Preface.....	xiii
Author.....	xv

Part A Fluid Dynamics Fundamentals with Applications

1 Review of Basic Concepts	3
1.1 The Continuum Mechanics Hypothesis	3
1.2 Definitions, Fluid Properties, and Constitutive Equations	5
1.2.1 Definitions.....	5
1.2.2 Thermodynamic Properties	8
1.2.3 Constitutive Equations.....	8
1.2.4 Stress Tensors and Stress Vectors	10
1.2.5 Flux Vectors	13
1.3 Derivation and Modeling Approaches	14
1.3.1 Approaches to Problem Solving	15
1.3.2 Derivation Techniques	17
1.3.3 Basic Flow Assumptions and their Mathematical Statements	17
1.3.4 Closed versus Open Systems and Associated Flow Descriptions	18
1.3.5 Material (or Stokes) Derivative.....	20
1.4 Scale Analysis and Dimensionless Groups.....	22
1.4.1 Examples of Scaling.....	22
1.4.1.1 A Note on the Reynolds Number	23
1.4.2 Non-Dimensionalization of Equations.....	23
1.5 Homework Assignments	24
1.5.1 Physical Insight	24
1.5.2 Engineering Problems.....	26
2 Conservation Laws with Illustrative Examples	29
2.1 The Reynolds Transport Theorem.....	31
2.1.1 Extended Cases	33
2.1.2 Setting up the Reynolds Transport Theorem	34
2.2 Fluid-Mass Conservation: The Continuity Equation.....	35
2.2.1 Fluid-Mass Conservation in Integral Form.....	35
2.2.2 Continuity in Differential Form	39
2.2.2.1 Differential Mass Balance	40
2.3 Momentum Conservation Equations: Linear Momentum Transfer and Vorticity Transport	43
2.3.1 The Momentum Equation in Integral Form	43
2.3.2 Momentum Conservation in Differential Form.....	45
2.3.2.1 The Equation of Motion.....	45
2.3.2.2 Force Balance Derivation.....	47

2.3.3	Special Cases of the Equation of Motion	48
2.3.3.1	The Navier–Stokes Equation	49
2.3.3.2	Prandtl’s Boundary-Layer Equations	49
2.3.3.3	Stokes Equation	50
2.3.3.4	Euler Equation	50
2.3.3.5	Bernoulli Equation	51
2.3.4	Basic Examples of Linear Momentum Transfer	56
2.3.5	Vorticity Dynamics.....	61
2.3.5.1	Vorticity Vector and Fluid Circulation.....	61
2.3.5.2	Vorticity Transport Equation.....	62
2.3.5.3	Vortex-Line Straining.....	63
2.3.5.4	Vorticity Diffusion	64
2.3.5.5	Helicity.....	65
2.4	Scalar Transport Equations: Energy and Species-Mass Conservation	66
2.4.1	Macro-Scale Energy Balance.....	66
2.4.2	The Convection-Diffusion Equation for Heat Transfer	68
2.4.3	The Species Convection-Diffusion Equation	72
2.5	Homework Assignments	74
2.5.1	Physical Insight	74
2.5.2	Engineering Problems.....	76
3	Incompressible Viscous Fluid Flow Applications	79
3.1	Internal Laminar Flows	79
3.1.1	Steady Fully-Developed Flows.....	80
3.1.2	Near-Parallel Flows	90
3.1.3	Forced Convection Heat Transfer	92
3.1.3.1	Convection Heat Transfer Coefficient	93
3.1.3.2	The Nusselt Number.....	94
3.1.3.3	The Reynolds-Colburn Analogy.....	95
3.1.4	Transient One-Dimensional Flows.....	99
3.1.4.1	Stokes’ First Problem: Thin Shear-Layer Development.....	100
3.1.4.2	Transient Pipe Flow	102
3.2	External Laminar Flows.....	107
3.2.1	Momentum Boundary-Layer Flow.....	108
3.2.1.1	Solution Methods for Flat-Plate Boundary-Layer Flows	108
3.2.2	Thermal Boundary-Layer Flow	113
3.2.2.1	Thick Thermal Boundary Layers.....	115
3.2.2.2	Thin Thermal Boundary Layers	115
3.2.2.3	Nusselt Number Correlations	116
3.2.3	Drag and Lift Computations	119
3.2.4	Steady Planar and Round Jets.....	123
3.2.4.1	Exact Solution	128
3.3	Turbulent Flows.....	129
3.3.1	External Flows.....	132
3.3.1.1	Boundary-Layer Velocity Profiles	132
3.3.1.2	Summary of Modeling Results	136
3.3.2	Internal Flows.....	137
3.3.2.1	Turbulent Convection Heat Transfer	141

