<b>1 Types of lightning discharges and lightning terminology</b>	<b>1</b>
1.1 Overview	1
1.2 Downward negative lightning	2
1.3 Downward positive lightning	6
1.4 Artificially initiated lightning	7
1.5 Upward lightning	10
1.6 Luminous phenomena between cloud tops and the ionosphere	12
1.7 High-energy radiation from lightning and thunderstorms	13
1.8 The global electric circuit	15
Questions and problems	16
Further reading	16
<b>2 Incidence of lightning to areas and structures</b>	<b>17</b>
2.1 Introduction	17
2.2 Thunderstorm days	17
2.3 Thunderstorm hours	20
2.4 Ground flash density	20
2.5 Lightning incidence to various objects	23
2.6 Summary	29
Questions and problems	29
Further reading	30
<b>3 Electrical structure of thunderclouds</b>	<b>31</b>
3.1 General information about thunderstorms	31
3.2 Idealized gross charge distribution	33
3.3 Observations	39
3.4 Mechanisms of cloud electrification	44
3.5 Lower positive charge region	47
3.6 Summary	50
Questions and problems	50
Further reading	51

<b>4 Properties of the downward negative lightning discharge to ground</b>	52
4.1 General picture	52
4.2 Initial breakdown	58
4.3 Stepped leader	65
4.4 Attachment process	80
4.5 Return stroke	84
4.6 Subsequent leader	102
4.7 Continuing current	104
4.8 M-component	107
4.9 J- and K-processes	111
4.10 Summary	112
Questions and problems	113
Further reading	114
<b>5 Calculation of lightning electromagnetic fields</b>	115
5.1 General approach	115
5.2 Field equations	116
5.3 The reversal distance for electrostatic and induction electric field components of a short current element	119
5.4 Non-uniqueness of electric field components	120
5.5 Short channel segment vs. total radiating channel length	121
5.6 Channel-base current equation	123
5.7 Propagation effects	123
5.8 Summary	125
Questions and problems	125
Further reading	126
<b>6 Modeling of the lightning return stroke</b>	127
6.1 Introduction and classification of models	127
6.2 Engineering models	128
6.3 Equivalency between the lumped-source and distributed-source representations	133
6.4 Extension of models to include a tall strike object	134
6.5 Testing model validity	135
6.6 Summary	143
Questions and problems	143
Further reading	144
<b>7 Measurement of lightning electric and magnetic fields</b>	145
7.1 Wideband electric field measurements	145
7.2 Wideband magnetic field measurements	153
7.3 Characteristics of wideband electric and magnetic fields produced by lightning	157

7.4 Summary	159
Questions and problems	160
Further reading	160
<b>8 Electromagnetic methods of lightning location</b>	<b>161</b>
8.1 Introduction	161
8.2 Principles of lightning location	161
8.3 Performance characteristics	169
8.4 Examples of modern lightning locating systems	171
8.5 Summary	176
Questions and problems	177
Further reading	177
<b>9 Lightning damaging effects and protective techniques</b>	<b>178</b>
9.1 General principles	178
9.2 Lightning parameters vs. damage mechanisms	180
9.3 Electrogeometrical model (EGM)	184
9.4 Bonding vs. isolating approaches in lightning protection practice	187
9.5 Summary	191
Questions and problems	191
Further reading	192
<i>Appendices</i>	
<i>Appendix 1 How is lightning initiated in thunderclouds?</i>	193
<i>Appendix 2 Reconstruction of sources from measured electrostatic field changes</i>	197
<i>Appendix 3 Derivation of exact equations for computing lightning electric and magnetic fields</i>	200
<i>Appendix 4 Compact intracloud discharges (CIDs)</i>	209
<i>Appendix 5 Is it true that lightning never strikes the same place twice?</i>	212
<i>Appendix 6 Is it possible to use lightning as an energy source?</i>	213
<i>Appendix 7 Lightning safety</i>	215
<i>Appendix 8 Lightning makes glass</i>	218
<i>Appendix 9 Bibliography on triggered lightning experiments and natural lightning observations at Camp Blanding, Florida (1995–2014)</i>	225
<i>Glossary</i>	236
<i>References</i>	238
<i>Index</i>	253
