<b>Preface</b>	v
<b>Symbols and Abbreviations</b>	xvii
<b>Part I. Basics of Solar Cells and Materials Demands</b>	<b>1</b>
<b>1. Basic Characteristics and Characterization of Solar Cells</b>	<b>3</b>
1.1 Solar Radiation and Two Fundamental Functions of a Solar Cell . . . . .	3
1.2 Basic Characteristics of a Solar Cell . . . . .	8
1.3 Ideal Solar Cell Under Illumination . . . . .	10
1.3.1 Diode equation of the ideal solar cell . . . . .	10
1.3.2 Open-circuit voltage and diode saturation current . . . . .	12
1.3.3 Dependence of the fill factor on the short-circuit current density . . . . .	14
1.3.4 Dependence of the efficiency of an ideal solar cell on the light intensity . . . . .	14
1.4 Real Solar Cells: Consideration of Series and Parallel Resistances . . . . .	16
1.4.1 Resistive losses and tolerable series and parallel resistances . . . . .	16
1.4.2 Influence of series and parallel resistances on the basic characteristics of a solar cell . . . . .	18
1.4.3 Influence of series and parallel resistances on the intensity dependence of the basic characteristics of a solar cell . . . . .	21

1.5	Characterization of Solar Cells . . . . .	23
1.5.1	$I_{SC}$ – $V_{OC}$ characteristics and ideality factor . . . . .	23
1.5.2	Temperature-dependent diode saturation current and activation energy . . . . .	25
1.5.3	Measurement of $I$ – $V$ characteristics with loads . . . . .	27
1.5.4	Measurement of the solar energy conversion efficiency with a pyranometer . . . . .	32
1.5.5	Measurement of the solar energy conversion efficiency with a sun simulator . . . . .	34
1.5.6	Spectral dependence of the quantum efficiency . . . . .	36
1.6	Summary . . . . .	39
1.7	Tasks . . . . .	42
<b>2.</b>	<b>Photocurrent Generation and the Origin of Photovoltage</b>	<b>45</b>
2.1	Energy Gap of Photovoltaic Absorbers . . . . .	45
2.1.1	Light absorption and band gap of photovoltaic absorbers . . . . .	45
2.1.2	Photon flux and maximum photocurrent of solar cells . . . . .	48
2.1.3	The ultimate efficiency of solar cells . . . . .	51
2.2	Photocurrent Limitation by Reflectivity and Transmission of Light . . . . .	52
2.2.1	Reflectivity and antireflection coatings . . . . .	52
2.2.2	Absorption coefficient and transmission losses . . . . .	54
2.2.3	Increase of the optical path by light trapping . . . . .	57
2.3	Free Charge Carriers in Ideal Semiconductors . . . . .	61
2.3.1	Densities of free charge carriers and Fermi-energy . . . . .	61
2.3.2	Thermal equilibrium and density of intrinsic charge carriers . . . . .	66
2.3.3	Doping, majority and minority equilibrium charge carriers . . . . .	68
2.3.4	Fermi-level splitting for photogenerated charge carriers . . . . .	72
2.4	Summary . . . . .	76
2.5	Tasks . . . . .	78

<b>3. Influence of Recombination on the Minimum Lifetime</b>	<b>81</b>
3.1 Minimum Lifetime . . . . .	81
3.1.1 Decay of photocurrent, recombination rate and lifetime . . . . .	81
3.1.2 Diffusion length and lifetime . . . . .	83
3.1.3 Minimum lifetime condition for PV absorbers . . . . .	84
3.2 Radiative Recombination . . . . .	86
3.3 Auger Recombination . . . . .	88
3.4 Shockley–Read–Hall Recombination . . . . .	91
3.4.1 Elementary processes at a trap state . . . . .	91
3.4.2 Emission and capture rates of electrons and holes . . . . .	92
3.4.3 Minimum Shockley–Read–Hall recombination lifetime . . . . .	94
3.4.4 Shockley–Read–Hall recombination rate . . . . .	95
3.4.5 Strategies for minimizing Shockley–Read–Hall recombination . . . . .	97
3.5 Surface Recombination . . . . .	99
3.5.1 Surface recombination velocity . . . . .	99
3.5.2 Surface recombination lifetime . . . . .	102
3.5.3 Strategies for minimizing surface recombination . . . . .	103
3.6 Summary . . . . .	107
3.7 Tasks . . . . .	109
<b>4. Charge Separation Across <math>pn</math>-Junctions</b>	<b>111</b>
4.1 Concept of the Ideal Charge-Selective Contact . . . . .	112
4.2 The Ideal Semi-infinite $pn$ -Junction in Thermal Equilibrium . . . . .	113
4.2.1 Formation of a $pn$ -junction . . . . .	113
4.2.2 Space charge regions of a $pn$ -junction . . . . .	115
4.2.3 Diffusion potential of a $pn$ -junction . . . . .	120
4.3 Collection of Photogenerated Charge Carriers at a $pn$ -Junction . . . . .	123
4.3.1 $pn$ -Junction as an ideal charge-selective electron and hole contact . . . . .	123