3.4	Homework Assignments	148
3.4.1	Physical Insight	149
3.4.2	Engineering Problems.....	151

Part B Modern Fluid Dynamics Topics

4	Mixture Flows	157
4.1	Porous Medium Flow	159
4.1.1	Saturated Porous Medium Flow	159
4.1.2	Modeling of Flow through Saturated Porous Media.....	162
4.2	Pseudo Two-Phase Flows.....	168
4.2.1	Quasi-Homogeneous Mixture Flows.....	168
4.2.2	Non-Newtonian Fluid Flow	175
4.2.2.1	Internal Flow of Power-Law Fluids	176
4.2.3	Internal Flow of Bingham Plastics	180
4.3	Fluid-Particle Dynamics	183
4.3.1	Micron-Particle Transport and Deposition	183
4.3.2	Nanoparticle Transport.....	189
4.4	Homework Assignments	192
4.4.1	Physical Insight	192
4.4.2	Engineering Problems.....	193
5	Basic Lubrication Systems	197
5.1	Lubrication Approximations	198
5.1.1	Slot-Flow Analysis	199
5.1.2	Squeeze-Film Lubrication.....	200
5.1.3	Planar Lubrication	203
5.2	The Reynolds Lubrication Equation.....	206
5.3	Lubricants with Nanoparticles.....	212
5.4	Homework Assignments	213
5.4.1	Physical Insight	214
5.4.2	Engineering Problems.....	214
6	Fluid Spreading, Film Drawing, and Surface Coating.....	217
6.1	Introduction	217
6.2	Fluid-Interface Mechanics	217
6.3	Drawing and Coating Processes.....	224
6.4	Spray-Coating.....	232
6.5	Homework Assignments	233
6.5.1	Physical Insight	233
6.5.2	Engineering Problems.....	234
7	Microscale Fluid Dynamics.....	237
7.1	Introduction	237
7.2	Microscale Flow Systems	239
7.3	Fluid Flow in Microconduits.....	241
7.3.1	Scale Analysis.....	241
7.3.2	Fluid Properties and Flow Conditions	246

7.3.3	Wall Slip Velocity and Temperature Jump	249
7.3.3.1	Velocity-Slip Models	250
7.3.3.2	Temperature-Jump Model.....	251
7.3.4	Electro-Osmotic Flow.....	253
7.3.4.1	Summary	261
7.4	Homework Assignments	262
7.4.1	Physical Insight	262
7.4.2	Engineering Problems.....	263
8	Fluid–Structure Interaction	267
8.1	Introduction	267
8.2	Solid Mechanics Review	268
8.2.1	Stresses in Solid Structures	268
8.2.2	Equilibrium Conditions	272
8.2.3	Stress–Strain Relationships	274
8.2.3.1	Deformation Analysis.....	274
8.2.3.2	Simplifications	277
8.2.3.3	Plane Stress Analysis	278
8.3	Slender-Body Dynamics.....	279
8.3.1	Flow-Induced Slender-Body Oscillations.....	280
8.3.2	Flow-Induced Concentrated-Mass Oscillations	282
8.4	Flow-Induced Vibration	284
8.4.1	Harmonic Response to Free Vibration.....	287
8.4.1.1	Undamped Vibration Case	287
8.4.1.2	Damped Vibration Case	288
8.4.2	Harmonic Response to Forced Vibration	293
8.5	Homework Assignments	295
9	Computational Fluid Dynamics Modeling and Simulation	297
9.1	Introduction	297
9.2	Modeling Objectives and Numerical Tools.....	299
9.2.1	Problem Recognition and Modeling Scale.....	299
9.2.2	Mathematical Modeling and Data Needs	301
9.2.3	Computational Fluid Dynamics	301
9.2.3.1	Simulation Accuracy.....	302
9.2.3.2	Equation Discretization.....	303
9.2.3.3	Boundary Conditions	304
9.2.4	Result Interpretation and Data Management Plan	304
9.2.4.1	Data Management Plan	305
9.2.5	Computational Design Aspects	306
9.2.5.1	Computer Simulations.....	306
9.2.5.2	Computer-Aided Design	306
9.3	Computer Simulation Examples	308
9.3.1	Computer Model Validations	308
9.3.2	Sample Case Studies.....	311
9.3.2.1	Steady Laminar Newtonian versus Non-Newtonian Fluid Flows in a Constricted Tube	311
9.3.2.2	Transient Laminar Flow Past a Tall Obstacle.....	319

