THE MANAGEMENT INFORMATION
& STATISTICAL TOOLS YOU NEED
TO IMPLEMENT SIX SIGMA

THE SIX SIGMA HANDBOOK

A COMPLETE GUIDE FOR
GREENBELTS, BLACKBELTS, &
MANAGERS AT ALL LEVELS

THOMAS PYZDEK

Contents

Preface	<i>xi</i>
Introduction	<i>xiii</i>
Chapter 1 Six Sigma leadership	1
Leadership case studies	1
Six Sigma at Motorola, Inc.	1
Six Sigma at General Electric	3
Creativity and Six Sigma	6
Learning models	8
Six Sigma's technical component	21
Qualifications	23
Information systems requirements	24
Integrating Six Sigma with other information systems technologies	24
OLAP, data mining, and Six Sigma	30
Six Sigma readiness evaluation	31
Assessing organizational culture on quality	31
Surveys and focus groups	32
Change agents and their effects on organizations	49
Managing change	49
Roles	51
The job of change agent	52

Six Sigma teams	59
Process improvement teams	60
Work groups	61
Other self-managed teams	62
Facilitation techniques	64
Member roles and responsibilities	74
Performance evaluation	77
Team recognition and reward	79
Chapter 2 Six Sigma training and education	83
Importance of top-down support and strategic planning for quality training	86
Training subgroups and topics	87
Management training—general quality principles	87
Employee training—implementation of quality plans	93
Facilitator training	95
Training needs analysis	97
Post-training evaluation and reinforcement	99
Tools	104
Lectures, workbooks, case studies, on-the-job-training	105
Use of technology in training	128
Chapter 3 Principles of Six Sigma	133
Elements of customer-driven organizations	133
Becoming a customer-and market-driven enterprise	135
Elements of the transformed organization	137
Six Sigma versus Three Sigma	140
Kano model of customer expectations	143
Customer expectations, priorities, needs, and “voice”	143
Garden variety Six Sigma only addresses half of the Kano customer satisfaction model	144
QFD to relate customer requirements to internal specifications	145
Data collection and review of customer expectations, needs, requirements, and specifications	150

Chapter 4 Six Sigma organizational performance goals and metrics	151
Attributes of good metrics	151
Financial analysis	155
Time value of money	155
Cost of quality	163
Calculating the value of retention of customers	180
Chapter 5 Managing Six Sigma projects	185
Planning	188
Integrated quality initiatives	189
Short- and long-term quality plans and objectives	191
Feedback loops	193
Performance measures	195
Relevant stakeholders	215
Benchmarking	216
Budgeting	223
Benefit-cost analysis	226
Project management implementation	230
Management support and organizational roadblocks	230
Short-term (tactical) plans	236
Cross-functional collaboration	237
Continuous review and enhancement of quality process	239
Documentation and procedures	240
Chapter 6 Principles of measurements and data	243
Measurement	243
Scales of measurement	243
Reliability and validity of data	246
Repeatability and reproducibility studies	252
Chapter 7 Basic Six Sigma methods	269
Problem solving tools	269
Process mapping	269
Flow charts	272
Check sheets	274

Pareto analysis	277
Cause and effect diagrams	280
Scatter plots	284
7M tools	290
Affinity diagrams	290
Tree diagrams	293
Process decision program charts	294
Matrix diagrams	295
Interrelationship diagrams	296
Prioritization matrices	297
Activity network diagram	300
Other continuous improvement tools	301
Knowledge discovery tools	304
Run charts	305
Descriptive statistics	312
Histograms	316
Exploratory data analysis	323
Chapter 8 Intermediate Six Sigma methods	331
Enumerative versus analytic statistical methods	331
Enumerative statistical methods	335
Basic probability concepts	337
Theoretical expected value	342
Assumptions and robustness of tests	346
Distributions	347
Statistical inference	369
Tolerance and confidence levels, significance level	372
Hypothesis testing/Type I and Type II errors	373
Analytic statistical methods	377
Basic control charts	377
Pre-Control	434
EWMA charts	438
Process capability analysis	452
Process control for short and small runs	464

Chapter 9	Advanced Six Sigma methods	499
DOE		499
Terminology		500
Power and sample size		502
Design characteristics		503
Types of design		504
Examples of applying common DOE methods using software		511
Two way ANOVA with no replicates		511
Two way ANOVA with replicates		513
Empirical model building and sequential learning		520
Phase 0: Getting your bearings		522
Phase I: The screening experiment		523
Phase II: Steepest ascent (descent)		529
Phase III: The factorial experiment		532
Phase IV: The composite design		535
Phase V: Robust product and process design		540
Data mining, artificial neural networks, and virtual process mapping		546
Regression and correlation analysis		552
Linear models		552
Least-squares fit		560
Correlation analysis		656
Chi-square contingency tables		568
Reliability analysis		569
Basic reliability terms and principles		569
Assessing design reliability		576
Monte Carlo simulation		577
Risk assessment tools		595
Safety analysis		600
Process simulation		603
Simulation tools		604
Model development		607
Management constraints		610

Backlog	611
The simulation	612
Statistical tolerancing	620
Appendix	
Table 1—Glossary of basic statistical terms	627
Table 2—Area under the standard normal curve	635
Table 3—Critical values of the t -distribution	638
Table 4—Chi-square distribution	640
Table 5— F distribution ($\alpha=1\%$)	643
Table 6— F distribution ($\alpha=5\%$)	645
Table 7—Poisson probability sums	647
Table 8—Tolerance interval factors	651
Table 9—Durbin-Watson test bounds	655
Table 10— y factors for computing AOQL	659
Table 11—Control chart constants	660
Table 12—Control chart equations	662
Table 13—Table of d_2^* values	664
Table 14—Power functions for ANOVA	666
Table 15—Factors for short run control charts for individuals, X-bar and R charts	675
Table 16—Significant number of consecutive highest or lowest values from one stream of a multiple-stream process	677
Table 17—Sample customer survey	678
Table 18—Process σ levels and equivalent PPM quality levels	682
References	683
Index	695
