Authors	xxiii

Part I Systems Physiology, Transport Processes, Cell Physiology, and the Cardiovascular System

1. A Systems Approach to Physiology	3
1.1 Introduction	3
1.2 An Analogy.....	5
1.3 Physiological Control Systems	5
1.4 A Generic Negative Feedback Control System	8
1.5 Regulation of Body Functions.....	10
1.6 Control of Respiration	13
1.7 Positive Feedback Systems.....	17
1.7.1 How Is an Action Potential Generated?.....	18
1.7.2 Action Potential: A Positive Feedback Process	19
1.8 Introduction to the Analysis of Block Diagrams.....	23
1.8.1 Input–Output Notation.....	23
1.8.2 Overall Process Inputs	25
1.8.3 Interaction of Blocks in a Block Diagram	28
1.8.4 Constructing a Block Diagram from a Narrative Description of a Process.....	28
1.8.4.1 High Glucose Levels and Insulin Secretion	29
1.8.4.2 Low Glucose Levels and Glucagon Secretion	30
1.8.5 Metabolism of Insulin and Glucagon	31
1.8.6 Diabetes Mellitus	32
1.8.7 Creating a Block Diagram from the Narrative	33
1.8.8 Analysis of Block Diagrams	35
1.8.9 Set Points.....	35
1.8.10 Laplace Transforms	36
1.8.11 Analysis of Closed-Loop Systems in the Laplace Domain	36
1.8.12 Two Transfer Functions.....	37
Problems.....	38

2. Modeling of Physiological Processes	41
2.1 The Standard Person	41
2.1.1 An Engineering Point of View	41
2.2 Mathematical Models	42
2.2.1 Mechanical and Electrical Analog Models	43
2.2.1.1 Electrical Analogs	43
2.2.1.2 Mechanical Analogs	45
2.2.2 Conservation of Mass, Energy, and Momentum.....	53
2.2.2.1 Fluxes and Rates.....	54
2.2.2.2 Linear Rate Laws.....	55
2.3 Types of Models	59
2.3.1 Algebraic Models	59
2.3.2 Distributed Parameter Models.....	75
2.4 Validation of Models.....	77
2.4.1 Parameter Estimation.....	77
Problems.....	85
References	92
Further References on Theoretical and Experimental Work on Capillary Permeability.....	93
 3. Cell Physiology and Transport.....	 95
3.1 Introduction	95
3.2 How Do Ions and Molecules Get into and out of Cells?	96
3.2.1 Diffusion	97
3.2.2 Diffusion of Ions	98
3.2.3 Membrane Potentials.....	98
3.3 Free Energy and Chemical Potential.....	98
3.3.1 Equilibrium Potentials for Ions.....	100
3.3.2 Water Transport	101
3.3.3 Osmotic Pressure	101
3.3.4 Permeant Solutes.....	104
3.3.5 Osmolarity	105
3.3.6 Osmotic Relations in Cells.....	106
3.4 Gibbs–Donnan Equilibrium.....	108
3.4.1 Cellular Volume Regulation.....	111
3.5 Carrier-Mediated Transport.....	111
3.5.1 Characteristics of Carrier-Mediated Transport Processes.....	112
3.5.2 Classification of Carrier-Mediated Transport.....	113
3.5.3 Molecular Characteristics of Transport Carriers	114
3.5.3.1 ATPases.....	114
3.5.3.2 Organelle Sequestration of Ca.....	117
3.5.3.3 Cell Membrane	117

