

Contents

<i>Preface</i>	xiii
PART I	
Process understanding	1
1 Quality, processes and control	3
<i>Objectives</i>	3
1.1 <i>The basic concepts</i>	3
1.2 <i>Design, conformance and costs</i>	8
1.3 <i>Quality, processes systems, teams, tools and SPC</i>	13
1.4 <i>Some basic tools</i>	18
<i>Chapter highlights</i>	20
<i>Note</i>	21
<i>References and further reading</i>	21
<i>Discussion questions</i>	22
2 Understanding the process	24
<i>Objectives</i>	24
2.1 <i>Improving customer satisfaction through process management</i>	24
2.2 <i>Information about the process</i>	27
2.3 <i>Process mapping and flowcharting</i>	30
2.4 <i>Process analysis</i>	35
2.5 <i>Statistical process control and process understanding</i>	39
<i>Chapter highlights</i>	42
<i>Note</i>	42
<i>References and further reading</i>	42
<i>Discussion questions</i>	43

3	Process data collection and presentation	44
	<i>Objectives</i>	<i>44</i>
	<i>3.1 The systematic approach</i>	<i>44</i>
	<i>3.2 Data collection</i>	<i>46</i>
	<i>3.3 Bar charts and histograms</i>	<i>48</i>
	<i>3.4 Graphs, run charts and other pictures</i>	<i>55</i>
	<i>3.5 Conclusions</i>	<i>58</i>
	<i>Chapter highlights</i>	<i>59</i>
	<i>References and further reading</i>	<i>60</i>
	<i>Discussion questions</i>	<i>60</i>

PART II

	Process variability	63
--	----------------------------	-----------

4	Variation: understanding and decision making	65
----------	---	-----------

	<i>Objectives</i>	<i>65</i>
	<i>4.1 How some managers look at data</i>	<i>65</i>
	<i>4.2 Interpretation of data</i>	<i>67</i>
	<i>4.3 Causes of variation</i>	<i>70</i>
	<i>4.4 Accuracy and precision</i>	<i>74</i>
	<i>4.5 Variation and management</i>	<i>78</i>
	<i>Chapter highlights</i>	<i>82</i>
	<i>References and further reading</i>	<i>83</i>
	<i>Discussion questions</i>	<i>83</i>

5	Variables and process variation	84
----------	--	-----------

	<i>Objectives</i>	<i>84</i>
	<i>5.1 Measures of accuracy or centring</i>	<i>84</i>
	<i>5.2 Measures of precision or spread</i>	<i>87</i>
	<i>5.3 The normal distribution</i>	<i>89</i>
	<i>5.4 Sampling and averages</i>	<i>90</i>
	<i>Chapter highlights</i>	<i>96</i>
	<i>References and further reading</i>	<i>97</i>
	<i>Discussion questions</i>	<i>97</i>
	<i>Worked examples using the normal distribution</i>	<i>99</i>

PART III

	Process control	103
--	------------------------	------------

6	Process control using variables	105
----------	--	------------

	<i>Objectives</i>	<i>105</i>
	<i>6.1 Means, ranges and charts</i>	<i>105</i>

6.2	<i>Are we in control?</i>	117
6.3	<i>Do we continue to be in control?</i>	119
6.4	<i>Choice of sample size and frequency, and control limits</i>	122
6.5	<i>Short-, medium- and long-term variation: a change in the standard practice</i>	125
6.6	<i>Summary of SPC for variables using \bar{X} and R charts</i>	129
	<i>Chapter highlights</i>	130
	<i>References and further reading</i>	131
	<i>Discussion questions</i>	132
	<i>Worked examples</i>	138
7	Other types of control charts for variables	149
	<i>Objectives</i>	149
7.1	<i>Life beyond the mean and range chart</i>	149
7.2	<i>Charts for individuals or run charts</i>	151
7.3	<i>Median, mid-range and multi-vari charts</i>	156
7.4	<i>Moving mean, moving range and exponentially weighted moving average (EWMA) charts</i>	161
7.5	<i>Control charts for standard deviation (σ)</i>	171
7.6	<i>Techniques for short run SPC</i>	176
7.7	<i>Summarizing control charts for variables</i>	178
	<i>Chapter highlights</i>	178
	<i>Note</i>	179
	<i>References and further reading</i>	179
	<i>Discussion questions</i>	180
	<i>Worked example</i>	186
8	Process control by attributes	188
	<i>Objectives</i>	188
8.1	<i>Underlying concepts</i>	188
8.2	<i>np-charts for number of defectives or non-conforming units</i>	190
8.3	<i>p-charts for proportion defective or non-conforming units</i>	199
8.4	<i>c-charts for number of defects/non-conformities</i>	202
8.5	<i>u-charts for number of defects/non- conformities per unit</i>	206
8.6	<i>Attribute data in non-manufacturing</i>	207
	<i>Chapter highlights</i>	211
	<i>References and further reading</i>	211
	<i>Discussion questions</i>	212
	<i>Worked examples</i>	214