4.3.2	Charge carriers photogenerated in a space charge region . . . . .	125
4.3.3	Charge carriers photogenerated in a neutral region . . . . .	126
4.4	Diode Saturation Current Density of a <i>pn</i> -Junction . . . . .	129
4.4.1	Fermi-level splitting and density of minority charge carriers . . . . .	129
4.4.2	Diode saturation current density of a semi-infinite <i>pn</i> -junction . . . . .	131
4.4.3	Shockley–Read–Hall recombination in a <i>pn</i> -junction . . . . .	134
4.4.4	The two-diode model of an illuminated <i>pn</i> -junction . . . . .	136
4.4.5	Consideration of surface recombination . . . . .	139
4.4.6	The way to very high efficiencies of solar cells . . . . .	142
4.5	Summary . . . . .	145
4.6	Tasks . . . . .	147
<b>5.</b>	<b>Ohmic Contacts for Solar Cells</b>	<b>149</b>
5.1	Concept of Ideal Ohmic Contacts . . . . .	149
5.2	Ohmic Metal–Semiconductor Contacts . . . . .	153
5.2.1	Work function, electron affinity and ionization energy . . . . .	153
5.2.2	Formation of metal–semiconductor contacts . . . . .	154
5.2.3	Fermi-level pinning at metal–semiconductor contacts . . . . .	157
5.3	Tunneling Ohmic Contacts . . . . .	163
5.3.1	Tunneling at metal–semiconductor contacts . . . . .	163
5.3.2	Transmission probability of a tunneling barrier . . . . .	165
5.3.3	Contact resistance of a triangular tunneling barrier . . . . .	169
5.3.4	Tunneling resistance at degenerated <i>pn</i> -heterojunctions . . . . .	171
5.3.5	Tunneling via defect states near metal–semiconductor contacts . . . . .	174

5.4	Summary . . . . .	177
5.5	Tasks . . . . .	179
<b>6.</b>	<b>Maximum Efficiency of Solar Cells</b>	<b>183</b>
6.1	Diode Equation of the Ideal Single-Junction Solar Cell . . . . .	183
6.1.1	Thermal generation and radiative recombination rate constant . . . . .	183
6.1.2	Radiative recombination rate of an illuminated ideal absorber . . . . .	185
6.1.3	Diode saturation current of an ideal single-junction solar cell . . . . .	187
6.2	Maximum Efficiency of Ideal Single-Junction Solar Cells . . . . .	189
6.2.1	The Shockley–Queisser limit of solar energy conversion efficiency . . . . .	189
6.2.2	Role of temperature and concentrated sunlight . . . . .	193
6.2.3	Thermalization losses . . . . .	194
6.3	Multi-Junction Solar Cells . . . . .	196
6.3.1	Spectral splitting for reduction of thermalization losses . . . . .	196
6.3.2	Current-matching condition and optimum band gaps . . . . .	198
6.3.3	Dependence of the efficiency on the number of band gaps . . . . .	201
6.4	Alternative Concepts for Increasing the Efficiency . . . . .	206
6.4.1	Increased quantum efficiency with higher energetic photons . . . . .	206
6.4.2	Up-conversion of lower energetic photons . . . . .	209
6.5	Summary . . . . .	211
6.6	Tasks . . . . .	214
<b>Part II.</b>	<b>Materials Specific Concepts</b>	<b>217</b>
<b>7.</b>	<b>Solar Cells Based on Crystalline Si</b>	<b>219</b>
7.1	Principle Architecture of c-Si Solar Cells and Resistive Losses . . . . .	220