- 3.5.4 Ion Channels and Membrane Potential..... 118
 - 3.5.4.1 Resting Membrane Potential 118
 - 3.5.4.2 The Goldman–Hodgkin–Katz Equation..... 118
 - 3.5.5 Channels 122
 - 3.5.6 Signal Transduction..... 123
 - 3.5.7 G-Proteins 123
 - 3.5.8 G-Protein-Dependent Effectors 124
 - 3.5.9 Calcium Sparks 127
- 3.6 Action Potentials 127
 - 3.6.1 The Hodgkin–Huxley (HH) Model..... 129
 - 3.6.1.1 The HH Model Can Predict Action Potentials..... 131
 - 3.6.2 Membrane Currents 132
 - 3.6.3 Accommodation and Refractory Periods 133
- 3.7 How Do Muscles and Cells Contract?..... 133
 - 3.7.1 Overview of Muscle Contraction..... 133
 - 3.7.1.1 Anatomical Arrangements in Skeletal Muscle.....134
 - 3.7.1.2 Control and Mechanics 134
 - 3.7.1.3 Cellular Regulation of Contractile Activation 135
 - 3.7.1.4 Neural Control of Force..... 136
- 3.8 Mechanical Properties of Skeletal Muscle..... 137
 - 3.8.1 Relationship between Force Developed and Velocity of Shortening 139
- 3.9 Energetics of Skeletal Muscle Contraction 139
 - 3.9.1 Cardiac Muscle..... 141
 - 3.9.1.1 Pacemaker Activity 141
 - 3.9.1.2 Excitation–Contraction Coupling 142
 - 3.9.1.3 Mechanical Properties..... 142
 - 3.9.2 Smooth Muscle..... 142
 - 3.9.3 Mechanical and Energetic Properties of Smooth Muscle 143
- 3.10 Summary..... 144
- Problems..... 145
- References 149

4. Principles and Biomedical Applications of Hemodynamics..... 151

- 4.1 Introduction 151
- 4.2 Electrical Analogs of Steady Flow: Ohm’s Law 153
- 4.3 Newton’s Law of Viscosity..... 155
- 4.4 Laminar Flow and the Viscosity of Blood..... 157
 - 4.4.1 The Casson Model 159
 - 4.4.2 The Power-Law Fluid Model..... 160
 - 4.4.3 The Bingham Plastic Model 160

4.5	Flow in a Tube.....	161
4.5.1	The Hagan–Poiseuille Equation (Poiseuille’s Law).....	161
4.5.1.1	Visualize the Flow.....	162
4.6	General Forms of the Equations of Motion.....	168
4.6.1	The Equation of Continuity.....	169
4.6.2	The Equations of Motion.....	170
4.6.3	Constant p and Constant μ : The Navier–Stokes Equations.....	176
4.6.4	The Euler Equations: For $\mu = 0$ [or $(\nabla \cdot \tau) = 0$].....	176
4.6.4.1	A Word about Boundary Conditions.....	178
4.7	Unsteady Laminar Flow in a Tube.....	180
4.8	Pulsatile Flow in a Thin-Walled Tube.....	181
4.8.1	Calculation of Flow from Measured Pressure Gradient.....	185
4.9	Computational Fluid Dynamics.....	186
4.9.1	Wall Motion and Fluid–Structure Interactions.....	187
4.9.2	Some Recent Results.....	189
4.10	Dimensionless Forms of the Equations of Change.....	190
4.11	Turbulence.....	192
4.11.1	Commonly Occurring Heart Sounds.....	194
4.12	Chapter Overview.....	201
	Problems.....	201
	References.....	205
	Further Readings.....	205
5.	The Cardiovascular System.....	207
5.1	Introduction.....	207
5.1.1	Vessels Are Identified by Their Anatomical Structure and Size.....	209
5.2	Flow, Pressure, and Volume Relationships in the Cardiovascular System.....	212
5.2.1	Electrocardiogram.....	212
5.2.1.1	Standard Limb Leads (I, II, and III).....	215
5.2.1.2	Augmented Limb Leads (aVR, aVL, and aVF).....	216
5.2.1.3	Chest Leads (V1–V6).....	216
5.2.2	The 12-Lead ECG.....	217
5.2.3	Guides for Interpretation of ECG Strips.....	218
5.3	The Cardiac Cycle.....	218
5.4	Propagation of the Pressure Wave.....	222
5.5	Impedance and Resistance.....	223
5.5.1	Longitudinal Impedance.....	226
5.5.2	Input Impedance.....	228