9 Cumulative sum (cusum) charts	218
<i>Objectives</i>	218
9.1 <i>Introduction to cusum charts</i>	218
9.2 <i>Interpretation of simple cusum charts</i>	221
9.3 <i>Product screening and pre-selection</i>	227
9.4 <i>Cusum decision procedures</i>	229
<i>Chapter highlights</i>	233
<i>References and further reading</i>	234
<i>Discussion questions</i>	234
<i>Worked examples</i>	238

PART IV

Process capability	245
---------------------------	------------

10 Process capability for variables and its measurement	247
--	------------

<i>Objectives</i>	247
10.1 <i>Will it meet the requirements?</i>	247
10.2 <i>Process capability indices</i>	248
10.3 <i>Interpreting capability indices</i>	254
10.4 <i>The use of control chart and process capability data</i>	255
10.5 <i>A service industry example: process capability analysis in a bank</i>	258
<i>Chapter highlights</i>	259
<i>References and further reading</i>	260
<i>Discussion questions</i>	261
<i>Worked examples</i>	261

PART V

Process improvement	263
----------------------------	------------

11 Process problem solving and improvement	265
---	------------

<i>Objectives</i>	265
11.1 <i>Introduction</i>	265
11.2 <i>Pareto analysis</i>	268
11.3 <i>Cause and effect analysis</i>	277
11.4 <i>Scatter diagrams</i>	282
11.5 <i>Stratification</i>	286
11.6 <i>Summarizing problem solving and improvement</i>	288
<i>Chapter highlights</i>	288

References and further reading 289
Discussion questions 290
Worked examples 293

- 12 Managing out-of-control processes** 301
- Objectives* 301
- 12.1 *Introduction* 301
- 12.2 *Process improvement strategy* 302
- 12.3 *Use of control charts for trouble-shooting* 304
- 12.4 *Assignable or special causes of variation* 314
- Chapter highlights* 318
- References and further reading* 319
- Discussion questions* 319
- 13 Designing the statistical process control system** 320
- Objectives* 320
- 13.1 *SPC and the quality management system* 320
- 13.2 *Teamwork and process control/improvement* 323
- 13.3 *Improvements in the process* 326
- 13.4 *Taguchi methods* 333
- 13.5 *Summarizing improvement* 338
- Chapter highlights* 339
- References and further reading* 340
- Discussion questions* 340
- 14 Six-sigma process quality** 341
- Objectives* 341
- 14.1 *Introduction* 341
- 14.2 *The six-sigma improvement model* 344
- 14.3 *Six-sigma and the role of Design of Experiments* 347
- 14.4 *Building a six-sigma organization and culture* 349
- 14.5 *Ensuring the financial success of six-sigma projects* 351
- 14.6 *Concluding observations and links with Excellence* 358
- Chapter highlights* 359
- References and further reading* 361
- Discussion questions* 361
- 15 The implementation of statistical process control** 363
- Objectives* 363
- 15.1 *Introduction* 363

xii *Contents*

15.2 *Successful users of SPC and the benefits derived* 364
15.3 *The implementation of SPC* 365
15.4 *Proposed methodology for implementation* 371
Acknowledgements 375
Chapter highlights 376
References and further reading 376

Appendices	377
A The normal distribution and non-normality	379
B Constants used in the design of control charts for mean	388
C Constants used in the design of control charts for range	389
D Constants used in the design of control charts for median and range	390
E Constants used in the design of control charts for standard deviation	391
F Cumulative Poisson probability curves	392
G Confidence limits and tests of significance	393
H OC curves and ARL curves for \bar{X} and R charts	402
I Autocorrelation	408
J Approximations to assist in process control of attributes	410
K Glossary of terms and symbols	415
<i>Index</i>	421
