

# MODERN ELECTROCHEMISTRY 2B

ELECTROCHEMISTRY 2B

ELECTROCHEMISTRY 2B

Electrodics in Chemistry,  
Engineering, Biology, and Environmental Science

SECOND EDITION

JOHN O'M. BOCKRIS AND AMULYA K. N. REDDY

# CONTENTS

## CHAPTER 10

### PHOTOELECTROCHEMISTRY

10.1	Introduction . . . . .	1539
10.2	More on Band Bending at the Semiconductor/Solution Interface . . . . .	1540
10.2.1.	Introduction . . . . .	1540
10.2.2.	Why the Potential Difference in a Semiconductor with No Surface States Is Largely Inside the Solid Phase . . . . .	1541
10.2.3.	Bending the Bands . . . . .	1542
10.3	Photoexcitation of Electrons by Absorption of Light . . . . .	1544
10.3.1.	<i>p</i> -Type Photocathodes . . . . .	1544
10.3.2.	The <i>n</i> -Type Photoanode . . . . .	1546
10.3.3.	The Rate-Determining Step in Photoelectrochemical Reactions . . . . .	1547
10.3.4.	The "Schottky Barrier" . . . . .	1549
10.3.5.	A Theory of the Photocurrent for Semiconductors of Low Surface State Concentration Near the Limiting Current . . . . .	1549
10.4.	What Has Been Learned about Photoelectrochemistry So Far? . . . . .	1551
10.5.	Surface Effects in Photoelectrochemistry . . . . .	1556
10.5.1.	Introduction . . . . .	1556
10.5.2.	Surface States . . . . .	1559
	10.5.2.1. Introduction . . . . .	1559
10.5.3.	Determination of Surface States . . . . .	1560
10.5.4.	What Causes a Surface State? . . . . .	1562
10.5.5.	The Effect of Surface States on the Distribution of Potential in the Semiconductor Interface . . . . .	1564

10.5.6.	Kinetic Photoelectrochemical Processes at High Surface State Semiconductors . . . . .	1567
10.5.7.	Looking Back and Looking Forward at Photoelectrochemistry . . . . .	1570
10.6.	Photoelectrocatalysis . . . . .	1571
10.7.	The Photoelectrochemical Splitting of Water . . . . .	1574
10.7.1.	The Need for Photoelectrocatalysis . . . . .	1574
10.7.2.	Could Cheap $\text{TiO}_2$ Be Used in the Economic Photoelectrolysis of Water? . . . . .	1576
10.8.	The Photoelectrochemical Reduction of $\text{CO}_2$ . . . . .	1579
10.8.1.	Photoelectrochemical Waste Removal . . . . .	1580
10.9.	Retrospect and Prospect for Photoelectrochemistry, Particularly in Respect to the Splitting of Water . . . . .	1581
	Further Reading . . . . .	1582
	Appendix 1. A Brief Note on Electroluminescence and Electoreflectance . . . . .	1585
	Appendix 2. Electrochemical Preparation of Semiconductor Electrodes . . . . .	1585
	Appendix 3. High-Resolution Techniques in the Study of Semiconductor Surfaces . . . . .	1586

## CHAPTER 11

### SELECTED ASPECTS OF ORGANO-ELECTROCHEMISTRY

11.1.	Introduction . . . . .	1599
11.1.1.	The Modernization of an Ancient Subject . . . . .	1599
11.1.2.	The Plus and Minus of Using an Electrochemical Route for Synthesis . . . . .	1600
11.2.	Determining the Mechanisms of Organoelectrochemical Reactions . . . . .	1602
11.2.1.	Introduction . . . . .	1602
11.2.2.	Anodic Oxidation of $\beta$ -Cyanoethyl Ethers . . . . .	1603
11.2.3.	The Manufacture of Nylon . . . . .	1605
11.3.	Chiral Electrodes . . . . .	1608
11.3.1.	Optical Activity at Electrodes . . . . .	1608
11.4.	Electro-Organic Syntheses . . . . .	1610
11.4.1.	Cell Design . . . . .	1610
11.4.2.	New Electrode Materials . . . . .	1611
11.4.3.	A Moving Frontier . . . . .	1612
11.5.	Electronically Conducting Organic Polymers . . . . .	1612
11.5.1.	Introduction . . . . .	1612

