

INTERNATIONAL EDITION

ELEMENTS OF

X-RAY
DIFFRACTION

THIRD EDITION

B. D. Cullity and S. R. Stock

Table of Contents

Preface	xvii
-------------------	------

Chapter 1 Properties of X-Rays 1

1-1 Introduction	1
1-2 Electromagnetic Radiation	2
1-3 The Continuous Spectrum	4
1-4 The Characteristic Spectrum	7
1-5 Absorption	11
1-6 Filters	18
1-7 Production of X-Rays	19
Gas Tubes	20
Filament Tubes	20
Focal Spot	22
Power Rating	23
Rotating-Anode Tubes	23
Microfocus Tubes	23
Pulsed (Or Flash) Tubes	24
Miniature Tubes	24
High Voltage Tubes and Linear Accelerators	24
Synchrotron Radiation	24
1-8 Detection of X-Rays	27
1-9 Safety Precautions	27
Electric Shock	27
Radiation Hazard	27
Problems	28

Chapter 2 Geometry of Crystals 31

2-1 Introduction	31
2-2 Lattices	31
2-3 Designation of Points, Lines, and Planes	35
2-4 Reciprocal Lattice	38

2-5 Symmetry	40
2-6 Crystal Systems	43
2-7 Primitive and Nonprimitive Cells	47
2-8 Indexing in the Hexagonal System	51
2-9 Crystal Structure	52
2-10 Atom Sizes and Coordination	63
2-11 Crystal Shape	65
2-12 Crystal Defects	66
Annealing Twins	67
Deformation Twins	69
General	70
2-13 The Stereographic Projection	70
Problems	86

Chapter 3 Diffraction I: Geometry 89

3-1 Introduction	89
3-2 Diffraction	90
3-3 Bragg's Law	95
3-4 Laue's Equations	96
3-5 Reciprocal Lattice and Diffraction	98
3-6 Diffraction Directions	101
3-7 X-Ray Spectroscopy	103
3-8 Diffraction Methods	106
Laue Method	107
Powder Method	113
3-9 Experimental Visualization of the Reciprocal Lattice	118
3-10 Diffraction Under Nonideal Conditions	120
Problems	122

Chapter 4 Diffraction II: Intensities 123

4-1 Introduction	123
4-2 Scattering by an Electron	124
4-3 Scattering by an Atom	128
4-4 Scattering by a Unit Cell	131
4-5 Some Useful Relations	137
4-6 Structure-Factor Calculations	138
4-7 Application To Polycrystal Diffraction	144
4-8 Multiplicity Factor	145
4-9 Lorentz Factor	145
4-10 Absorption Factor	150
Hull/Debye-Scherrer Camera	150

Diffractometer	152
4-11 Temperature Factor	154
4-12 Intensities of Diffraction Peaks From Polycrystalline Samples	157
Hull/Debye–Scherrer Camera	157
Diffractometer	158
Qualifications	158
4-13 Examples of Intensity Calculations	159
4-14 Reciprocal Space and Diffracted Intensities	162
4-15 Measurement of X-Ray Intensity	164
Problems	165

Chapter 5 Diffraction III: Real Samples 167

5-1 Introduction	167
5-2 Crystallite Size	167
5-3 Interference Function	171
5-4 Strain	174
5-5 Perfect Crystals	177
5-6 Amorphous and Partially Crystalline Samples	182
Problems	183

Chapter 6 Diffractometer Measurements 185

6-1 Introduction	185
6-2 General Features	186
6-3 X-Ray Optics	194
6-4 Detectors (General)	198
Counting Losses	198
Counting Efficiency	200
Energy Resolution	201
6-5 Proportional Counters	202
6-6 Geiger Counters	206
6-7 Scintillation Detectors	207
6-8 Semiconductor Detectors	208
6-9 Pulse-Height Analysis	211
Pulse-Height Discriminator	212
Single-Channel Pulse-Height Analyzer	213
Multichannel Pulse-Height Analyzer	215
6-10 Special Kinds of Diffractometry	215
Energy-Dispersive Diffractometry	216
Position-Sensitive Diffractometry	217
6-11 Scalers	218
6-12 Ratemeters	222

