

The background of the book cover is a microscopic image showing numerous dark, spherical polymer beads of varying sizes, some connected by thin, dark lines, suggesting a network or chain structure. The image is in grayscale and has a grainy, high-magnification texture.

INTRODUCTION TO
PHYSICAL
POLYMER
SCIENCE

L. H. SPERLING

THIRD
EDITION

CONTENTS

Preface	xxv
Preface to the Second Edition	xxvii
Preface to the First Edition	xxix
Symbols and Definitions	xxxi
1 Introduction to Polymer Science	1
1.1 From Little Molecules to Big Molecules / 2	
1.2 Molecular Weight and Molecular Weight Distributions / 5	
1.2.1 Effect on Tensile Strength / 5	
1.2.2 Molecular Weight Averages / 6	
1.3 Major Polymer Transitions / 7	
1.4 Polymer Synthesis and Structure / 9	
1.4.1 Chain Polymerization / 9	
1.4.1.1 <i>Free Radical Polymerization</i> / 9	
1.4.1.2 <i>Initiation</i> / 9	
1.4.1.3 <i>Propagation</i> / 10	
1.4.1.4 <i>Termination</i> / 10	
1.4.1.5 <i>Structure and Nomenclature</i> / 11	
1.4.2 Step Polymerization / 11	
1.4.2.1 <i>A Polyester Condensation Reaction</i> / 11	
1.4.2.2 <i>Stepwise Nomenclature and Structures</i> / 14	
1.4.2.3 <i>Natural Product Polymers</i> / 16	
1.5 Cross-Linking, Plasticizers, and Fillers / 16	
1.6 The Macromolecular Hypothesis / 17	
1.7 Historical Development of Industrial Polymers / 18	
1.8 Molecular Engineering / 19	
References / 19	
General Reading / 20	

Handbooks, Encyclopedias, and Dictionaries / 21

Web Sites / 21

Study Problems / 22

Appendix 1.1 Names for Polymers / 23

2 Chain Structure and Configuration

25

- 2.1 Examples of Configurations and Conformations / 26
 - 2.1.1 Head-to-Head and Head-to-Tail Configurations / 26
 - 2.1.2 *Trans*–*Gauche* Conformations / 26
- 2.2 Theory and Instruments / 27
 - 2.2.1 Chemical Methods of Determining Microstructure / 27
 - 2.2.2 General Physical Methods / 28
 - 2.2.3 Infrared and Raman Spectroscopic Characterization / 29
 - 2.2.4 Nuclear Magnetic Resonance Methods / 30
- 2.3 Stereochemistry of Repeating Units / 31
 - 2.3.1 Chiral Centers / 31
 - 2.3.2 Tacticity in Polymers / 31
 - 2.3.3 Meso- and Racemic Placements / 34
 - 2.3.4 Proton Spectra by NMR / 34
- 2.4 Repeating Unit Isomerism / 36
 - 2.4.1 Optical Isomerism / 36
 - 2.4.2 Geometric Isomerism / 37
 - 2.4.3 Substitutional Isomerism / 38
 - 2.4.4 Infrared and Raman Spectroscopic Characterization / 38
- 2.5 Common Types of Copolymers / 40
 - 2.5.1 Unspecified Copolymers / 40
 - 2.5.2 Statistical Copolymers / 41
 - 2.5.3 Random Copolymers / 41
 - 2.5.4 Alternating Copolymers / 41
 - 2.5.5 Periodic Copolymers / 41
- 2.6 NMR in Modern Research / 42
 - 2.6.1 Dilute Solution Studies: Mer Distribution / 42
 - 2.6.2 High-Resolution NMR in the Solid State / 43
- 2.7 Multicomponent Polymers / 45
 - 2.7.1 Block Copolymers / 45
 - 2.7.2 Graft Copolymers / 45
 - 2.7.3 AB–Cross-linked Copolymer / 48
 - 2.7.4 Interpenetrating Polymer Networks / 48
 - 2.7.5 Other Polymer–Polymer Combinations / 48
 - 2.7.6 Separation and Identification of Multicomponent Polymers / 48