7.1.1	Base and emitter of conventional c-Si solar cells . . . . .	220
7.1.2	Front-contact finger grid and emitter resistance . . . . .	222
7.1.3	Minimization of shading caused by the front-contact finger grid . . . . .	225
7.1.4	Resistances at emitter and base contacts . . . . .	228
7.1.5	Connection of c-Si solar cells in PV modules and role of silver . . . . .	230
7.2	Homogeneously Doped c-Si Wafers with Low Density of Defects . . . . .	231
7.2.1	Siemens process of very pure polycrystalline silicon . . . . .	232
7.2.2	Methods of c-Si crystal growth with liquid–solid interfaces . . . . .	233
7.2.3	Homogeneous doping of large silicon crystals . . . . .	236
7.2.4	Refinement of silicon crystals by segregation . . . . .	241
7.2.5	Wafering of c-Si crystals . . . . .	242
7.3	Formation of the Emitter . . . . .	245
7.3.1	Diffusion from inexhaustible and exhaustible sources . . . . .	245
7.3.2	Laser-assisted doping and ion implantation of the emitter . . . . .	250
7.3.3	Amorphous silicon emitter . . . . .	253
7.4	Passivation and Structuring of c-Si Surfaces . . . . .	255
7.4.1	Cleaning and structuring of silicon surfaces by etching . . . . .	255
7.4.2	The c-Si/SiO <sub>2</sub> interface . . . . .	257
7.4.3	Hydrogen passivation of silicon dangling bonds . . . . .	260
7.4.4	Passivation with c-Si/SiN <sub>x</sub> :H and c-Si/a-Si:H interfaces . . . . .	262
7.4.5	The c-Si/Al <sub>2</sub> O <sub>3</sub> interface . . . . .	264
7.4.6	Back surface field and local ohmic contacts . . . . .	266
7.5	Summary . . . . .	268
7.6	Tasks . . . . .	273

<b>8. Solar Cells Based on III–V Semiconductors</b>	<b>275</b>
8.1 III–V Semiconductor Family . . . . .	275
8.1.1 Binary III–V semiconductors . . . . .	275
8.1.2 Ternary and quaternary III–V semiconductors . . . . .	277
8.1.3 Optical absorption of III–V semiconductors . . . . .	280
8.2 Hetero-Junctions of III–V Semiconductors . . . . .	283
8.2.1 Type I and type II semiconductor hetero-junctions . . .	283
8.2.2 Role of interface dipoles and interface states for band offsets . . . . .	285
8.2.3 Doped type I and type II semiconductor hetero-junctions . . . . .	288
8.3 Epitaxial Growth of III–V Semiconductors . . . . .	289
8.3.1 Principle of epitaxy with III–V semiconductors . . . . .	289
8.3.2 Molecular beam epitaxy of III–V semiconductors . . . . .	296
8.3.3 Metal organic vapor phase epitaxy of III–V semiconductors . . . . .	298
8.3.4 Epitaxial lift-off of III–V semiconductors . . . . .	301
8.4 Single- and Multi-Junction Solar Cells of III–V Semiconductors . . . . .	302
8.4.1 Design of the <i>pn</i> -junction of solar cells of III–V semiconductors . . . . .	302
8.4.2 Architecture and band diagram of single-junction solar cells . . . . .	303
8.4.3 Ohmic metal contacts with III–V semiconductors . . .	305
8.4.4 Tandem solar cells with III–V semiconductors . . . . .	308
8.4.5 Triple-junction concentrator solar cells . . . . .	311
8.4.6 Quadruple- and five-junction solar cells . . . . .	314
8.5 Summary . . . . .	316
8.6 Tasks . . . . .	318
<b>9. Thin-Film Solar Cells</b>	<b>321</b>
9.1 Concept of Thin-Film Photovoltaics . . . . .	322
9.1.1 About the architecture of thin-film solar cells and modules . . . . .	322