5.5.3	Characteristic Impedance	229
5.5.4	Terminal Impedance	230
5.6	Elastic Modulus, Distensibility, and Compliance (Capacitance)	231
5.6.1	The Bulk Modulus and Distensibility	232
5.6.2	Distensibility and Compliance	234
5.7	Aortic and Carotid Baroreceptors, Our Defense against the Effects of Gravity	236
5.8	Atriovenous Baroreceptors: Long-Term Regulation of Mean Arterial Pressure	237
5.9	The Frank–Starling Mechanism (Heterometric Autoregulation)	239
5.10	Modeling the Ventricles: Time-Varying Elastance Left Ventricular Work Loops	240
5.10.1	Cardiac Work	242
5.11	A Compartmental Model for the Circulatory System	251
5.11.1	Coupling of the Ventricles with the Systemic Circulation	253
5.12	The Failing Heart	257
5.12.1	Systolic Dysfunction	257
5.12.1.1	The Laplace Equation for Ventricular Stress	260
5.12.2	Diastolic Dysfunction	260
5.12.3	Right Heart Failure	261
5.12.4	Compensatory Mechanisms	261
5.13	Summary	263
	Problems	263
	References	269
	Further Readings	271

Part II Signal Processing

6.	Biomedical Signals Processing	275
6.1	Introduction	275
6.2	The Time to Frequency Domain Transform	275
6.3	Introduction to Digital Signals	278
6.4	Sequences	280
6.5	Bioelectric Signals	283
6.6	Pulse Decomposition: An Important DSP Concept	285
6.7	Signal Quantization	285
6.8	Sampling Rate	287
	Problems	291
	Reference	293
	Further Readings	293

7. Fourier Series	295
7.1 Evaluation of Fourier Coefficients	298
7.2 Waveform Symmetries	300
7.3 Exponential Form of the Fourier Series	302
7.4 Fourier Transforms and Continuous Spectra	305
7.5 Some Useful Fourier Transform Pairs.....	309
7.6 Discrete Fourier Transforms, Fast Fourier Transforms	314
7.7 Frequency Resolution and Zero Padding	318
7.8 Power Spectrum	320
7.9 Coherence.....	322
7.10 Properties of the Fourier Transform.....	322
7.11 Filtering	323
7.12 Examples	325
Problems.....	329
References	330
 8. DSP System Level Concepts and Digital Filter Implementations	331
8.1 Superposition.....	331
8.2 Digital Filter and Convolution	333
8.3 Windowing	338
Problems.....	345
Reference.....	347
Further Reading	347
 9. Techniques and Examples for Physiological Signal Processing	349
9.1 AR Modeling	349
9.2 Time-Frequency Analysis	351
9.2.1 Short-Time Fourier Transform	356
9.2.2 Quadratic Distributions	356
9.2.2.1 The Wigner Distribution	356
9.2.2.2 General Class of Distributions	359
9.3 Examples of Physiological Signals Processing	360
9.3.1 Physiology of the Autonomic Nervous System and Heart Rate Variability	361
9.4 Measurement of Physiological Stress.....	367
9.5 Circadian Rhythms.....	369
9.6 EEG, Spectral Analysis, and Coherence	372
9.7 EMG, Spectral Analysis, and Mean Power Frequency	374
Problems.....	377
References	377