- 2.8 Conformational States in Polymers / 48
- 2.9 Analysis of Polymers during Mechanical Strain / 50
- 2.10 Photophysics of Polymers / 52
 - 2.10.1 Quenching Phenomena / 52
 - 2.10.2 Excimer Formation / 53
 - 2.10.3 Experimental Studies / 53
 - 2.10.3.1 *Microstructure of Polystyrene* / 53
 - 2.10.3.2 *Excimer Stability* / 55
- 2.11 Configuration and Conformation / 56
 - References / 57
 - General Reading / 58
 - Study Problems / 58
 - Appendix 2.1 Assorted Isomeric and Copolymer Macromolecules / 60

3 Molecular Weights and Sizes

63

- 3.1 Introduction / 63
 - 3.1.1 Polymer Size and Shape / 63
 - 3.1.2 How Does a Polymer Dissolve? / 64
- 3.2 The Solubility Parameter / 65
 - 3.2.1 Solubility Parameter Tables / 66
 - 3.2.2 Experimental Determination / 66
 - 3.2.3 Theoretical Calculation: An Example / 68
- 3.3 Thermodynamics of Mixing / 70
 - 3.3.1 Types of Solutions / 70
 - 3.3.1.1 *The Ideal Solution* / 70
 - 3.3.1.2 *Statistical Thermodynamics of Mixing* / 70
 - 3.3.1.3 *Other Types of Solutions* / 72
 - 3.3.2 Dilute Solutions / 73
 - 3.3.3 Values for the Flory–Huggins χ_1 Parameter / 74
 - 3.3.4 A Worked Example for the Free Energy of Mixing / 75
- 3.4 Molecular Weight Averages / 76
- 3.5 Determination of the Number-Average Molecular Weight / 77
 - 3.5.1 End-Group Analyses / 77
 - 3.5.2 Colligative Properties / 77
 - 3.5.3 Osmotic Pressure / 78
 - 3.5.3.1 *Thermodynamic Basis* / 78
 - 3.5.3.2 *Instrumentation* / 78
 - 3.5.3.3 *The Flory θ -Temperature* / 79
- 3.6 Weight-Average Molecular Weights and Radii of Gyration / 79
 - 3.6.1 Scattering Theory and Formulations / 82

3.6.2	The Appropriate Angular Range /	84
3.6.3	The Zimm Plot /	87
3.6.4	Polymer Chain Dimensions /	88
3.6.5	Scattering Data /	89
3.6.6	Dynamic Light-Scattering /	90
3.7	Molecular Weights of Polymers /	90
3.7.1	Molecular Weight of Commercial Polymers /	90
3.7.2	Thermodynamics and Kinetics of Polymerization /	91
3.7.2.1	<i>Thermodynamics of Chain Polymerization</i> /	91
3.7.2.2	<i>Kinetics of Chain Polymerization</i> /	92
3.7.2.3	<i>Thermodynamics of Step Polymerization</i> /	93
3.7.2.4	<i>Kinetics of Step Polymerizations</i> /	93
3.7.3	Molecular Weight Distributions /	94
3.7.4	Gelation and Network Formation /	95
3.8	Intrinsic Viscosity /	96
3.8.1	Definition of Terms /	97
3.8.2	The Equivalent Sphere Model /	98
3.8.3	The Mark-Houwink Relationship /	100
3.8.4	Intrinsic Viscosity Experiments /	101
3.8.5	Example Calculation Involving Intrinsic Viscosity /	102
3.9	Gel Permeation Chromatography /	103
3.9.1	Theory of Gel Permeation Chromatography /	105
3.9.2	Utilization of Distribution Coefficients of GPC and HPLC /	106
3.9.3	Types of Chromatography /	107
3.9.4	GPC Instrumentation /	107
3.9.5	Calibration /	109
3.9.6	Selected Current Research Problems /	110
3.9.7	The Universal Calibration /	112
3.10	Mass Spectrometry /	113
3.11	Solution Thermodynamics and Molecular Weights /	115
	References /	116
	General Reading /	119
	Study Problems /	119
Appendix 3.1	Calibration and Application of Light-Scattering Instrumentation for the Case Where $P(\theta)=1$ /	121