11.5.2.	Ionically Doped Organic Polymers as Semiconductors . . . . .	1614
11.5.3.	General Properties of Electronically Conducting Organic Polymers . . . . .	1614
11.5.3.1.	Status of Polypyrrole . . . . .	1614
11.5.3.2.	Use of Polypyrrole in Electrocatalysis . . . . .	1615
11.5.3.3.	The Oxidation and Polymerization of the Monomer . . . . .	1616
11.5.4.	The Structure of the Polypyrrole/Solution Interface . . . . .	1616
11.5.4.1.	Relevant Facts . . . . .	1616
11.5.3.2.	Structure . . . . .	1618
11.5.3.3.	Practical Electrochemical Uses of Electronically Conducting Polymers (see also Section 4.9.2) . . . . .	1619
11.5.3.4.	Electronically Conducting Organic Compounds: Problems and the Future . . . . .	1623
11.6.	Designer Electrodes . . . . .	1626
11.6.1.	Introduction . . . . .	1626
11.6.2.	Formation of Monolayers of Organic Molecules on Electrodes . . . . .	1628
11.6.3.	Apparent Catalysis by Redox Couples Introduced into Polymers Attached to Electrodes . . . . .	1629
11.6.4.	Conclusion . . . . .	1631
	Further Reading . . . . .	1631

## CHAPTER 12

### ELECTROCHEMISTRY IN MATERIALS SCIENCE

12.1.	Charge Transfer, Surface, and Civilization . . . . .	1637
12.1.1.	Introduction . . . . .	1637
12.1.2.	A Corroding Metal Is Analogous to a Short-Circuited Energy-Producing Cell . . . . .	1638
12.1.3.	Mechanism of the Corrosion of Ultrapure Metals . . . . .	1642
12.1.4.	What Is the Cathodic Reaction in Corrosion? . . . . .	1645
12.1.5.	Thermodynamics and the Stability of Metals . . . . .	1646
12.1.6.	Potential–pH (or Pourbaix) Diagrams: Uses and Abuses . . . . .	1649
12.1.7.	The Corrosion Current and the Corrosion Potential . . . . .	1652
12.1.8.	The Basic Electrodeics of Corrosion in the Absence of Oxide Films . . . . .	1655
12.1.9.	An Understanding of Corrosion in Terms of Evans Diagrams . . . . .	1659
12.1.10.	How Corrosion Rates Are Measured . . . . .	1661
	12.1.10.1. Method 1: The Weight-Loss Method . . . . .	1661
	12.1.10.2. Method 2: Electrochemical Approach . . . . .	1662
12.1.11.	Impedance Bridge Version of the Stern–Geary Approach . . . . .	1666
12.1.12.	Other Methods . . . . .	1666
12.1.13.	The Mechanisms of the Corrosion Reactions Involving the Dissolution of Iron . . . . .	1666
12.1.14.	Something about the Mechanism of the Anodic Dissolution of Iron . . . . .	1667

