

Hydraulics of Pipeline Systems

Bruce E. Larock
Roland W. Jeppson
Gary Z. Watters

TABLE OF CONTENTS

1. Introduction.....	1
2. Review of Fundamentals.....	7
2.1 The fundamental principles.....	7
2.1.1. The basic equations.....	7
2.1.2. Energy and Hydraulic Grade Lines.....	8
2.2 Head loss formulas.....	9
2.2.1. Pipe friction.....	9
2.2.2. Darcy-Weisbach equation.....	10
2.2.3. Empirical equations.....	12
2.2.4. Exponential formula.....	14
2.2.5. Local and minor losses.....	16
2.3 Pump theory and characteristics.....	18
2.4 Steady flow analyses.....	20
2.4.1. Series pipe flow.....	20
2.4.2. Series pipe flow with pump(s).....	22
2.4.3. Parallel pipe flow, equivalent pipes.....	25
2.4.4. Three reservoir problem.....	26
2.5 Problems.....	28
3. Manifold Flow.....	33
3.1 Introduction.....	33
3.2 Analysis of manifold flow.....	33
3.2.1. No friction.....	33
3.2.2. Barrel friction only.....	34
3.2.3. Barrel friction with junction losses.....	35
3.3 A hydraulic design procedure.....	45
3.4 Problems.....	50
4. Pipe Network Analysis.....	53
4.1 Introduction.....	53
4.1.1. Defining an appropriate pipe system.....	54
4.1.2. Basic relations between network elements.....	55
4.2 Equation systems for steady flow in networks.....	56
4.2.1. System of Q -equations.....	57
4.2.2. System of H -equations.....	60
4.2.3. System of ΔQ -equations.....	62
4.3 Pressure reduction and back pressure valves.....	65
4.3.1. Q -equations for networks with PRV's/BPV's.....	66
4.3.2. H -equations for networks with PRV's/BPV's.....	72
4.3.3. ΔQ -equations for networks with PRV's/BPV's.....	74
4.4 Solving the network equations.....	78
4.4.1. Newton method for large systems of equations.....	78
4.4.2. Solving the three equation systems via Newton.....	94

4.4.3. Computer solutions to networks.....	98
4.4.4. Including pressure reducing valves.....	103
4.4.5. Systematic solution of the Q -equations.....	107
4.4.6. Systematic solution of the H -equations.....	113
4.4.7. Systematic solution of the ΔQ -equations.....	117
4.5 Concluding remarks.....	124
4.6 Problems.....	126
5. Design of Pipe Networks.....	141
5.1 Introduction.....	141
5.1.1. Solving for pipe diameters.....	141
5.1.2. Solution based on the Darcy-Weisbach equation.....	141
5.1.3. Solution based on the Hazen-Williams equation.....	145
5.1.4. Branched pipe networks.....	145
5.2 Large branched systems of pipes.....	150
5.2.1. Network layout.....	151
5.2.2. Coefficient matrix.....	154
5.2.3. Standard Linear Algebra.....	155
5.3 Looped network design criteria.....	158
5.4 Designing special components.....	175
5.5 Developing a solution for any variables.....	183
5.5.1. Logic and use of NETWEQSI.....	183
5.5.2. Data to describe the pipe system.....	185
5.5.3. Combinations that can not be unknowns.....	187
5.6 Higher order representations of pump curves.....	196
5.6.1. Within range polynomial interpolation.....	196
5.6.2. Spline function interpolation.....	198
5.7 Sensitivity analysis.....	203
5.8 Problems.....	216
6. Extended Time Simulations and Economical Design.....	227
6.1 Introduction.....	227
6.2 Extended time simulations.....	228
6.3 Elements of engineering economics.....	238
6.3.1. Economics applied to water systems.....	241
6.3.2. Least cost.....	242
6.4 Economic network design.....	247
6.4.1. One principal supply source.....	247
6.4.2. Design guidelines for complex networks.....	268
6.5 Problems.....	271
7. Introduction to Transient Flow.....	277
7.1 Causes of transients.....	277
7.2 Quasi-steady flow.....	277
7.3 True transients.....	284
7.3.1. The Euler equation.....	284
7.3.2. Rigid-column flow in constant-diameter pipes.....	285
7.3.3. Water hammer.....	295
7.4 Problems.....	300
8. Elastic Theory of Hydraulic Transients (Water Hammer).....	305
8.1 The equation for pressure head change ΔH	305
8.2 Wave speed for thin-walled pipes.....	307
8.2.1. Net mass inflow.....	307