4 Concentrated Solutions and Phase Separation Behavior

123

4.1	Phase Separation and Fractionation /	123
4.1.1	Motor Oil Viscosity Example /	123

4.1.2	Polymer–Solvent Systems /	125
4.1.3	Vitrification Effects /	127
4.2	Regions of the Polymer–Solvent Phase Diagram /	127
4.3	Polymer–Polymer Phase Separation /	130
4.3.1	Phase Diagrams /	131
4.3.2	Thermodynamics of Phase Separation /	132
4.3.3	An Example Calculation: Molecular Weight Miscibility Limit /	133
4.3.4	Equation of State Theories /	134
4.3.5	Kinetics of Phase Separation /	136
4.3.6	Miscibility in Statistical Copolymer Blends /	138
4.3.7	Polymer Blend Characterization /	141
4.3.8	Graft Copolymers and IPNs /	143
4.3.9	Block Copolymers /	145
4.3.10	Example Calculations with Block Copolymers /	147
4.3.11	Ionomers /	147
4.4	Diffusion and Permeability in Polymers /	148
4.4.1	Swelling Phenomena /	148
4.4.2	Fick’s Laws /	148
4.4.3	Permeability Units /	150
4.4.4	Permeability Data /	150
4.4.5	Effect of Permeant Size /	151
4.4.6	Permselectivity of Polymeric Membranes and Separations /	152
4.4.6.1	<i>Types of Membranes</i> /	152
4.4.6.2	<i>Gas Separations</i> /	153
4.5	Latexes and Suspensions /	154
4.5.1	Natural Rubber Latex /	156
4.5.2	Colloidal Stability and Film Formation /	156
4.6	Multicomponent and Multiphased Materials /	156
	References /	157
	General Reading /	159
	Study Problems /	160
	Appendix 4.1 Scaling Law Theories and Applications /	161

5 The Amorphous State

165

5.1	The Amorphous Polymer State /	166
5.1.1	Solids and Liquids /	166
5.1.2	Possible Residual Order in Amorphous Polymers? /	166
5.2	Experimental Evidence Regarding Amorphous Polymers /	167
5.2.1	Short-Range Interactions in Amorphous Polymers /	167
5.2.2	Long-Range Interactions in Amorphous Polymers /	170
5.2.2.1	<i>Small-Angle Neutron Scattering</i> /	170

	5.2.2.2	<i>Electron and X-Ray Diffraction</i>	/ 173
	5.2.2.3	<i>General Properties</i>	/ 176
5.3		Conformation of the Polymer Chain	/ 176
	5.3.1	Models and Ideas	/ 176
		5.3.1.1	<i>The Freely Jointed Chain</i> / 176
		5.3.1.2	<i>Kuhn Segments</i> / 179
	5.3.2	The Random Coil	/ 179
	5.3.3	Models of Polymer Chains in the Bulk Amorphous State	/ 179
5.4		Macromolecular Dynamics	/ 182
	5.4.1	The Rouse–Bueche Theory	/ 183
	5.4.2	Reptation and Chain Motion	/ 184
		5.4.2.1	<i>The de Gennes Reptation Theory</i> / 184
		5.4.2.2	<i>Fickian and Non-Fickian Diffusion</i> / 187
	5.4.3	Nonlinear Chains	/ 187
	5.4.4	Experimental Methods of Determining Diffusion Coefficients	/ 188
5.5		Concluding Remarks	/ 190
		References	/ 191
		General Reading	/ 193
		Study Problems	/ 193
	Appendix 5.1	History of the Random Coil Model for Polymer Chains	/ 195
	Appendix 5.2	Calculations Using the Diffusion Coefficient	/ 198
	Appendix 5.3	Nobel Prize Winners in Polymer Science and Engineering	/ 199

6 The Crystalline State

201

6.1		General Considerations	/ 201
	6.1.1	Historical Aspects	/ 202
	6.1.2	Melting Phenomena	/ 203
	6.1.3	Example Calculation of Percent Crystallinity	/ 206
6.2		Methods of Determining Crystal Structure	/ 206
	6.2.1	A Review of Crystal Structure	/ 206
	6.2.2	X-Ray Methods	/ 207
	6.2.3	Electron Diffraction of Single Crystals	/ 208
	6.2.4	Infrared Absorption	/ 208
	6.2.5	Raman Spectra	/ 209
6.3		The Unit Cell of Crystalline Polymers	/ 209
	6.3.1	Polyethylene	/ 210