6-13 Monochromatic Operation	225
Monochromating Crystal	225
Balanced Filters	229
6-14 Determination of Diffraction Peak Positions	231
Problems	234

Chapter 7 Powder Photographs 235

7-1 Introduction	235
7-2 Hull/Debye–Scherrer Method	236
7-3 Specimen Preparation	239
7-4 Film and Other Detection Media	240
Fluorescent Screens	240
Photographic Film	241
Image Plates	241
7-5 Film Loading	243
7-6 Cameras For Special Conditions	245
High-Temperature Cameras	245
Low-Temperature Cameras	246
High-Pressure Cameras	246
7-7 Seemann–Bohlin Camera	246
7-8 Back-Reflection Focusing Cameras	248
7-9 Pinhole Photographs	251
7-10 Microbeams and Microcameras	255
7-11 Choice of Radiation	255
7-12 Background Radiation	256
7-13 Crystal Monochromators	258
7-14 Guinier Cameras [G.13, G.17]	258
7-15 Measurement of Line Position	259
7-16 Measurement of Line Intensity	260
Problems	261

Chapter 8 Laue Photographs 263

8-1 Introduction	263
8-2 Cameras	264
Transmission Camera	264
Back-Reflection Camera	265
General	266
8-3 Specimens and Holders	268
8-4 Collimators	270
8-5 The Shapes of Laue Spots	272
Problems	273

Chapter 9 Phase Identification By X-Ray Diffraction 275

9-1 Introduction	275
9-2 Basic Principles	276
9-3 Powder Diffraction File	276
Hanawalt Method	277
Fink Method	279
9-4 Procedure	279
9-5 Identification of Single Phase Samples	280
9-6 Identification of Phases in Mixtures	282
9-7 Computerized Search-Match	288
9-8 Practical Difficulties	291
Problems	293

Chapter 10 Determination of Crystal Structure 295

10-1 Introduction	295
10-2 Preliminary Treatment of Data	297
10-3 Indexing Patterns of Cubic Crystals	299
10-4 Indexing Patterns of Noncubic Crystals	302
Tetragonal System	303
Hexagonal System	303
Orthorhombic System	305
Monoclinic and Triclinic Systems	306
General	306
10-5 The Effect of Cell Distortion on the Powder Pattern	306
10-6 Determination of the Number of Atoms in a Unit Cell	308
10-7 Determination of Atom Positions	309
10-8 Example of Structure Determination	311
10-9 Order-Disorder Determination	315
10-10 Long-Range Order	315
10-11 Short-Range Order and Clustering	326
Problems	328

Chapter 11 Phase-Diagram Determination 331

11-1 Introduction	331
11-2 General Principles	332
11-3 Solid Solutions	337
11-4 Determination of Solvus Curves (Disappearing-Phase Method)	340
11-5 Determination of Solvus Curves (Parametric Method)	342
Problems	345

Chapter 12 Quantitative Phase Analysis 347

12-1 Introduction	347
12-2 Chemical Analysis by Parameter Measurement	347
12-3 Basic Principles of Multiphase Quantitative Analysis	348
12-4 External Standard Method	349
12-5 Direct Comparison Method	351
12-6 Internal Standard Method	355
12-7 Other Methods	358
12-8 Practical Difficulties	359
Problems	361

Chapter 13 Precise Parameter Measurements 363

13-1 Introduction	363
13-2 Diffractometers	365
13-3 Hull/Debye–Scherrer Cameras	369
13-4 Back–Reflection Focusing Cameras	374
13-5 Pinhole Cameras	374
13-6 Example	375
13-7 Cohen’s Method	376
Cubic System	377
13-8 General	382
Problems	383