12.1.15.	The Mechanism of Hydrogen Evolution (HER) on Iron (A Cathodic Partner Reaction in Corrosion of a Metal in Acid Solution) . . . . .	1670
12.1.16.	The Mechanism of Oxygen Reduction on Iron . . . . .	1672
12.1.17.	Where We Are Now: Looking Back at the Beginning . . . . .	1673
12.1.18.	Some Common Examples of Corrosion . . . . .	1674
	Further Reading . . . . .	1679
12.2.	Inhibiting Corrosion . . . . .	1681
12.2.1.	Introduction . . . . .	1681
12.2.2.	Cathodic and Anodic Protection . . . . .	1681
	12.2.2.1. Corrosion Inhibition by the Addition of Substances to the Electrolytic Environment of a Corroding Metal . . . . .	1682
	12.2.2.2. Corrosion Prevention by Charging the Corroding Metal with Electrons from an External Source. . . . .	1684
12.2.3.	Anodic Protection . . . . .	1688
12.2.4.	Organic Inhibition: the Fuller Story . . . . .	1689
12.2.5.	Relations between the Structure of the Organic Molecule and Its Ability to Inhibit Corrosion . . . . .	1693
12.2.6.	Toward a Designer Inhibitor . . . . .	1695
12.2.7.	Polymer Films as an Aspect of Corrosion Inhibition . . . . .	1699
12.2.8.	Nature of the Metal Surface in Corrosion Inhibition . . . . .	1700
12.2.9.	Green Inhibitors . . . . .	1703
12.2.10.	Looking Back on Some Methods by Which We Are Able to Inhibit Corrosion . . . . .	1705
	Further Reading . . . . .	1708
12.3.	The Protection of Aluminum by Transition Metal Additions . . . . .	1709
12.3.1.	Introduction . . . . .	1709
12.3.2.	Some Facts Relevant to the Transition Metal Effect on Inhibiting Al Corrosion . . . . .	1710
12.3.3.	The Model by Which Tiny Concentrations of Transition Metal Ions Retard Corrosion of Al . . . . .	1715
12.4.	Passivation . . . . .	1719
12.4.1.	Introduction . . . . .	1719
12.4.2.	Some Definitions . . . . .	1721
12.4.3.	The Nature of the Passive Layer . . . . .	1721
12.4.4.	Structure of the Passive Film . . . . .	1726
12.4.5.	Depassivation . . . . .	1726
12.4.6.	Effects of Marine Organisms on Passive Layers . . . . .	1727
12.5.	Localized Corrosion . . . . .	1728
12.5.1.	Introduction . . . . .	1728
12.5.2.	The Initiation Mechanisms . . . . .	1729
	12.5.2.1. Forming a Pit or Crevice . . . . .	1729
	12.5.2.2. A Clamp on a Plain Piece of Metal . . . . .	1729
	12.5.2.3. Pits in Stainless Steel . . . . .	1730

12.5.3.	Events in Pits . . . . .	1731
12.5.4.	Modeling . . . . .	1731
	Further Reading . . . . .	1733
12.6.	<b>Electrochemical Aspects of the Effect of Hydrogen on Metal . . . . .</b>	1734
12.6.1.	Hydrogen Diffusion into a Metal . . . . .	1734
12.6.2.	The Preferential Diffusion of Absorbed Hydrogen to Regions of Stress in a Metal . . . . .	1736
12.6.3.	Hydrogen Can Crack Open a Metal Surface . . . . .	1739
12.6.4.	Surface Instability and the Internal Decay of Metals: Stress-Corrosion Cracking . . . . .	1742
12.6.5.	Practical Consequences of Stress-Corrosion Cracking . . . . .	1747
12.6.6.	Surface Instability and Internal Decay of Metals: Hydrogen Embrittlement . . . . .	1747
12.7.	<b>What is the Direct Experimental Evidence for Very High Pressures in Voids in Metals? . . . . .</b>	1754
12.7.1.	Introduction . . . . .	1754
12.7.2.	A Partial Experimental Verification of High Pressures in Metal Voids . . . . .	1755
12.7.3.	Indirect Measurement of High Pressures in Voids . . . . .	1757
12.7.4.	Damage Caused Internally in Metals by the Presence of H (and H <sub>2</sub> ) at Varying Overpotentials . . . . .	1759
	Further Reading . . . . .	1761
12.8.	Fatigue . . . . .	1762
12.9.	<b>The Preferential Flotation of Minerals: An Application of the Mixed Potential Concept . . . . .</b>	1763
12.9.1.	Description . . . . .	1763
12.10.	<b>At the Cutting Edge of Corrosion Research: The Use of STM and ATM . . . . .</b>	1766
12.10.1.	Application . . . . .	1766
12.11.	<b>A Laser-Based Technique for the Quantitative Measurement of H in Local Areas . . . . .</b>	1769
12.11.1.	Description . . . . .	1769
12.12.	<b>Other Methods of Examining Local Corrosion . . . . .</b>	1771
12.12.1.	Description . . . . .	1771
	Further Reading . . . . .	1772
12.13.	<b>A Bird's Eye View of Corrosion . . . . .</b>	1772
12.13.1.	Description . . . . .	1772
	Further Reading . . . . .	1775