6.3.2	Other Polyolefin Polymers /	211
6.3.3	Polar Polymers and Hydrogen Bonding /	212
6.3.4	Polymorphic Forms of Cellulose /	213
6.3.5	Principles of Crystal Structure Determination /	216
6.4	Structure of Crystalline Polymers /	217
6.4.1	The Fringed Micelle Model /	217
6.4.2	Polymer Single Crystals /	218
6.4.2.1	<i>The Folded-Chain Model</i> /	218
6.4.2.2	<i>The Switchboard Model</i> /	220
6.5	Crystallization from the Melt /	220
6.5.1	Spherulitic Morphology /	220
6.5.2	Mechanism of Spherulite Formation /	225
6.5.3	Spherulites in Polymer Blends and Block Copolymers /	225
6.5.4	Percent Crystallinity in Polymers /	227
6.6	Kinetics of Crystallization /	230
6.6.1	Experimental Observations of Crystallization Kinetics /	230
6.6.2	Theories of Crystallization Kinetics /	233
6.6.2.1	<i>The Avrami Equation</i> /	233
6.6.2.2	<i>Keith–Padden Kinetics of Spherulitic Crystallization</i> /	236
6.6.2.3	<i>Hoffman's Nucleation Theory</i> /	238
6.6.2.4	<i>Example Calculation of the Fold Surface Free Energy</i> /	239
6.6.2.5	<i>Three Regimes of Crystallization Kinetics</i> /	239
6.7	The Reentry Problem in Lamellae /	243
6.7.1	Infrared Spectroscopy /	243
6.7.2	Carbon-13 NMR /	244
6.7.3	Small-Angle Neutron Scattering /	244
6.7.3.1	<i>Single-Crystal Studies</i> /	244
6.7.3.2	<i>Melt-Crystallized Polymers</i> /	244
6.7.4	Extended Chain Crystals /	249
6.8	Thermodynamics of Fusion /	251
6.8.1	Theory of Melting Point Depression /	252
6.8.2	Example Calculation of Melting Point Depression /	253
6.8.3	Experimental Thermodynamic Parameters /	254
6.8.4	Entropy of Melting /	254
6.8.5	The Hoffman–Weeks Equilibrium Melting Temperature /	255
6.9	Effect of Chemical Structure on the Melting Temperature /	256
6.10	Fiber Formation and Structure /	258
6.10.1	X-Ray Fiber Diagrams /	260

- 6.10.2 Natural Fibers / 261
- 6.11 The Hierarchical Structure of Polymeric Materials / 262
- 6.12 How Do You Know It's a Polymer? / 263
 - References / 265
 - General Reading / 269
 - Study Problems / 269

7 Polymers in the Liquid Crystalline State

273

- 7.1 Definition of a Liquid Crystal / 273
- 7.2 Rod-Shaped Chemical Structures / 273
- 7.3 Liquid Crystalline Mesophases / 274
 - 7.3.1 Mesophase Topologies / 274
 - 7.3.2 Phase Diagrams / 276
 - 7.3.3 First-Order Transitions / 276
- 7.4 Liquid Crystal Classification / 278
 - 7.4.1 Lyotropic Liquid Crystalline Chemical Structures / 278
 - 7.4.2 Thermotropic Liquid Crystalline Chemical Structures / 281
 - 7.4.3 Side-Chain Liquid Crystalline Chemical Structures / 283
- 7.5 Thermodynamics and Phase Diagrams / 286
 - 7.5.1 Historical Aspects / 286
 - 7.5.2 Importance of the χ_1 Parameter / 287
- 7.6 Mesophase Identification in Thermotropic Polymers / 288
- 7.7 Fiber Formation / 289
 - 7.7.1 Viscosity of Lyotropic Solutions / 289
 - 7.7.2 Molecular Orientation / 289
- 7.8 Comparison of Major Polymer Types / 290
 - 7.8.1 Molecular Conformation / 290
 - 7.8.2 Properties in Bulk / 292
- 7.9 Basic Requirements for Liquid Crystal Formation / 292
 - References / 292
 - General Reading / 293
 - Study Problems / 294

8 Glass–Rubber Transition Behavior

295

- 8.1 Simple Mechanical Relationships / 296
 - 8.1.1 Modulus / 296
 - 8.1.1.1 *Young's Modulus* / 296
 - 8.1.1.2 *Shear Modulus* / 297