Chapter 14 Structure of Polycrystalline Aggregates 385

14-1 Introduction	385
Crystal Size and Quality	386
14-2 Grain Size	386
14-3 Crystallite Size	388
14-4 Crystal Quality (Microstrain)	390
14-5 Depth of X-Ray Penetration	396
14-6 Size and Strain Separation	399
Crystal Orientation	402
14-7 General	402
Fiber Texture	403
Sheet Texture	404
Pole Figures	404
14-8 The Texture of Wire (Area Detector Method)	407
14-9 The Texture of Sheet (Diffractometer Methods)	411
Transmission Methods	412
Reflection Methods	416
Plotting the Pole Figure	419

14-10 The Texture of Wire (Diffractometer Method)	423
14-11 Inverse Pole Figures	427
14-12 Orientation Distribution Functions	429
14-13 Amorphous and Semi-Amorphous Solids	431
14-14 Summary	431
Problems	432

Chapter 15 Stress Measurement 435

15-1 Introduction	435
15-2 Applied Stress and Residual Stress	436
15-3 General Principles	439
15-4 Elasticity	443
15-5 Biaxial and Triaxial Stress Analysis	446
15-6 Diffractometer Method	450
Measurement of Line Position	454
Specimen Preparation	455
Measurement of Stress as a Function of Depth	455
Variant Techniques	456
Special Diffractometers	457
15-7 Photographic or Area Detector Method	459
15-8 Calibration	463
15-9 Precision and Accuracy	465
Precision	465
Accuracy	466
15-10 Practical Difficulties	467
Large Grain Size	467
Preferred Orientation	467
Plastic Deformation	468
Problems	469

Chapter 16 Orientation of Single Crystals 471

16-1 Introduction	471
16-2 Back-Reflection Laue Method	471
16-3 Transmission Laue Method	487
16-4 Diffractometer Method	490
16-5 Setting a Crystal in a Required Orientation	496
Problems	500

Chapter 17 Crystal Quality 503

17-1 Introduction	503
-----------------------------	-----

17-2 Laue Methods	503
Ordinary Laue Methods	503
17-3 Topographic and Other Methods	511
Effect of Extinction	512
Diffraction Contrast	513
Berg-Barrett Method	517
Lang Method	519
Polychromatic or White Beam Topography	522
Double Crystal Topography	524
17-4 Multiple Axis Diffractometry	526
17-5 Remarks	537
Problems	538
Chapter 18 Polymers	539
18-1 Introduction	539
18-2 Polymer Structure	540
18-3 Wide-Angle Diffraction	544
18-4 Wide-Angle Scattering	550
18-5 Summary	553
Problems	553
Chapter 19 Small Angle Scattering	555
19-1 Introduction	555
19-2 Long Period Structures	556
19-3 Scattered Intensity	557
19-4 Guinier Region	559
19-5 Porod Region	562
19-6 Small Angle Scattering Apparatus	564
19-7 Examples	567
Chapter 20 Transmission Electron Microscopy	571
20-1 Introduction	571
20-2 Electron Interactions with Electric and Magnetic Fields	571
20-3 Electron Gun	572
20-4 Magnetic Lenses	573
20-5 Transmission Electron Microscopes	575
20-6 Kikuchi Lines	580
20-7 Convergent Beam Diffraction Patterns	581
20-8 Imaging and Amplitude Contrast	585
20-9 Imaging and Phase Contrast	591

General References	593
Chapter References	593
Appendix 1: The Reciprocal Lattice.	613
Appendix 2: Electron and Neutron Diffraction	629
Appendix 3: Lattice Geometry	633
Appendix 4: The Rhombohedral-Hexagonal Transformation	636
Appendix 5: Crystal Structure of Some Elements	638
Appendix 6: Crystal Structures of Compounds and Solid Solutions	640
Appendix 7: X-Ray Wavelengths	641
Appendix 8: Mass Absorption Coefficients and Densities	644
Appendix 9: Quadratic Forms of Miller Indices	646
Appendix 10: Atomic Scattering Factors	648
Appendix 11: Multiplicity Factors for the Powder Method	651
Appendix 12: Lorentz-Polarization Factor	652
Appendix 13: Data for Calculation of the Temperature Factor	654
Appendix 14: Atomic Weights	655
Appendix 15: Physical Constants	656
Answers to Selected Problems	657
Index	661