## CHAPTER 13

### CONVERSION AND STORAGE OF ELECTROCHEMICAL ENERGY

13.1.	Introduction . . . . .	1789
13.2.	A Brief History of Fuel Cells . . . . .	1790
13.3.	Efficiency . . . . .	1794
13.3.1.	Maximum Intrinsic Efficiency in Electrochemical Conversion of the Energy of a Chemical Reaction to Electric Energy . . . . .	1794
13.3.2.	Actual Efficiency of an Electrochemical Energy Converter . . . . .	1798
13.3.3.	Physical Interpretation of the Absence of the Carnot Efficiency Factor in Electrochemical Energy Conversion . . . . .	1799
13.3.4.	Cold Combustion . . . . .	1801
13.4.	Kinetics of Fuel Cell Reactions . . . . .	1802
13.4.1.	Making $V$ near $V_e$ Is the Central Problem of Electrochemical Energy Conversion . . . . .	1802
13.4.2.	Electrochemical Parameters That Must Be Optimized for Good Energy Conversion . . . . .	1806
13.4.3.	The Power Output of an Electrochemical Energy Converter . . . . .	1808
13.4.4.	The Electrochemical Engine . . . . .	1810
13.4.5.	Electrodes Burning Oxygen from Air . . . . .	1811
13.5.	Porous Electrode . . . . .	1811
13.5.1.	Special Configurations of Electrodes in Electrochemical Energy Converters . . . . .	1811
13.6.	Types of Fuel Cells . . . . .	1814
13.6.1.	What Is Known So Far about Fuel Cells—Electrochemical Energy Converters . . . . .	1814
13.6.2.	General Aspects of the Practical Fuel Cells . . . . .	1815
13.6.2.1.	The Cells . . . . .	1815
13.6.2.2.	Efficiency of Energy Conversion and the Tafel Equation . . . . .	1816
13.6.3.	Alkaline Fuel Cells . . . . .	1817
13.6.4.	Phosphoric Acid Fuel Cells . . . . .	1818
13.6.5.	High-Temperature Fuel Cells . . . . .	1821
13.6.6.	Solid Polymer Electrolyte Fuel Cell . . . . .	1824
13.7.	Electrochemical Engines for Vehicular Transportation . . . . .	1826
13.7.1.	The Electrochemical Engine . . . . .	1826
13.7.2.	The Re-former . . . . .	1827
13.7.3.	Development of the Proton-Exchange Membrane Fuel Cell for Use in Automotive Transportation . . . . .	1830
13.7.3.1.	General . . . . .	1830

13.7.3.2.	Fundamental Research that Underlay Development of this Cell . . . . .	1830
13.7.4.	The Electric Car Schematic . . . . .	1835
13.7.5.	A Chord of Continuity . . . . .	1835
13.8.	Hybrids Involving Fuel Cells, Batteries, etc. . . . .	1837
13.9.	Direct MeOH Fuel Cells . . . . .	1838
13.10.	General Development of a Fuel Cell-Based Technology . . . . .	1839
13.10.1.	Fuel Cell Power Plants . . . . .	1839
13.10.2.	Household Energy . . . . .	1840
13.10.3.	Vehicular Transportation . . . . .	1840
13.10.4.	Railways . . . . .	1840
13.10.5.	Seagoing Vessels . . . . .	1841
13.10.6.	Aircraft . . . . .	1841
13.10.7.	Industry . . . . .	1841
13.10.8.	Space . . . . .	1842
13.11.	The Second Fuel Cell Principle . . . . .	1842
13.12.	Midway: The Need to Reduce Massive CO <sub>2</sub> Emissions from Man-Made Sources . . . . .	1845
13.13.	Fuel Cells: The Summary . . . . .	1846
	Further Reading . . . . .	1849
13.14.	Electrochemical Energy Storage . . . . .	1851
13.14.1.	Introduction . . . . .	1851
13.15.	A Few Highlights in the Development of Batteries . . . . .	1854
13.15.1.	History . . . . .	1854
13.16.	Properties of Electrochemical Energy Storers . . . . .	1855
13.16.1.	The Discharge Plot . . . . .	1855
13.16.2.	The Ragone Plot . . . . .	1856
13.16.3.	Measures of Battery Performance . . . . .	1857
13.16.4.	Charging and Discharging a Battery . . . . .	1859
13.17.	Some Individual Batteries . . . . .	1859
13.17.1.	Introduction . . . . .	1859
13.17.2.	Classical Batteries . . . . .	1860
	13.17.2.1. Lead-Acid . . . . .	1860
	13.17.2.2. Nickel-Cadmium . . . . .	1861
	13.17.2.3. Zinc-Manganese Dioxide . . . . .	1862
13.17.3.	Modern Batteries . . . . .	1870
	13.17.3.1. Zinc-Air . . . . .	1870
	13.17.3.2. Nickel-Metal Hydride . . . . .	1872
	13.17.3.3. Li . . . . .	1874
13.17.4.	Some Batteries for Special Purposes . . . . .	1877