- 8.1.2 Newton's Law / 297
- 8.1.3 Poisson's Ratio / 298
- 8.1.4 The Bulk Modulus and Compressibility / 298
- 8.1.5 Relationships among E , G , B , and ν / 299
- 8.1.6 Compliance versus Modulus / 299
- 8.1.7 Numerical Values for E / 300
- 8.1.8 Storage and Loss Moduli / 300
- 8.2 Five Regions of Viscoelastic Behavior / 300
 - 8.2.1 The Glassy Region / 301
 - 8.2.2 The Glass Transition Region / 302
 - 8.2.3 The Rubbery Plateau Region / 303
 - 8.2.4 The Rubbery Flow Region / 304
 - 8.2.5 The Liquid Flow Region / 305
 - 8.2.6 Effect of Plasticizers / 305
 - 8.2.7 Definitions of the Terms "Transition," "Relaxation," and "Dispersion" / 305
 - 8.2.8 Melt Viscosity Relationships Near T_g / 305
 - 8.2.9 Dynamic Mechanical Behavior through the Five Regions / 306
- 8.3 Methods of Measuring Transitions in Polymers / 309
 - 8.3.1 Dilatometry Studies / 310
 - 8.3.2 Thermal Methods / 311
 - 8.3.3 Mechanical Methods / 313
 - 8.3.4 Dielectric and Magnetic Methods / 315
 - 8.3.5 A Comparison of the Methods / 316
 - 8.3.6 The Cole-Cole Plot / 317
- 8.4 Other Transitions and Relaxations / 317
 - 8.4.1 The Schatzki Crankshaft Mechanism / 318
 - 8.4.1.1 *Main-Chain Motions* / 318
 - 8.4.1.2 *Side-Chain Motions* / 318
 - 8.4.2 The T_H Transition / 318
- 8.5 Time and Frequency Effects on Relaxation Processes / 319
 - 8.5.1 Time Dependence in Dilatometric Studies / 320
 - 8.5.2 Time Dependence in Mechanical Relaxation Studies / 320
 - 8.5.3 Frequency Effects in Dynamic Experiments / 322
- 8.6 Theories of the Glass Transition / 323
 - 8.6.1 The Free-Volume Theory / 323
 - 8.6.1.1 T_g as an Iso-Free-Volume State / 324
 - 8.6.1.2 The WLF Equation / 326
 - 8.6.1.3 An Example of WLF Calculations / 330
 - 8.6.2 The Kinetic Theory of the Glass Transition / 331
 - 8.6.2.1 *Estimations of the Free-Volume Hole Size in Polymers* / 331

8.6.2.2	<i>Positron Annihilation Lifetime Spectroscopy</i> / 332
8.6.3	Thermodynamic Theory of T_g / 333
8.6.3.1	<i>The Gibbs and DiMarzio Theory</i> / 333
8.6.3.2	<i>Effect of Cross-link Density on T_g</i> / 335
8.6.3.3	<i>A Summary of the Glass Transition Theories</i> / 335
8.6.3.4	<i>A Unifying Treatment</i> / 337
8.7	Effect of Molecular Weight on T_g / 337
8.7.1	Linear Polymers / 337
8.7.2	Effect of T_g on Polymerization / 338
8.8	Effect of Copolymerization on T_g / 339
8.8.1	One-Phase Systems / 339
8.8.2	Two-Phase Systems / 342
8.9	Effect of Crystallinity on T_g / 343
8.9.1	The Glass Transition of Polyethylene / 344
8.9.2	The Nylon Family Glass Transition / 345
8.9.3	Relationships between T_g and T_f / 345
8.9.4	Heat Distortion Temperature / 346
8.10	Dependence of T_g on Chemical Structure / 347
8.10.1	Effect of Aliphatic Side Groups on T_g / 347
8.10.2	Effect of Tacticity on T_g / 347
8.11	Effect of Pressure on T_g / 349
8.12	Damping and Dynamic Mechanical Behavior / 351
8.13	Definitions of Elastomers, Plastics, Adhesives, and Fibers / 353
	References / 354
	General Reading / 358
	Study Problems / 358
	Appendix 8.1 Molecular Motion near the Glass Transition / 361

9 Cross-linked Polymers and Rubber Elasticity

363

9.1	Cross-links and Networks / 363
9.1.1	The Sol–Gel Transition / 363
9.1.2	Micronetworks / 364
9.2	Historical Development of Rubber / 366
9.2.1	Early Developments / 366
9.2.2	Twentieth-Century Developments / 367
9.3	Rubber Network Structure / 367
9.4	Rubber Elasticity Concepts / 369

