summary	687
14.9 Important Terms	687
14.10 Formulas Introduced in This Chapter	688
14.11 Using SPSS	688
14.12 Exercises	695