Part III Biomechanics

10. Biomechanics: Bone	381
10.1 Introduction	381
10.1.1 A History of Biomechanics.....	381
10.1.2 Wolff's Law	382
10.2 Mechanical Concepts.....	383
10.2.1 Structure of Materials	384
10.2.2 Tissue Health.....	384
10.2.3 Internal and External Loading	384
10.2.3.1 Musculoskeletal Motion.....	385
10.3 Material Concepts	388
10.4 Structure and Function of Musculoskeletal Tissues: Bone.....	392
10.4.1 Material Composition of Bone	397
10.4.2 Cortical Bone: Elastic Behavior	398
10.4.3 Cortical Bone	399
10.4.4 Trabecular Bone	402
10.4.5 Trabecular Bone: Viscoelastic Behavior.....	404
10.4.6 Fracture	405
10.4.6.1 Fatigue Fracture.....	408
References	410
 11. Structure and Function of Musculoskeletal Tissues, Connective Tissue, and Spine	411
11.1 Collagen.....	411
11.2 Ligaments.....	411
11.3 Tendon	413
11.4 Cartilage	415
11.5 Muscle.....	415
11.6 Muscle (Connective Tissue) Response	418
11.7 Extremities	421
11.7.1 Knee	421
11.7.1.1 Femur	422
11.7.1.2 Tibia.....	423
11.7.1.3 Patella.....	424
11.7.1.4 Anterior Cruciate Ligament.....	425
11.7.1.5 Posterior Cruciate Ligament.....	425
11.7.1.6 Overall Motion.....	425
11.7.2 Hip	426
11.7.3 Shoulder	430
11.7.3.1 Humerus.....	430
11.7.3.2 Scapula.....	430
11.7.3.3 Glenohumeral Joint.....	431

11.8	Spine.....	431
11.8.1	Spine Function.....	431
11.8.1.1	Support	431
11.8.1.2	Mobility	431
11.8.1.3	Housing/Protection	432
11.8.1.4	Control	432
11.8.2	Vertebral Column.....	432
11.8.2.1	Vertebral Body	433
11.8.2.2	Facet Joint	433
11.8.2.3	Intervertebral Discs.....	434
	Problems.....	438
	References	445

Part IV Capstone Design

12.	Biomedical Engineering and Design.....	449
12.1	Why Biomedical Engineering Is Unique	449
12.1.1	Engineering for the Practice of Medicine.....	449
12.1.2	Clinical Testing.....	450
12.1.3	The System Is Living!	452
12.2	Getting Started with Your Design Project: Design Tools and Processes	453
12.2.1	A Design Challenge.....	453
12.2.2	The Unmet Need.....	454
12.2.3	Stage Gate.....	455
12.2.4	The Design Cycle	455
12.2.4.1	Voice of Customer	455
12.2.4.2	Teamwork	456
12.3	Entrepreneurship	457
12.4	Message to Biomedical Engineering Students.....	458
	References	459
13.	A Capstone Design Curriculum for Biomedical Engineers.....	461
13.1	From Idea to Proof of Concept in 32 Weeks	461
13.1.1	Introduction.....	461
13.1.2	Capstone Resources.....	461
13.1.2.1	A Snapshot of Your Capstone Design Course ...	463
13.2	Routine Course Deliverables	465
13.2.1	Maintaining a Lab Book	465
13.2.2	Weekly Plan	467
13.2.3	Project Review Meetings	468
13.3	Design Proposal	469
13.3.1	Proof of Concept.....	470
13.3.2	Presentation Elements and Evaluation Criteria.....	471

13.3.3	Mission Statement/Statement of Purpose	472
13.3.4	Background and Precedent	473
13.3.5	Concept Description	474
13.3.6	Strategy Overview	475
13.3.6.1	Technical	476
13.3.6.2	Regulatory	476
13.3.6.3	Market	477
13.3.6.4	Legal/Reimbursement/Intellectual Property	478
13.3.7	Performance Observations	479
13.3.8	Proposal Format and Tips	481
13.4	Planning a Project Schedule	482
13.4.1	Critical Path Method	482
13.5	Project Execution Plan	485
13.5.1	Detailed Design	486
13.5.2	Specifications	486
13.5.3	Bill of Materials	487
13.5.4	Writing a Testing Protocol	488
13.6	Final Report	489
	References	489

Appendix A: Selected Reference Values	491
--	------------

Appendix B: The Continuity Equation and the Equations of Motion in Several Coordinate Systems	495
B.1 The Equation of Continuity in Several Coordinate Systems	495
B.2 The Equations of Motion	495
B.2.1 In Rectangular Coordinates (x, y, z)	495
B.2.2 In Cylindrical Coordinates (r, θ, z)	497
B.2.3 In Spherical coordinates (r, θ, ϕ)	499

Appendix C: Frequency Components of Pressure Wave	501
--	------------

Index	503
--------------------	------------