- 9.5 Thermodynamic Equation of State / 371
- 9.6 Equation of State for Gases / 374
- 9.7 Statistical Thermodynamics of Rubber Elasticity / 376
 - 9.7.1 The Equation of State for a Single Chain / 376
 - 9.7.2 The Equation of State for a Macroscopic Network / 379
 - 9.7.3 Some Example Calculations / 382
 - 9.7.3.1 *An Example of Rubber Elasticity Calculations* / 382
 - 9.7.3.2 *An Example of Work Done during Stretching* / 382
 - 9.7.4 Comparison to Metal Springs / 382
- 9.8 The “Carnot Cycle” for Elastomers / 383
 - 9.8.1 The Carnot Cycle for a Gas / 383
 - 9.8.2 The Carnot Cycle for an Elastomer / 384
 - 9.8.3 Work and Efficiency / 385
 - 9.8.4 An Elastomer Thermal Cycle Demonstration / 385
- 9.9 Continuum Theories of Rubber Elasticity / 386
 - 9.9.1 The Mooney–Rivlin Equation / 386
 - 9.9.2 Generalized Strain–Energy Functions / 388
- 9.10 Some Refinements to Rubber Elasticity / 391
 - 9.10.1 The Inverse Langevin Function / 391
 - 9.10.2 Cross-link Functionality / 392
 - 9.10.3 Network Defects / 393
 - 9.10.4 Volume Changes and Swelling / 393
 - 9.10.5 Physical Cross-links / 394
 - 9.10.5.1 *Trapped Entanglements* / 394
 - 9.10.5.2 *The Phantom Network* / 396
 - 9.10.6 Small-Angle Neutron Scattering / 396
- 9.11 Internal Energy Effects / 400
 - 9.11.1 Thermoelastic Behavior of Rubber / 400
 - 9.11.2 Experimental Values / 401
- 9.12 The Flory–Rehner Equation / 401
 - 9.12.1 Causes of Swelling / 401
 - 9.12.2 Example Calculation of Young’s Modulus from Swelling Data / 403
- 9.13 Gelation Phenomena in Polymers / 404
 - 9.13.1 Gelation in Solution / 404
 - 9.13.2 Gelation during Polymerization / 406
 - 9.13.3 Hydrogels / 407
- 9.14 Gels and Gelation / 407
- 9.15 Effects of Strain on the Melting Temperature / 409

9.16	Elastomers in Current Use /	411
9.16.1	Classes of Elastomers /	411
9.16.1.1	<i>Diene Types</i> /	411
9.16.1.2	<i>Saturated Elastomers</i> /	411
9.16.1.3	<i>Thermoplastic Elastomers</i> /	412
9.16.1.4	<i>Inorganic Elastomers</i> /	414
9.16.2	Reinforcing Fillers and Other Additives /	414
9.17	Summary of Rubber Elasticity Behavior /	417
	References /	418
	General Reading /	422
	Study Problems /	422
Appendix 9.1	Gelatin as a Physically Cross-linked Elastomer /	424
Appendix 9.2	Elastic Behavior of a Rubber Band /	428
Appendix 9.3	Determination of the Cross-link Density of Rubber by Swelling to Equilibrium /	429

10 Polymer Viscoelasticity and Rheology

433

10.1	Stress Relaxation and Creep /	433
10.1.1	Molecular Bases of Stress Relaxation and Creep /	434
10.1.2	Models for Analyzing Stress Relaxation and Creep /	435
10.1.2.1	<i>The Maxwell and Kelvin Elements</i> /	435
10.1.2.2	<i>The Four-Element Model</i> /	437
10.1.2.3	<i>The Takayanagi Models</i> /	438
10.2	Relaxation and Retardation Times /	440
10.2.1	The Relaxation Time /	440
10.2.2	Applications of Relaxation Times to Chemical Reactions /	441
10.2.2.1	<i>Chemical Stress Relaxation</i> /	441
10.2.2.2	<i>Procedure X</i> /	443
10.2.2.3	<i>Continuous and Intermittent Stress Relaxation</i> /	443
10.2.3	The Retardation Time /	443
10.2.4	Dynamic Mechanical Behavior of Springs and Dashpots /	445
10.2.5	Molecular Relaxation Processes /	446
10.2.6	Diffusion at Short Times /	449
10.2.7	Relationships among Molecular Parameters /	450