13.18.	The View Ahead with Batteries . . . . .	1880
13.18.1.	General . . . . .	1880
13.19.	Electrochemical Capacitors as Energy Storers . . . . .	1881
13.19.1.	Introduction . . . . .	1881
13.19.2.	Can the Energy Storage Possibilities with Electrochemical Condensers be Greatly Increased? . . . . .	1884
13.19.3.	Projected Uses of Electrochemical Capacitors . . . . .	1885
13.20.	Batteries: An Overview . . . . .	1886
	Further Reading . . . . .	1888

## CHAPTER 14

### BIOELECTROCHEMISTRY

14.1.	Bioelectrodeics . . . . .	1903
14.1.1.	Introduction . . . . .	1903
14.1.2.	Useful Preliminaries . . . . .	1904
	14.1.2.1. Size . . . . .	1904
14.1.3.	Why Should Electrochemists Be Interested in Amino Acids, Proteins, and DNA? . . . . .	1907
14.1.4.	Cells, Membranes, and Mitochondria . . . . .	1908
14.2.	Membrane Potentials . . . . .	1910
14.2.1.	Preliminary . . . . .	1910
14.2.2.	Simplistic Theories of Membrane Potentials . . . . .	1914
14.2.3.	Modern Approaches to the Theory of Membrane Potentials . . . . .	1915
14.3.	Electrical Conduction in Biological Organisms . . . . .	1918
14.3.1.	Electronic . . . . .	1918
14.3.2.	Protonic . . . . .	1921
14.4.	The Electrochemical Mechanisms of the Nervous System: An Unfinished Section . . . . .	1922
14.4.1.	General . . . . .	1922
14.4.2.	Facts . . . . .	1924
14.4.3.	The Rise and Fall of the Theory of the Spike Potential . . . . .	1927
14.5.	Interfacial Electron Transfer in Biological Systems . . . . .	1933
14.5.1.	Introduction . . . . .	1933
14.5.2.	Adsorption of Proteins onto Metals from Solution . . . . .	1933
14.5.3.	Electron Transfer from Modified Metals to Dissolved Protein in Solution . . . . .	1937
14.5.4.	Electron Transfer from Biomaterials to Simple Redox Ions in Solution . . . . .	1942

14.5.5.	Theoretical Aspects of Electron Transfer from Solid Proteins to Ions in Solution . . . . .	1944
14.5.6.	Conduction and Electron Transfer in Biological Systems: Retrospect and Prospect . . . . .	1944
	Further Reading . . . . .	1948
14.6.	Electrochemical Communication in Biological Organisms . . . . .	1950
14.6.1.	Introduction . . . . .	1950
14.6.2.	Chemical Signaling . . . . .	1953
14.6.3.	Electrical Signaling . . . . .	1954
	14.6.3.1. Introduction . . . . .	1954
	14.6.3.2. Sensitivity of Biological Organisms to Minute Electric Field Strengths . . . . .	1955
	14.6.3.3. Signaling . . . . .	1955
	14.6.3.4. Carcinogenesis . . . . .	1955
14.7.	Enzymes as Electrodes . . . . .	1957
14.7.1.	Preliminary . . . . .	1957
14.7.2.	What Are Enzymes? . . . . .	1960
14.7.3.	Electrodes Carrying Enzymes . . . . .	1960
14.7.4.	The Electrochemical Enzyme-Catalyzed Oxidation of Styrene . . . . .	1963
14.8.	Metabolism . . . . .	1964
14.8.1.	An Abnormally Efficient Process of Energy Conversion . . . . .	1964
14.8.2.	Williams Model . . . . .	1965
14.8.3.	Development of the Fuel Cell Model in Biological Energy Conversion . . . . .	1967
14.8.4.	Distribution and Storage . . . . .	1968
14.9.	Electrochemical Aspects of Some Bioprocesses . . . . .	1969
14.9.1.	Introduction . . . . .	1969
14.9.2.	Superoxide as a Pretoxin . . . . .	1970
14.9.3.	Cardiovascular Diseases . . . . .	1970
14.9.4.	The Effects of Electromagnetic Radiation on Biological Organisms . . . . .	1971
14.9.5.	Microbial Effects . . . . .	1974
	14.9.5.1. Bactericidal . . . . .	1974
	14.9.5.2. Fuel-Cell Related . . . . .	1975
14.9.6.	Electrochemical Growth of Bones and Related Phenomena . . . . .	1975
14.9.7.	Electroanalgesia . . . . .	1976
14.9.8.	Other Effects . . . . .	1976
14.10.	Monitoring Neurotransmitters in the Intact Brain and Other Single- Cell Studies . . . . .	1976
14.10.1.	Introduction . . . . .	1976
14.11.	Summary: Medical Effects, Brain, and Single-Cell Experiments . . . . .	1979
	Further Reading . . . . .	1980