9.1.2	Sputtering and plasma-enhanced chemical vapor deposition . . . . .	325
9.2	Transparent Conducting Oxides . . . . .	328
9.2.1	Doping and electron mobility in transparent conducting oxides . . . . .	328
9.2.2	Resistance of transparent conducting oxide layers . . . . .	330
9.2.3	Optical losses in transparent conducting oxides . . . . .	332
9.3	Amorphous and Microcrystalline Silicon Solar Cells . . . . .	336
9.3.1	Disorder and mobility of charge carriers in amorphous silicon . . . . .	336
9.3.2	Optical absorption and optical band gap in amorphous silicon . . . . .	340
9.3.3	Doping of amorphous silicon . . . . .	341
9.3.4	The pin concept of amorphous silicon solar cells . . . . .	342
9.3.5	Staebler–Wronski effect in amorphous silicon solar cells . . . . .	346
9.3.6	a-Si:H/ $\mu$ c-Si:H tandem solar cells . . . . .	347
9.4	Chalcogenide Solar Cells . . . . .	348
9.4.1	The chalcogenide absorber families . . . . .	348
9.4.2	Band gaps and absorption in chalcogenides . . . . .	350
9.4.3	Technological aspects of CdTe solar cells . . . . .	352
9.4.4	Defects, phases and self-compensation . . . . .	354
9.4.5	Contacts in chalcogenide solar cells . . . . .	359
9.4.6	Treatment of Cu(In,Ga)Se <sub>2</sub> absorbers with alkali elements . . . . .	363
9.5	Hybrid Organic–Inorganic Metal Halide Perovskite Solar Cells . . . . .	365
9.5.1	The family of hybrid organic–inorganic metal halide perovskites . . . . .	365
9.5.2	Band gaps and optical absorption of hybrid organic–inorganic metal halide perovskites . . . . .	366
9.5.3	Diffusion length and type of conductivity in CH <sub>3</sub> NH <sub>3</sub> PbI <sub>3</sub> . . . . .	368
9.5.4	Preparation of hybrid organic–inorganic metal halide perovskites . . . . .	371
9.5.5	Solar cells with hybrid organic–inorganic metal halide perovskites . . . . .	374

9.6	Summary . . . . .	375
9.7	Tasks . . . . .	380
<b>10.</b>	<b>Nanocomposite Solar Cells</b>	<b>383</b>
10.1	The Concept of Nanocomposite Materials for Photovoltaics . . . . .	384
10.1.1	New quality of properties in nanocomposite materials	384
10.1.2	Photovoltaic absorbers with very short diffusion or drift lengths . . . . .	386
10.2	Quantum Dot-Based Nanocomposite Solar Cells . . . . .	388
10.2.1	Quantum confinement in semiconductor nanocrystals . . . . .	388
10.2.2	Solution-based fabrication of quantum dot absorbers . . . . .	393
10.2.3	Charge transport and separation in quantum dot solar cells . . . . .	396
10.3	Organic Solar Cells . . . . .	400
10.3.1	Organic semiconductors with conjugated $\pi$ -electron systems . . . . .	400
10.3.2	Excitons in organic semiconductors . . . . .	405
10.3.3	Donor-acceptor hetero-junction and organic nanocomposite absorber . . . . .	406
10.3.4	Charge-selective and ohmic contacts in organic solar cells . . . . .	409
10.3.5	Optimization routes of organic solar cells . . . . .	413
10.4	Dye-Sensitized Solar Cells . . . . .	415
10.4.1	Light absorption in dye molecules . . . . .	415
10.4.2	Dye sensitization of a sintered network of $\text{TiO}_2$ nanoparticles . . . . .	417
10.4.3	Local charge separation and charge transport in dye-sensitized solar cells . . . . .	419
10.4.4	Passivation and co-sensitization of dye-sensitized solar cells . . . . .	424
10.4.5	About the inherent stability of dye-sensitized solar cells . . . . .	427
10.4.6	Solar cells sensitized with methylammonium lead triiodide . . . . .	429
10.5	Light Concentration by Nanophotonic Concepts for Solar Cells . . . . .	431

10.5.1	Optical confinement for solar cells . . . . .	431
10.5.2	Enhancement of optical absorption in very thin absorbers . . . . .	433
10.5.3	Nanowire array solar cells . . . . .	435
10.6	Summary . . . . .	437
10.7	Tasks . . . . .	442
<b>Appendix. Solutions to Tasks</b>		<b>445</b>
A.1	Solutions to Chapter 1 . . . . .	445
A.2	Solutions to Chapter 2 . . . . .	450
A.3	Solutions to Chapter 3 . . . . .	453
A.4	Solutions to Chapter 4 . . . . .	455
A.5	Solutions to Chapter 5 . . . . .	461
A.6	Solutions to Chapter 6 . . . . .	465
A.7	Solutions to Chapter 7 . . . . .	470
A.8	Solutions to Chapter 8 . . . . .	473
A.9	Solutions to Chapter 9 . . . . .	478
A.10	Solutions to Chapter 10 . . . . .	484
<b>Bibliography</b>		<b>489</b>
<b>Index</b>		<b>519</b>