10 Course Projects.....	331
10.1 Introduction	331
10.2 Guidelines for Project Report Writing	331
10.3 Course Project Suggestions	332
10.3.1 Tutorial Project with Analytic Solutions	334
10.3.2 Computer Simulation and Design Projects Using Open-Source Software	335
Appendix 1: Comparison of Poiseuille, Annular, and Slit Flow Phenomena	335
A1.1 Introduction	335
A1.2 Poiseuille Flow in a Pipe	336
A1.2.1 Assumptions.....	336
A1.3 Pressure-Driven Flow in a Narrow Slit	338
A1.3.1 Assumptions.....	338
A1.4 Pressure-Driven Flow in an Annulus	340
A1.4.1 Assumptions.....	340
A1.5 Friction Factor.....	342
A1.6 Conclusions and Limitations.....	344
Appendix 2: A Circular Cylinder in Laminar Cross Flow	345
A2.1 Introduction	345
A2.2 Mathematical Model.....	346
A2.2.1 System Sketch	346
A2.2.2 Assumptions and Postulates.....	347
A2.2.3 Boundary Conditions.....	347
A2.2.4 Describing Equations	347
A2.3 Case Setup: Cylinder in Cross Flow	348
A2.3.1 Mesh.....	348
A2.3.2 Mesh-Independence Test	349
A2.3.3 Boundary Conditions.....	349
A2.3.3 Control Dictionary.....	350
A2.3.4 Numerical Schemes	350
A2.3.5 Solution and Algorithm Control.....	350
A2.4 Post-Processing: Results and Discussion.....	351
A2.4.1 Comparison between $Re = 20$ and $Re = 200$	351
A2.4.2 Velocity Contours.....	351
A2.4.3 Streamlines	351
A2.4.4 Plot of Lift and Drag Coefficients	351
Appendix 3: Enhancement of microfluidic mixing through optimization of microchannel geometry and inlet flow conditions	359
A3.1 Introduction	360
A3.2 Mathematical model	361
A3.2.1 System sketch	361
A3.2.2 Assumptions.....	362
A3.2.3 Postulates	362
A3.2.4 Governing Equations	362
A3.2.4.1 Continuity Equation	363
A3.2.4.2 Momentum Equation.....	363
A3.2.4.3 Species-Mass Transfer Equation	363

A3.3 Case-Study Setup	363
A3.3.1 Mesh.....	363
A3.3.2 Material Properties	364
A3.3.3 Boundary Conditions.....	366
A3.3.4 Numerical Schemes	367
A3.3.5 Solution and Algorithm Control.....	367
A3.3.6 Quasi-Stationary State.....	368
A3.4 Results and Discussion	368
A3.4.1 Comparison between Diffusion and Dispersion	368
A3.4.2 Modification of Geometry	370
A3.4.3 Modification of Inlet Flow Conditions.....	372
A3.5 Conclusions	379
References	381
Appendix I.....	389
Appendix II	425
Index	437