## CHAPTER 15

### ENVIRONMENTALLY ORIENTED ELECTROCHEMISTRY

15.1.	The Environmental Situation . . . . .	1989
15.2.	The Electrochemical Advantage . . . . .	1992
15.3.	Global Warming . . . . .	1993
15.3.1.	Facts . . . . .	1993
15.3.2.	The Solar-Hydrogen Solution . . . . .	1996
15.3.2.1.	The Ideas . . . . .	1996
15.3.3.	The Electrochemistry of Water Splitting . . . . .	1999
15.3.4.	The Electrolysis of Sea Water . . . . .	2002
15.3.5.	Superelectrolyzers . . . . .	2003
15.3.6.	Photoelectrochemical Splitting of Water . . . . .	2004
15.4.	Large-Scale Solar-Hydrogen Production . . . . .	2004
15.4.1.	Solar-Hydrogen Farms . . . . .	2004
15.5.	The Electrochemical Transport System . . . . .	2008
15.5.1.	Introduction . . . . .	2008
15.5.2.	Electrochemically Powered Cars . . . . .	2010
15.5.3.	The Fuel Cell . . . . .	2011
15.6.	The Fixing of CO <sub>2</sub> . . . . .	2012
15.6.1.	Introduction . . . . .	2012
15.6.2.	The Possible Reduction Product . . . . .	2013
15.6.3.	Reduction of CO <sub>2</sub> on Metals . . . . .	2013
15.6.4.	The Mechanism of CO <sub>2</sub> Reduction . . . . .	2015
15.6.5.	Photoelectrochemical Reduction of CO <sub>2</sub> . . . . .	2017
15.6.6.	Conversion of an Organic Compound in Photoelectrochemical Fixing . . . . .	2019
15.6.7.	Prospects in the Electrochemical Reduction of CO <sub>2</sub> . . . . .	2020
15.7.	Removal of Wastes . . . . .	2022
15.7.1.	Introduction . . . . .	2022
15.7.2.	Waste Water . . . . .	2023
15.7.3.	Sulfur Dioxide . . . . .	2023
15.7.4.	Removal of Metals: Aquifers . . . . .	2024
15.7.5.	The Destruction of Nitrates . . . . .	2025
15.7.6.	Electrochemical Treatment of Low-Level, Nuclear Wastes . . . . .	2026
15.7.7.	Mediator-Aided Destruction of Organic Wastes (Particularly Toxic, Organic Waste) . . . . .	2028
15.7.8.	Bactericidal Effects . . . . .	2031
15.7.9.	The Special Problem of H <sub>2</sub> S . . . . .	2031
15.7.9.1.	Introduction . . . . .	2031
15.7.9.2.	Electrochemical Devolatilization of H <sub>2</sub> S . . . . .	2031

15.7.9.3.	Photoelectrochemical Decomposition of $H_2S$ . . . . .	2033
15.7.10.	Electrochemical Sewage Disposal . . . . .	2033
15.7.11.	Electrochemical Decontamination of Soil . . . . .	2035
15.7.11.1.	Introduction . . . . .	2035
15.7.11.2.	The Mechanism . . . . .	2035
15.7.11.3.	Experimental Work . . . . .	2036
15.7.11.4.	Summary on Soil Remediation . . . . .	2037
15.8.	Retrospect and Prospect . . . . .	2038
15.9.	A Parting Word . . . . .	2039