8.2.2.	Change in liquid volume due to compressibility.....	308
8.2.3.	Change in pipe volume due to elasticity.....	308
8.3	Wave speeds in other types of conduits.....	315
8.3.1.	Thick-walled pipes.....	315
8.3.2.	Circular tunnels.....	316
8.3.3.	Reinforced concrete pipe.....	316
8.4	Effect of air entrainment on wave speed.....	318
8.5	Differential equations of unsteady flow.....	319
8.5.1.	Conservation of mass.....	320
8.5.2.	Interpretation of the differential equations.....	322
8.6	Problems.....	324
9.	Solution by the Method of Characteristics.....	329
9.1	Method of characteristics, approximate governing equations.....	329
9.1.1.	Development of the characteristic equations.....	329
9.1.2.	The finite difference representation.....	332
9.1.3.	Setting up the numerical procedure.....	334
9.1.4.	Computerizing the numerical procedure.....	336
9.1.5.	Elementary computer programs.....	338
9.2	Complete method of characteristics.....	347
9.2.1.	The complete equations.....	347
9.2.2.	The numerical solution.....	349
9.2.3.	The Δs - Δt grid.....	351
9.3	Some parameter effects on solution results.....	352
9.3.1.	The effect of friction.....	352
9.3.2.	The effect of the size of N	354
9.3.3.	The effect of pipe slope.....	354
9.3.4.	Numerical instability and accuracy.....	354
9.4	Problems.....	356
10.	Pipe System Transients.....	365
10.1	Series pipes.....	365
10.1.1.	Internal boundary conditions.....	365
10.1.2.	Selection of Δt	366
10.1.3.	The computer program.....	369
10.2	Branching pipes.....	372
10.2.1.	Three-pipe junctions.....	372
10.2.2.	Four-pipe junctions.....	375
10.3	Interior major losses.....	376
10.4	Real valves.....	378
10.4.1.	Valve in the interior of a pipeline.....	378
10.4.2.	Valve at downstream end of pipe at reservoir.....	379
10.4.3.	Expressing K_L as a function of time.....	380
10.4.4.	Linear interpolation.....	382
10.4.5.	Parabolic interpolation.....	383
10.4.6.	Transient valve closure effects on pressures.....	385
10.5	Pressure-reducing valves.....	386
10.5.1.	Quick-response pressure reducing valves.....	386
10.5.2.	Slower acting pressure-reducing or pressure-sustaining valves.....	388
10.6	Wave transmission and reflection at pipe junctions.....	388
10.6.1.	Series pipe junctions.....	388
10.6.2.	Tee junctions.....	389

10.6.3. Dead-end pipes.....	390
10.7 Column separation and released air.....	391
10.7.1. Column separation and released air.....	391
10.7.2. Analysis with column separation and released air.....	392
10.8 Problems.....	395
11. Pumps in Pipe Systems.....	399
11.1 Pump power failure rundown.....	399
11.1.1. Setting up the equations for booster pumps.....	401
11.1.2. Finding the change in speed.....	403
11.1.3. Solving the equations.....	404
11.1.4. Setting up the equations for source pumps.....	406
11.2 Pump startup.....	408
11.3 Problems.....	412
12. Network Transients.....	417
12.1 Introduction.....	417
12.2 Rigid-column unsteady flow in networks.....	417
12.2.1. The governing equations.....	417
12.2.2. Three-pipe problem.....	418
12.3 A general method for rigid-column unsteady flow in pipe networks..	422
12.3.1. The method.....	422
12.3.2. An example.....	423
12.4 Several pumps supplying a pipe line.....	427
12.5 Air chambers, surge tanks and standpipes.....	429
12.6 A fully transient network analysis.....	435
12.6.1. The initial steady state solution.....	435
12.6.2. TRANSNET.....	437
12.7 Problems.....	451
13. Transient Control Devices and Procedures.....	463
13.1 Transient problems in pipe systems.....	463
13.1.1. Valve movement.....	463
13.1.2. Check valves.....	464
13.1.3. Air in lines.....	464
13.1.4. Pump startup.....	465
13.1.5. Pump power failure.....	465
13.2 Transient control.....	466
13.2.1. Controlled valve movement.....	466
13.2.2. Check valves.....	467
13.2.3. Surge relief valves.....	467
13.2.4. Air venting procedures.....	469
13.2.5. Surge tanks.....	469
13.2.6. Air chambers.....	473
13.2.7. Other techniques for surge control.....	484
13.3 Problems.....	486
14. References.....	489
Appendices.....	493
A. Numerical Methods.....	493
A.1 Introduction.....	493
A.2 Linear algebra.....	493

A.2.1.	Gaussian elimination.....	493
A.2.2.	Use of the linear algebra solver SOLVEQ.....	494
A.3	Numerical integration.....	496
A.3.1.	Trapezoidal rule.....	496
A.3.2.	Simpson's rule.....	498
A.4	Solutions to ordinary differential equations.....	501
A.4.1.	Introduction.....	501
A.4.2.	Runge-Kutta method.....	501
A.4.3.	Use of the ODE solver ODESDOL.....	507
B.	Pump characteristic curves.....	513
C.	Valve loss coefficients.....	521
C.1	Globe and angle valves.....	521
C.2	Butterfly valves.....	523
C.3	Ball valves.....	523
D.	Answers to selected problems.....	525
Index	533
